"Required reading" Read this manual and the Owner's Manual for the engine before using the machine.
Thank you for purchasing the Baroness machine. This manual explains proper handling, adjustment, and inspection of your machine. Prior to use, carefully read this manual to thoroughly understand the contents for safe and correct operation. We hope you will use the machine safely, and take advantage of its best performance.

**Keeping the Owner's Operating Manual**

Keep this Manual in the box located in the rear of the seat.
Read this manual carefully to ensure that you thoroughly understand how to properly operate and maintain this machine, and to avoid causing injury to yourself or others.

The operator is responsible for operating the machine properly and safely.

Do not perform maintenance on the machine other than that described in this manual.

Be sure to also read the operating manuals for the engine, battery, etc.

Maintenance should only be performed by a certified specialist.

If you have any questions concerning maintenance or genuine parts, please contact your local Baroness dealer or Kyoeisha.

When making inquiries about this machine, please specify the machine's model designation and serial number.

When loaning or transferring this machine, please also provide this manual together with the machine.

Kyoeisha Co., Ltd.

Caution

The information described in this manual is subject to change for improvement without prior notice.

When replacing parts, be sure to use genuine Baroness parts or parts designated by Kyoeisha.

Note that the Baroness product warranty may not apply to defects caused by the use of parts from other companies.

Warning Symbols

This manual uses the following warning symbols for handling precautions that are important for your safety.

This symbol indicates the articles regarding “Danger,” “Warning,” or “Caution.” Those articles describe important safety precautions and so read them carefully to understand completely before operating the machine.

Failure to adequately follow these safety precautions may cause an accident.

Danger

This symbol indicates that serious injury or death will occur if the warning is ignored.

Warning

This symbol indicates that serious injury or death may occur if the warning is ignored.

Caution

This symbol indicates that injury or damage to property may occur if the warning is ignored.

Important

This symbol indicates precautions on the mechanism of the machine.
Purpose

This machine is intended for cutting turf grass at golf courses. Do not use this machine in any way other than its intended purpose, and do not modify the machine. Operating this machine for other purposes and modifying it may be very dangerous and may cause damage to the machine. In addition, this machine is not authorized for operation as a special motor vehicle. Do not operate it on public roads.

Failure to adequately follow these safety precautions may cause an accident resulting in injury or death.

**Danger**

This machine is designed to ensure safe operation and has been tested and inspected thoroughly before shipment from the factory. The machine is equipped with safety devices to prevent accidents. However, whether the machine demonstrates its original performance level depends on the manner in which it is operated and handled, as well as the manner in which it is managed on a daily basis. Inappropriate use or management of the machine may result in injury or death. Observe the following safety instructions to ensure safe operation.

### Safe Operating Practices

The following instructions include the ones from CEN standard EN 836: 1997, ISO standard 5395: 1990, and ANSI B71.4-2004.

### Training

1. Read this manual and other training material carefully. Be familiar with the controls, safety signs, and the proper use of the equipment.
2. If the operator or mechanic cannot read English it is the owner's responsibility to explain this manual to them.
3. All operators and mechanics should seek and obtain professional and practical instruction. The owner is responsible for training the users. Such instruction should emphasize:
   - The need for care and concentration when working with ride-on machines.
   - Control of a ride-on machine sliding on a slope will not be regained by the application of the brake.
   - The main reasons for loss of control are:
     - Insufficient wheel grip
     - Being driven too fast
     - Inadequate braking
     - The type of machine is unsuitable for its task
     - Lack of awareness of the effect of ground conditions, especially slopes

### Preparation

1. Evaluate the terrain to determine what accessories and attachments are needed to properly and safely perform the job. Only use accessories and attachments approved by the manufacturer.
2. While operating, always wear substantial footwear, long trousers, hard hat, safety glasses, and ear protection. Long hair, loose clothing, or jewelry may get tangled in moving parts. Do not operate the equipment when barefoot or wearing open sandals.
3. Inspect the area where the equipment is to be used and remove all objects such as rocks, toys and wire which can be thrown by the machine.
4. Exercise care in the handling of fuel.

### Warning

**Warning**—Fuel is highly flammable. Take the following precautions.

1. Store fuel in containers specifically designed for this purpose.
2. Add fuel before starting the engine. Never remove the cap of the fuel tank or add fuel while the engine is running or when the engine is hot.
3. Refuel outdoors only and do not smoke while refueling.
4. If fuel is spilled, do not attempt to start the engine but move the machine away from the area of spillage and avoid creating any source of ignition until petrol vapours have dissipated.
5. Replace all fuel tanks and container caps securely.
Check that operator's presence controls, safety switches and shields are attached and functioning properly. Do not operate unless they are functioning properly.

If the brake operation is faulty or the parking brake lever has noticeable play, be sure to adjust or repair them before operating the machine.

Replace faulty mufflers.

**Operation**

1. Do not operate the engine in a confined space where dangerous carbon monoxide fumes can collect.
2. Only operate in good light, keeping away from holes and hidden hazards.
3. Before attempting to start the engine, disengage all attachments, shift into neutral, and engage the parking brake. Only start engine from the operator’s position. Use seat belts if provided.
4. Remember there is no such thing as a safe slope. Travel on grass slopes requires particular care. To guard against overturning:
   [1] Do not stop or start suddenly when going up or downhill.
   [5] Never operate across the face of the slope, unless the machine is designed for this purpose.
   [6] Never drive the machine on a slope with an angle of gradient that is greater than that specified or in a place where there is a danger of the machine slipping.
5. Never operate the machine with damaged guards, shields, or without safety protective devices in place. Be sure all interlocks are attached, adjusted and functioning properly.
6. Do not change the engine governor settings or overspeed the engine. Operating the engine at excessive speed may increase the hazard of personal injury.

7. Do the following before leaving the operator’s position.
   [1] Stop on level ground.
   [2] Disengage the power take-off and lower the attachments.
   [3] Change into neutral and set the parking brake.
   [4] Stop the engine and remove the key.
8. Disengage the drive to attachments, stop the engine, and remove the ignition key in the following conditions.
   [3] Before making height adjustment unless adjustment can be made from the operator’s position.
   [5] Before checking, cleaning, or working the machine.
   [6] After striking a foreign object or if an abnormal vibration occurs. Inspect the machine for damage and make repairs before restarting and operating the equipment.

9. Keep hands and feet away from the cutting units and the rotating parts.
10. Look behind and down before backing up to be sure of a clear path.
11. Do not carry passengers.
12. Never operate while people, especially children, or pets are nearby.
13. Slow down and use caution when making turns and crossing roads and sidewalks.
14. Stop the blades rotating before crossing surfaces other than grass.
15. Disengage drive to attachments when transporting or not in use.
16. When using any attachments, never direct discharge of material toward bystanders nor allow anyone near the machine while in operation.
17. Do not operate the machine under the influence of alcohol or drugs.

**Safety**

LM281

5. Check that operator's presence controls, safety switches and shields are attached and functioning properly. Do not operate unless they are functioning properly.

6. If the brake operation is faulty or the parking brake lever has noticeable play, be sure to adjust or repair them before operating the machine.

7. Replace faulty mufflers.

**Operation**

1. Do not operate the engine in a confined space where dangerous carbon monoxide fumes can collect.
2. Only operate in good light, keeping away from holes and hidden hazards.
3. Before attempting to start the engine, disengage all attachments, shift into neutral, and engage the parking brake. Only start engine from the operator’s position. Use seat belts if provided.
4. Remember there is no such thing as a safe slope. Travel on grass slopes requires particular care. To guard against overturning:
   [1] Do not stop or start suddenly when going up or downhill.
   [5] Never operate across the face of the slope, unless the machine is designed for this purpose.
   [6] Never drive the machine on a slope with an angle of gradient that is greater than that specified or in a place where there is a danger of the machine slipping.
5. Never operate the machine with damaged guards, shields, or without safety protective devices in place. Be sure all interlocks are attached, adjusted and functioning properly.
6. Do not change the engine governor settings or overspeed the engine. Operating the engine at excessive speed may increase the hazard of personal injury.

7. Do the following before leaving the operator’s position.
   [1] Stop on level ground.
   [2] Disengage the power take-off and lower the attachments.
   [3] Change into neutral and set the parking brake.
   [4] Stop the engine and remove the key.
8. Disengage the drive to attachments, stop the engine, and remove the ignition key in the following conditions.
   [3] Before making height adjustment unless adjustment can be made from the operator’s position.
   [5] Before checking, cleaning, or working the machine.
   [6] After striking a foreign object or if an abnormal vibration occurs. Inspect the machine for damage and make repairs before restarting and operating the equipment.

9. Keep hands and feet away from the cutting units and the rotating parts.
10. Look behind and down before backing up to be sure of a clear path.
11. Do not carry passengers.
12. Never operate while people, especially children, or pets are nearby.
13. Slow down and use caution when making turns and crossing roads and sidewalks.
14. Stop the blades rotating before crossing surfaces other than grass.
15. Disengage drive to attachments when transporting or not in use.
16. When using any attachments, never direct discharge of material toward bystanders nor allow anyone near the machine while in operation.
17. Do not operate the machine under the influence of alcohol or drugs.

**Safety**

LM281

5. Check that operator's presence controls, safety switches and shields are attached and functioning properly. Do not operate unless they are functioning properly.

6. If the brake operation is faulty or the parking brake lever has noticeable play, be sure to adjust or repair them before operating the machine.

7. Replace faulty mufflers.

**Operation**

1. Do not operate the engine in a confined space where dangerous carbon monoxide fumes can collect.
2. Only operate in good light, keeping away from holes and hidden hazards.
3. Before attempting to start the engine, disengage all attachments, shift into neutral, and engage the parking brake. Only start engine from the operator’s position. Use seat belts if provided.
4. Remember there is no such thing as a safe slope. Travel on grass slopes requires particular care. To guard against overturning:
   [1] Do not stop or start suddenly when going up or downhill.
   [5] Never operate across the face of the slope, unless the machine is designed for this purpose.
   [6] Never drive the machine on a slope with an angle of gradient that is greater than that specified or in a place where there is a danger of the machine slipping.
5. Never operate the machine with damaged guards, shields, or without safety protective devices in place. Be sure all interlocks are attached, adjusted and functioning properly.
6. Do not change the engine governor settings or overspeed the engine. Operating the engine at excessive speed may increase the hazard of personal injury.

7. Do the following before leaving the operator’s position.
   [1] Stop on level ground.
   [2] Disengage the power take-off and lower the attachments.
   [3] Change into neutral and set the parking brake.
   [4] Stop the engine and remove the key.
8. Disengage the drive to attachments, stop the engine, and remove the ignition key in the following conditions.
   [3] Before making height adjustment unless adjustment can be made from the operator’s position.
   [5] Before checking, cleaning, or working the machine.
   [6] After striking a foreign object or if an abnormal vibration occurs. Inspect the machine for damage and make repairs before restarting and operating the equipment.

9. Keep hands and feet away from the cutting units and the rotating parts.
10. Look behind and down before backing up to be sure of a clear path.
11. Do not carry passengers.
12. Never operate while people, especially children, or pets are nearby.
13. Slow down and use caution when making turns and crossing roads and sidewalks.
14. Stop the blades rotating before crossing surfaces other than grass.
15. Disengage drive to attachments when transporting or not in use.
16. When using any attachments, never direct discharge of material toward bystanders nor allow anyone near the machine while in operation.
17. Do not operate the machine under the influence of alcohol or drugs.
18. Take care when loading or unloading the machine into a trailer or a truck. Load or unload the machine in a flat and safe place. Before loading or unloading, set the parking brake on the truck or trailer, stop the engine, and chock the wheels. When transporting the machine on a truck or a trailer, set the parking brake, stop the engine, and fasten the machine to the truck with a rope or other suitable restraining device that has sufficient strength. When using a running board, select one with sufficient strength, length, and width and that will not cause the machine to slip.
19. Close the fuel valve before transporting the machine.
20. Use care when approaching blind corners, shrubs, trees, or other objects that may obscure vision.
21. Do not take your eyes off the road ahead. Do not operate the machine with no hands.
22. Reduce the throttle setting during engine run-out and, if the engine is provided with a shut-off valve, turn the fuel off at the conclusion of operation.

**Maintenance and storage**

1. Disengage drives on level ground, lower the attachments, set parking brake, stop engine and remove key from ignition. Wait for all movement to stop before adjusting, cleaning or repairing.
2. When machine is to be parked, stored, or left unattended, lower the cutting units unless a positive mechanical lock is provided.
3. To reduce the fire hazard, keep the engine, silencer/muffler, battery compartment fuel storage area, cutting unit and drives free of grass, leaves, or excessive grease. Clean up oil or fuel spillage.
4. Allow the engine to cool before storing in any enclosure.
5. Only cover the machine with a sheet after hot parts have sufficiently cooled down.
6. Never store the equipment with fuel in the tank inside a building where fumes may reach an open flame or spark.
7. If the engine is provided with a shut-off valve, shut off valve while storing or transporting.
8. Do not store fuel near flames.
9. Never allow untrained personnel to service machine.
10. Allow the engine/muffler to cool before checking/maintenance.
11. Appropriately manage and correctly use the tools necessary for servicing or adjusting the machine.
12. Use jack stands to support components when required.
13. Carefully release pressure from components with stored energy.
14. Be sure to depressurize the hydraulic system before performing maintenance operations on it such as removing hydraulic equipment.
15. Check whether line connectors in the hydraulic system are properly tightened. Before applying hydraulic pressure, check the connections of the hydraulic pressure lines and the condition of the hoses.
16. When checking the hydraulic circuit for pinhole leaks or oil leakage from nozzles, do not use your hands. Use items such as paper or corrugated cardboard to find leakage points. Be extremely careful with high-pressure oil as it may pierce your skin, resulting in an injury. If fluid is injected into the skin it must be surgically removed within a few hours by a doctor familiar with this form of injury or gangrene may result.
17. Disconnect battery before making any repairs. Disconnect the negative terminal first and the positive last. Reconnect positive first and negative last.
18. Make sure that parts such as wires are not touching each other and that their covers have not come off.
19. Use care when checking the cylinders/reels and bed knives.
20. On multi-cylinder/multi-reel machines take care as rotating one cylinder/reel can cause other cylinder/reels to rotate.
21. Keep hands and feet away from moving parts. If possible, do not make adjustments with the engine running.
22. Charge batteries in an open well ventilated area, away from spark and flames. Unplug charger before connecting or disconnecting from battery. Wear protective clothing and use insulated tools.

23. Keep all parts in good working condition and all hardware tightened. Replace all worn or damaged decals.

24. Keep all nuts, bolts and screws tight to be sure the equipment is in safe working condition.

25. Check the grass catcher frequently for wear or deterioration.

26. If the fuel tank has to be drained, do this outdoors.

### Weight
- **1,032 kg** (with ROPS and empty fuel tank)
- **1,047 kg** (with ROPS and empty fuel tank)

### Minimum turning radius
- 277 cm

### Engine
- **Model**: Kubota D1105
- **Type**: Vertical water-cooled 4-cycle diesel engine
- **Total displacement**: 1,123 cm³ (1.123 L)
- **Maximum output**: 18.5 kW (25.2 PS)/3,000 rpm
- **Fuel tank capacity**: Diesel 38.0 dm³ (38.0 L)
- **Fuel consumption**: 289 g/kW·h (rated output)
- **Quantity of engine oil**: 3.0 dm³ (3.0 L)
- **Operating width (Mowing width)**: 180 cm, 212 cm
- **Operating height (Mowing height)**: 19 - 68 mm
- **Drive**: HST full time 4-wheel drive
- **Speed (HST)**:
  - Forward: 0 - 14.4 km/h
  - Reverse: 0 - 8.5 km/h
- **Speed (Mechanical)**: -
- **Efficiency**:
  - 11,520 m²/h (8.0 km/h x operating width x 0.8)
  - 13,568 m²/h (8.0 km/h x operating width x 0.8)
- **Maximum inclination for operation**: 20 degrees
- **Tire size**:
  - Front wheel: 23 x 10.50 - 12 4P
  - Rear wheel: 23 x 8.50 - 12 4P
- **Tire pneumatic pressure**:
  - Front wheel: 120 kPa (1.2 kgf/cm²)
  - Rear wheel: 150 kPa (1.5 kgf/cm²)
- **Battery**: 75D23L

* The factory default maximum engine rpm is 3,100 rpm.
This machine was confirmed to have a continuous A-weighted sound pressure level of 89 dB by measuring identical machines in accordance with the procedure specified in ISO5395-1:2013.

This machine was confirmed to have a sound power level of 103 dB by measuring identical machines in accordance with the procedure specified in directive 2000/14/EC.

This machine was confirmed to transmit a maximum vibration level of 3.81 m/s$^2$ to hands and arms by measuring identical machines in accordance with the procedure specified in ISO5349-1:2001,ISO5349-2:2001.

This machine was confirmed to transmit a maximum vibration level of 0.99 m/s$^2$ to the whole body by measuring identical machines in accordance with the procedure specified in ISO2631-1:1997,ISO2631-2:2003.

About Safety Signs and Instruction Signs

Warning

Safety decals and instruction decals are attached to this machine. Make sure that they are preserved in their entirety. If they are damaged, become dirty, or peel off, replace them with new ones.

Part numbers for decals that need to be replaced are listed in the parts catalog. Order them from a Baroness dealer or Kyoeisha.

Inspection Before Use

Be sure to perform an inspection before you start using the machine so that you will be able to take advantage of its optimum performance for a long period of time.

Reel Cutter (Cutting Cylinder) and Bed Knife (Bottom Blade)

Inspection of Reel Cutter (Cutting Cylinder) and Bed Knife (Bottom Blade)

The reel cutter (cutting cylinder) and bed knife (bottom blade) may become dull due to frequent use, objects crushed during mowing, or damage caused during transportation. Inspect the reel cutter (cutting cylinder) and bed knife (bottom blade), and if necessary, adjust the blade engagement, perform back lapping, or resharpen or replace the reel cutter (cutting cylinder) and the bed knife (bottom blade).

1. Check to see whether or not the edge of the reel cutter (cutting cylinder) and the bed knife (bottom blade) are too blunt to cut.
2. Make sure that the reel cutter (cutting cylinder) and the bed knife (bottom blade) are not cracked.
3. Check to see how much the reel cutter (cutting cylinder) and the bed knife (bottom blade) are worn.
4. Make sure that the reel cutter (cutting cylinder) and the bed knife (bottom blade) have not changed color due to heat from grinding.
5. Check to see whether or not the second edge face remains at the point of reel cutter (cutting cylinder).
6. Make sure that the welding between the reel cutter (cutting cylinder) and the disc has not come off.

Radiator Cover

Inspection of Radiator Cover

1. Make sure that there is no damage to the radiator cover.
2. Make sure that the radiator cover is not contaminated.

Cleaning of Radiator Cover

Important

An unclean radiator cover may cause overheating or damage to the engine. It may also cause malfunction of the hydraulic system.

If the radiator cover has been contaminated with dust, be sure to clean it. After operating the machine in a dusty environment, it is important to remove dust from the cover as soon as possible.

1. Open the radiator cover.
2. Carefully clean the front and back of the radiator cover with water or compressed air.
Radiator

Inspection of Radiator

For details on handling the engine, please refer to the separate Engine Operating Manual.

1. Make sure that there is no damage to the radiator.
2. Make sure that the radiator is not contaminated.

Cleaning of Radiator

For details on handling the engine, please refer to the separate Engine Operating Manual.

Important

An unclean radiator may cause overheating or damage to the engine. It may also cause malfunction of the hydraulic system.

Important

Do not use solid objects, such as a spatula or screwdriver, or high-pressure water to clean the radiator or oil cooler. Otherwise, special fins or tubes may be damaged, possibly resulting in reduced cooling performance or coolant leakage.

If the radiator has been contaminated with dust, be sure to clean it. After operating the machine in a dusty environment, it is important to remove dust as soon as possible.

1. Open the radiator cover.
2. Loosen the knobs on the left and right of the oil cooler, and then tilt the oil cooler.
3. Carefully clean the front and back of the radiator with water or compressed air.

Coolant

Inspection of Coolant

For details on handling the engine, please refer to the separate Engine Operating Manual.

Warning

Do not touch the radiator or coolant during engine operation or right after the engine has been turned off. Due to high temperatures, doing so could cause burns.

Caution

Inspection should take place after the engine has well cooled down.

1. Make sure that the coolant level in the reserve tank is between "Full" and "Low."

![Reserve tank image]
Coolant Supply

For details on handling the engine, please refer to the separate Engine Operating Manual.

**Warning**

Do not touch the radiator or coolant during engine operation or right after the engine has been turned off. Due to high temperatures, doing so could cause burns. After the radiator has well cooled down, open the radiator cap.

**Caution**

Supply coolant after the engine has well cooled down.

**Caution**

The radiator cap is pressurized. If you remove the radiator cap while the engine is overheated, hot steam will burst out, possibly resulting in burns. Make sure that the water temperature and pressure are reduced, and then grab the cap with a thick cloth and gradually open the cap.

**Important**

When you supply coolant, be sure to use clean water, such as tap water. During winter, remove coolant. Alternatively, mix long-life coolant and clean water, and then pour it into the radiator and reserve tank.

### Relationship between concentration of long-life coolant (LLC) and freezing temperature

<table>
<thead>
<tr>
<th>Freezing temperature</th>
<th>LLC concentration (volume %)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Down to -10 °C (14 °F)</td>
<td>20%</td>
</tr>
<tr>
<td>Down to -15 °C (5 °F)</td>
<td>30%</td>
</tr>
<tr>
<td>Down to -20 °C (-4 °F)</td>
<td>35%</td>
</tr>
<tr>
<td>Down to -25 °C (-13 °F)</td>
<td>40%</td>
</tr>
</tbody>
</table>

1. If the coolant level in the reserve tank is lower than the "LOW" mark, open the reserve tank cap and fill the tank with clean water up to the "FULL" mark.

2. If no coolant is in the reserve tank, follow the steps below to fill the tank with clean water.
   1. Open the radiator cap, and then supply clean water up to the opening.
   2. Open the reserve tank cap, and then supply clean water up to the "FULL" mark.
Change of Coolant

For details on handling the engine, please refer to the separate Engine Operating Manual.

⚠️ Warning
When you change the coolant, be sure to drain it into a bowl and discard it in accordance with local laws and regulations.

⚠️ Warning
Do not touch the radiator or coolant during engine operation or right after the engine has been turned off. Due to high temperatures, doing so could cause burns. After the radiator has well cooled down, open the radiator cap.

⚠️ Caution
Change coolant after the engine has well cooled down.

⚠️ Important
When you change coolant, be sure to use clean water, such as tap water. During winter, remove coolant. Alternatively, mix long-life coolant and clean water, and then pour it into the radiator and reserve tank.

For details on changing coolant, please refer to the separate Engine Operating Manual. Coolant quantity, including the reserve tank, is 6.0 dm$^3$ (6.0 L).

Oil cooler

Inspection of Oil Cooler

1. Make sure that there is no damage to the oil cooler.
2. Make sure that the oil cooler is not contaminated.

Cleaning of Oil Cooler

⚠️ Caution
An unclean oil cooler may cause malfunction of the hydraulic system.

⚠️ Important
Do not use solid objects, such as a spatula or screwdriver, or high-pressure water to clean the radiator or oil cooler. Otherwise, special fins or tubes may be damaged, possibly resulting in reduced cooling performance or coolant leakage.

If the oil cooler has been contaminated with dust, be sure to clean it. After operating the machine in a dusty environment, it is important to remove dust as soon as possible.

1. Open the radiator cover.
2. Loosen the knobs on the left and right of the oil cooler, and then tilt the oil cooler.

3. Carefully clean the front and back of the oil cooler with water or compressed air.
Hydraulic Oil

Inspection of Hydraulic Oil

1. Raise the mower units and maintain that position on a level surface.
2. Make sure that the oil level is at the middle of the oil gauge.
3. Check underneath the machine for oil leakage.

Hydraulic Oil Supply

<table>
<thead>
<tr>
<th>Important</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not mix different types of oil.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Important</th>
</tr>
</thead>
<tbody>
<tr>
<td>Use Shell Tellus S2M46 (or equivalent) as hydraulic oil.</td>
</tr>
</tbody>
</table>

1. If the oil level is low, open the tank cap and supply oil.
2. Tighten the tank cap securely.
3. Start the engine, raise and lower the mower units, and turn the steering wheel left and right. Move forward and reverse repeatedly several times.
4. Raise the mower units and maintain that position on a level surface, and then check to see if the oil level is at the middle of the oil gauge. If necessary, supply oil.
5. Check underneath the machine for oil leakage.
Change of Hydraulic Oil

⚠️ Warning
When you change the hydraulic oil, be sure to drain it into a bowl and discard it in accordance with local laws and regulations.

⚠️ Caution
If the oil emulsifies or if it becomes even slightly less transparent, change the oil immediately.

⚠️ Caution
Be careful with hot oil, which could cause burns if it contacts your skin.

❗️ Important
Use Shell Tellus S2M46 (or equivalent) as hydraulic oil.

1. Follow the steps below to remove the old oil.
   [1] Start and run the engine to warm up the oil.
   [2] On a level surface, lower the mower units, and then stop the engine.
   [3] Remove the drain plug of the hydraulic tank, and then drain the old oil into a container.
   [4] Wind new sealing tape on the drain plug, and then attach it to the hydraulic tank.

2. Open the tank cap, and then pour new oil from the fill port until the oil level reaches the middle of the oil gauge on the hydraulic tank. The hydraulic tank capacity is approximately 24.0 dm³ (24.0 L).

3. Tighten the tank cap securely.

4. Start the engine, raise and lower the mower units, and turn the steering wheel left and right. Move forward and reverse repeatedly several times.

5. Raise the mower units and maintain that position on a level surface, and then check to see if the oil level is at the middle of the oil gauge. If necessary, supply oil.

6. Check underneath the machine for oil leakage.
**Air Cleaner**

**Inspection of Air Cleaner**

For details on handling the engine, please refer to the separate Engine Operating Manual.

The air cleaner is a component that removes dirt from the intake air to prevent wear of the cylinder liners and piston rings so that the engine will always operate smoothly.

A contaminated air cleaner element may cause malfunction of the engine.

1. Make sure that there is no damage to the air cleaner.
2. Make sure that the air cleaner element is not contaminated.

[2] While paying close attention not to damage the air cleaner element, tap a solid portion of the air cleaner element or blow compressed air from its inside to remove dust and dirt. If the air cleaner element is extremely contaminated, replace it with a new one.

[3] Attach the air cleaner element to the air cleaner body.

[4] Re-place the air cleaner cap, and then fix it securely using the clips.

---

**Change of Air Cleaner**

For details on handling the engine, please refer to the separate Engine Operating Manual.

A contaminated air cleaner element may cause malfunction of the engine.

To maximize the life of the engine, replace the air cleaner element at the appropriate times.

1. The timing for replacing the air cleaner element is described below.

[1] Replace the air cleaner element in accordance with the Maintenance Schedule.

[2] If it is significantly contaminated, replace it, even if the hours of operation do not exceed the specified time.

[3] Even if the hours of operation do not exceed the specified time, change it at least once per year.

2. Replace the air cleaner element in the same manner as cleaning the air cleaner.

(See “Cleaning of Air Cleaner” (Page 4-8).)

---

**Cleaning of Air Cleaner**

For details on handling the engine, please refer to the Owner's Manual for the engine.

To maximize the life of the engine, clean the air cleaner properly.

1. Follow the steps below to clean the air cleaner.

[1] Remove the clips from the two locations, remove the air cleaner cap, and then remove the air cleaner element.

[2] While paying close attention not to damage the air cleaner element, tap a solid portion of the air cleaner element or blow compressed air from its inside to remove dust and dirt. If the air cleaner element is extremely contaminated, replace it with a new one.

[3] Attach the air cleaner element to the air cleaner body.

[4] Re-place the air cleaner cap, and then fix it securely using the clips.

---

**Cleaning of Air Cleaner**

<td>Air cleaner cap</td>
</tr>
<tr>
<td>4</td>
<td>Air cleaner body</td>
</tr>
</tbody>
</table>

---

**Change of Air Cleaner**

For details on handling the engine, please refer to the separate Engine Operating Manual.

A contaminated air cleaner element may cause malfunction of the engine.

To maximize the life of the engine, replace the air cleaner element at the appropriate times.

1. The timing for replacing the air cleaner element is described below.

[1] Replace the air cleaner element in accordance with the Maintenance Schedule.

[2] If it is significantly contaminated, replace it, even if the hours of operation do not exceed the specified time.

[3] Even if the hours of operation do not exceed the specified time, change it at least once per year.

2. Replace the air cleaner element in the same manner as cleaning the air cleaner.

(See “Cleaning of Air Cleaner” (Page 4-8).)
Battery

Inspection of Battery

For details on handling the battery, please refer to the separate Battery Instruction Manual.

**Danger**

Keep fire away while inspecting or charging the battery. The battery may explode.

**Warning**

Do not allow the battery fluid level to become lower than the LOWER LEVEL (minimum fluid level line). The battery may explode if it is used or charged while the battery fluid level is at the LOWER LEVEL (minimum fluid level line).

1. Clean the areas around the battery fluid level lines using a cloth dampened with water.
2. Make sure that the battery fluid level is between the UPPER LEVEL (maximum fluid level line) and the LOWER LEVEL (minimum fluid level line).

Supply of Battery Fluid

For details on handling the battery, please refer to the separate Battery Instruction Manual.

**Danger**

Be careful not to let your skin, eyes or clothes, etc., come into contact with the battery fluid or accidentally swallow the fluid. Should your skin or clothes come into contact with the battery fluid, immediately wash them away with water.

**Warning**

When you supply battery fluid, wear protective garments and safety glasses, etc.

**Caution**

Implement after the engine and muffler etc. have well cooled down. Otherwise you may get burned.

1. If the battery fluid level is lower than halfway between the UPPER LEVEL (maximum line) and LOWER LEVEL (minimum line), add purified water up to the UPPER LEVEL (maximum line).
### Tire

**Inspection of Tires**

1. Check the pneumatic pressure of the tires.
2. Make sure that there are no cracks, damage or abnormal wear on the tires.

<table>
<thead>
<tr>
<th>Tire size</th>
<th>Pneumatic pressure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Front wheel (23 x 10.50 - 12 4P)</td>
<td>120 kPa (1.2 kgf/cm²)</td>
</tr>
<tr>
<td>Rear wheel (23 x 8.50 - 12 4P)</td>
<td>150 kPa (1.5 kgf/cm²)</td>
</tr>
</tbody>
</table>

### Brake

**Inspection of Brake**

While traveling, depress the brake pedal firmly to make sure that the brake is applied effectively.

**Inspection of Parking Brake**

1. Make sure that the brake is not applied any longer when you pull the parking brake lever.
2. Make sure that the brake is not applied even slightly when you press the push button to release the parking brake lever.

### Belt

**Inspection of Belt**

- **Caution**
  
  The engine must be stopped when the belt is inspected.

- **Caution**
  
  If you have removed the cover during inspection, make sure that you replace it in the original position securely. If the cover remains removed, the operator may come in contact with the rotating objects or belt, possibly resulting in injuries.

- **Important**
  
  A slacking or damaged belt or damaged fan may cause overheating or lack of a battery charge.

1. Press the middle of the belt with your finger to check the belt tension.

### Around the Engine

**Inspection of Engine-Associated Parts**

For details on handling the engine, please refer to the separate Engine Operating Manual.

1. Check the fuel system parts for loosened or cracked joints and leakage. Replace the parts if necessary.
2. Blow compressed air to clean any grass or flammable materials that may be attached inside or around the muffler.

### Engine Oil

**Inspection of Engine Oil**

For details on handling the engine, please refer to the Owner’s Manual for the engine.

- **Important**
  
  Securely tighten the oil level gauge and oil filler cap.

1. Stop the engine, wait for 10 to 20 minutes for the engine to cool down, then check the oil level.
2. Position the machine so that the engine will be level, then insert the oil gauge all the way to check the oil level.
3. The appropriate oil level should be between the upper and lower limit lines on the gauge.

**Inspection of Engine Oil_002**

1. Oil gauge
2. Upper limit
3. Lower limit

**Supply of Engine Oil**

For details on handling the engine, please refer to the Owner's Manual for the engine.

**Important**

Do not supply too much engine oil. Otherwise, the engine may be damaged.

**Important**

Do not mix different types of engine oil.

**Important**

Be sure to use engine oil that is classified as API Service Grade CF or higher, with an SAE Viscosity that is appropriate for the operating environment (ambient temperature).

**Important**

Securely tighten the oil level gauge and oil filler cap.

1. Engine oil is supplied through the oil filling port. Remove the oil filler cap, and then supply new engine oil until the oil reaches a level in between the upper and lower limit lines on the oil level gauge.

2. Securely install the oil filler cap.

3. It will take a while for the supplied engine oil to descend into the oil pan. Check the oil level again 10 to 20 minutes after supplying the oil.
Change of Engine Oil

For details on handling the engine, please refer to the Owner's Manual for the engine.

**Warning**

When you change the engine oil, be sure to drain it into a bowl and discard it in accordance with local laws and regulations.

**Caution**

Be careful with hot oil, which could cause burns if it contacts your skin.

**Important**

Be sure to use engine oil that is classified as API Service Grade CF or higher, with an SAE Viscosity that is appropriate for the operating environment (ambient temperature).

**Important**

Securely tighten the oil level gauge and oil filler cap.

Change the engine oil more frequently if the engine oil is contaminated, and especially if you use the machine in dusty areas or operate the engine at high loads or in high temperatures.

1. Follow the steps below to remove the old engine oil.
   1. Start and run the engine to warm up the engine oil.
   2. On a level surface, remove the drain plug, and then drain the old engine oil into a container.

2. Remove the oil filler cap, and then supply new engine oil until the oil reaches a level in between the upper and lower limit lines on the oil level gauge.

3. Securely install the oil filler cap.

4. It will take a while for the supplied engine oil to descend into the oil pan. Check the oil level again 10 to 20 minutes after supplying the oil.
Fuel

Inspection of Fuel Quantity

With the machine on a level surface, observe the fuel gauge in the operation panel to check the fuel level.

![Fuel Gauge Image]

Fuel Supply

**Danger**

Do not supply fuel above the middle (marked in red) of the fuel gauge. If you supply too much fuel, it might overflow from the tank cap when you travel or work on a slope.

**Warning**

Keep fire away while refueling. Do not smoke while refueling.

**Caution**

Supply fuel before starting the engine. Never remove the tank cap or supply fuel while the engine is running. When opening the tank cap, wait at least 1 minute after stopping the engine, and then slowly open the cap to release the pressure in the tank. Opening the tank cap quickly may cause fuel to burst out.

If the fuel gauge located in the operation panel indicates a level close to E (EMPTY), supply fuel (diesel) at your earliest convenience.

![Fuel Supply Diagram]

Refuel up to the middle (marked in red) of the fuel gauge. The fuel tank capacity is approximately 38.0 dm³ (38.0 L).

**Oil Leakage**

Inspection of Oil Leakage

**Caution**

When performing maintenance on the hydraulic system, lower the mower units.

After approximately 50 hours of operation, some tightened portions may be loosened and oil may leak. Be sure to retighten the parts. Check the bottom of the machine for oil leakage.
Tightening torques

Standard tightening torques

Bolts and Nuts

**Important**

A number of bolts are used in each part of this machine. Be sure to re-tighten the bolts and nuts, because they may be loosened at the earlier stage of the use.

As to the bolts and nuts without any special instruction, tighten them in appropriate tightening torque with proper tool.

Too much tightening may cause the looseness or damage of the screw.

The strength of tightening is determined by types of screws, strength, the friction of thread face or base face and others.

The table below is for the galvanized or parkerized bolts.

In case that the strength of internal thread is weak, it is not applied.

Do not use rusty or sand attached "screw."

Otherwise, it may cause insufficient tightening even if you apply the specified tightening torque.

The friction of the screw face becomes higher and the tightening torque is canceled out by the friction, therefore sufficient tightening cannot be applied.

If "screw" is wet by water or oil, do not tighten it with normal tightening torque.

If the screw is wet, the torque coefficient will get smaller and it may result in too much tightening.

Too much tightening may cause looseness by the screw stretched or result in damage.

Do not use a bolt experienced too much burden.

Using the impact wrench requires the skill.

Do exercise as much as possible for steady tightening.

</tbody>
</table>

Since it may be difficult to tighten bolts and nuts in the upper front left area of the engine, the strength category should be 4.8 torque. (See "Standard tightening torques" (Page 4-14).)
Adjustment Before Operating

Adjustment of Seat

Use the seat adjustment lever to adjust the seat back and forth.
Adjust the position according to the operator’s body size.
The adjustment lever is located beneath the front part of the seat.

Adjustment of Blade Engagement

⚠️ Caution

Before cutting newspaper as a test, be sure to stop the engine and wear gloves to protect your hands.
Pay attention not to let the reel cutter (cutting cylinder) catch your gloves. Otherwise, you may injure your hand or fingers.

⚠️ Caution

Before adjusting the blade engagement, be sure to set the reel rotation/stop switching lever for the reel motor (attached to the mower unit) to the "Stop" position.

With the cutter adjustment nut, adjust the engagement between the reel cutter (cutting cylinder) and the bed knife (bottom blade) so that newspaper (two to three sheets) will be cut by the edge of both blades when the blades in their entirety come slightly into contact with each other.

Insert two or three strips of newspaper into the space between the reel cutter (cutting cylinder) and the bed knife (bottom blade) at an angle of 90 degrees. Then, rotate the reel cutter (cutting cylinder) counter-clockwise (when you face the mower unit from the left) to check the sharpness of the blades.

Check the sharpness of the entire range (three or four points from left edge to right) of the reel cutter (cutting cylinder).

1. If a gap is created between edges:
   - Loosen (rotate counter-clockwise) the cutter adjustment nut to apply more contact pressure between the reel cutter (cutting cylinder) and the bed knife (bottom blade).

2. If the reel cutter (cutting cylinder) is too tight to turn:
   - Tighten (rotate clockwise) the cutter adjustment nut to reduce the contact pressure between the reel cutter (cutting cylinder) and the bed knife (bottom blade).

3. If the blades still cannot cut well:
   - Perform back lapping of the reel cutter (cutting cylinder).
Adjustment of Cutting Height

Roller (Roller Type)

Adjust the cutting height to fit your cutting work.
You can adjust the front roller in four stages.

(10~22mm) (20~30mm) (28~40mm) (38~60mm)

Attach the front roller in a position within the range of cutting height that suits your work requirements.

1. To increase cutting height:
   [1] Loosen cutting height adjustment nut A, tighten cutting height adjustment nut B, then lower the rear roller.
   [2] Use the cutting height gauge to determine the position, then tighten cutting height adjustment nut A securely.

2. To decrease cutting height:
   [1] Loosen cutting height adjustment nut B, tighten cutting height adjustment nut A, then raise the rear roller.
   [2] Use the cutting height gauge to determine the position, then tighten cutting height adjustment nut B securely.
Adjustment Before Operating

**Front Wheel Type**

Adjust the cutting height to fit your cutting work. You can adjust the wheel to one of four levels.

(40~68mm) (33~47mm) (26~40mm) (19~33mm)

Attach the wheel in a position within the range of cutting height that suits your work requirements.

1. To increase cutting height:
   [1] Loosen cutting height adjustment nut A, tighten cutting height adjustment nut B, then lower the rear roller.
   [2] Use the cutting height gauge to determine the position, then tighten cutting height adjustment nut A securely.

2. To decrease cutting height:
   [1] Loosen cutting height adjustment nut B, tighten cutting height adjustment nut A, then raise the rear roller.
   [2] Use the cutting height gauge to determine the position, then tighten cutting height adjustment nut B securely.
Adjustment of Cutter Adjustment Spring

If the diameter of the reel cutter (cutting cylinder) becomes smaller, adjust the cutter adjustment spring.
1. Adjust the blade engagement.
2. Loosen the pipe with cutter adjusting screw, and then adjust the length of the spring coil to approximately 40 mm (1.575 in.).

<table>
<thead>
<tr>
<th></th>
<th>Lift arm spring</th>

<td></td>
<td></td>
</tr>
<tr>
<td>3</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Adjustment of Lift Arm Spring

Important
Adjust the spring if the front wheels slip on an ascending slope.

1. Raise the mower units.
2. Loosen lock nut A, then tighten lock nut B to adjust the spring.
3. Perform the same procedure for both left and right.
   Make an adjustment so that the lift arm spring will be compressed evenly.
Adjustment of Reel Cover

Note:
Depending on the specifications, this function may not be available.
The angle of the reel cover can be adjusted.
1. Pull the right and left knobs securing the reel cover to release it.
2. Select the hold position of the cover adjustment plate and secure the reel cover.

Adjustment of CR Brush

Note:
Depending on the specifications, this function may not be available.

**Caution**
Pressing the brush against the roller too tightly could cause the belt to slip or break.

**Important**
CR brush prevents clippings etc. from adherence to the rear roller owing to rotating brush.

1. Loosen the bolts and nuts attached to the both ends of CR brush.
2. Securely tighten the bolts and nuts loosened in step 1 as the gap between the brush and rear roller is adjusted to between 0 and 1 mm.
**Warning**

Before starting the engine, make sure that there are no other people or obstacles around the machine.

**Important**

Starter operation must take 15 seconds or less. If the engine does not start, stop using the battery for 30 to 60 seconds to avoid exhausting the battery.

1. Open the fuel cock. The fuel cock is located by the side of the fuel tank.

2. Sit on the seat.
3. Make sure that you have depressed the brake pedal and applied the parking brake.
4. Shift the reel rotation lever to the "Stop" position.
5. Make sure that the traveling pedal is in the neutral position.
6. From the low-speed position, move the throttle lever halfway toward the high-speed position.

**Important**

The thermo-start lamp turns off at the specified time. However, the lamp turning off is not related to the glow plug generating heat. If the ignition key is left in the "GLOW" position after the lamp is turned off, the plug will still generate heat. The thermo-start lamp will stay illuminated for five seconds.

7. Switch the ignition key to the "GLOW" position.
8. Make sure that the glow plug is generating heat and the thermo-start lamp is turned on.

**Caution**

Quickly returning the ignition key from the "START" position to the "ON" position may result in damage to the machine.

9. After the thermo-start lamp turns off, immediately set the ignition key to the "START" position.
When the starter starts rotating and the engine starts, return the ignition key to the "ON" position slowly.

Procedure to Start Engine

Make sure that the charge lamp and engine oil pressure lamp turn off. If they do not turn off, stop the engine and inspect the machine.

Move the throttle lever to the low-speed position and let the engine warm up for 1 to 2 minutes.

Gradually move the throttle lever toward the high-speed position.

Procedure to Stop Engine

1. Set the traveling pedal to the neutral position.
2. Depress the brake pedal, and then apply the parking brake lever.
3. Shift the reel rotation lever to the "Stop" position.
4. Move the throttle lever to the low-speed position and let the engine idle for 1 to 2 minutes.
5. Switch the ignition key to the "OFF" position.
6. Make sure that the engine has stopped.
7. Remove the ignition key.
8. Leave the driver's seat.
9. Close the fuel cock.
   The fuel cock is located by the side of the fuel tank.

Safety Mechanisms

This machine features a safety device for starting/stopping the engine.

1. As for starting the engine, the safety device prevents the engine from starting unless it meets each of the following four conditions.
   - An operator is sitting on the seat.
   - The parking brake is applied.
   - The reel rotation lever is shifted to the "Stop" position.
   - The traveling pedal is set to the neutral position.

2. The safety device will be activated and will stop the engine under any of the following conditions:
   - The operator leaves the seat without applying the parking brake.
   - The operator leaves the seat while the reel cutter (cutting cylinder) is positively rotating.
   - The traveling pedal is moved when the operator leaves the seat while the parking brake is applied.

Warning Mechanisms

This machine features a warning mechanism for overheating.

1. If water temperature inside the engine exceeds 105 degrees Celsius, a buzzer will sound. (intermittent tone)
**Operation of Each Section**

**Precautions for Operating the Machine**

⚠️ **Caution**
Under any circumstances drive the machine at such a speed that you can stop it immediately for emergencies.

**Cautions for when You Leave the Machine**

⚠️ **Caution**
If the brakes are not sufficiently effective, use the wheel stoppers to secure the machine.

**Operation Decals**

Decal, reel stop
It illustrates stop of the reel cutter (cutting cylinder).

10. K4203001300
Decal, reel rotation
It illustrates rotate of the reel cutter (cutting cylinder).
Light Switch

**Warning**
The lights provide auxiliary lighting. Do not travel or operate the machine at night or under poor visibility.

**Note:**
Depending on the specifications, this function may not be available.
The light switch is located below the left side of the meter panel.
Flip the switch up to turn on the light, and down to turn off the light.

The lights will not turn on when the ignition key is switched to the "OFF" position.

---

Throttle Lever

The throttle lever is located to the left of the driver’s seat and enables you to adjust the engine rpm.
Moving the throttle lever toward the high-speed position increases the engine rpm and moving it toward the low-speed position decreases the rpm.

**Note:**
The factory default engine rpm (maximum) is set to 3,100 rpm.

<p>| | |</p>

</table>
Mower Unit Up/Down Lever

⚠️ Caution
Before raising or lowering the mower units, make sure that there are no people around the machine.

⚠️ Caution
Be careful since shifting the mower unit up/down lever to the "DOWN" position lowers the mower units, even while the engine is stopped.

⚠️ Caution
Before operating the mower unit up/down lever, be sure to set the stop valve to the "Open" position.

The mower unit up/down lever is located on the right side of the driver's seat and raises or lowers the mower units. Shift the lever to the "DOWN" position to lower all mower units, and shift it to the "UP" position to raise all mower units.

Stop Valve

⚠️ Caution
When you move the machine, or if you stop the engine with the mower units raised, be sure to set the stop valve to the "Stop" position.

The stop valve is located underneath the right side of the driver's seat. This valve prevents the raised mower units #1, #2 and #3 from falling.

Note:
When the mower units are raised, the reels stop rotating, even if the reel rotation lever is set to "FORWARD".
**Reel Rotation Lever**

**Caution**

The reel rotation lever must be shifted to the appropriate position just before you start cutting work or back lapping. In all other cases, it must be returned to the neutral position.

The reel rotation lever is located on the right side of the driver's seat and operates rotation of the reel cutters (cutting cylinders) of the mower units. If you shift the reel rotation lever to the "FORWARD" position, the reel cutters (cutting cylinders) on all mower units will rotate forward for cutting work. If you shift the reel rotation lever to "REVERSE," the reel cutters (cutting cylinders) will rotate in reverse for back lapping.

**Reel Rotation Lever Stopper**

**Caution**

Before you start cutting work, make sure that the stopper knob is tightened.

The reel rotation lever stopper is located on the right side of the driver's seat. It prevents a false operation of the reel rotation lever. Except for during back lapping operations, be sure to shift the stopper knob to the "FOR MOWING" position, then tighten the knob.
**Reel Rotation/Stop Switching Lever**

**Caution**

Before operating the reel rotation/stop switching lever, be sure to shift the reel rotation lever to the "Stop" position.

The reel rotation/stop switching lever is located on the reel motor attached to each mower unit. It is used during cutting and back lapping. You must shift only the lever(s) for the mower unit(s) that you plan to use for cutting or back lapping to the "Rotate" position. Leave the lever(s) for other mower units in the "Stop" position.

**Traveling Pedal**

**Warning**

This machine is not authorized as a special motor vehicle. Do not drive it on public roads.

The traveling pedal is located in the right foot area. When depressed forward, the machine travels forward. When depressed backward, the machine travels in reverse.

**Brake Pedal**

The brake pedal is located in the left foot area. To stop the machine, depress the brake pedal all the way firmly.
Parking Brake Lever

⚠️ Caution
Be sure to release the parking brake before driving. It may result in the brakes or hydraulic system malfunction.

⚠️ Caution
Never park the machine on a slope.

The parking brake lever is located to the left of the driver’s seat. To park the machine, depress the brake pedal, and pull the parking brake lever completely. To release the parking brake, press the push button while lowering the parking brake lever all the way to its resting position.

Hood

⚠️ Caution
Do not open the hood in strong winds.

⚠️ Caution
Be careful not to pinch your fingers when you open or close the hood.

1. Unlock the rubber catch, then lift up the hood.
2. Hook the hood support rod to the latch inside the hood. Make sure that the hood will not close, then release your hands.

3. To close the hood, release the hood support rod from the latch, then lower the hood slowly.
4. Lock the rubber catch securely.
Underseat Cover

Caution

Be careful not to pinch your fingers when you open or close the underseat cover.

1. Bring the seat to the most front position.
2. Remove two bolts located on the rear of the seat.

3. Bring the seat to the backmost position.
4. Lift the seat.
5. Securely support the underseat cover with the seat support rod.

Instruments

Instruments on the Operation Panel

1. Water temperature gauge
2. Fuel gauge
3. Pilot lamps (charge lamp, thermo-start lamp, oil pressure lamp)
4. Angle meter

Hour meter

The hour meter is located on the rear right side of the driver's seat and indicates the total operation time of the engine. Every six minutes of engine operation will increase the number at the first digit (black number on a white background) by one. Every one hour of engine operation will increase the number at the next digit (white number on a black background) by one.

1/10 digit: Black number on white background
Hour digits: White number on black background

Instruments on the Operation Panel_001

Underseat Cover_001

1. Bolt

Underseat Cover_002

1. Seat
2. Seat support rod
A. Step 1
B. Step 2

Hour Meter_001

1. 1/10 digit
2. Hour digits
Water Temperature Gauge

The water temperature gauge is located in the operation panel. This instrument indicates the water temperature inside the engine. If the water temperature gauge indicates a level close to "H" during operation, the machine is overheated. Remove the load from the engine, idle the machine for five minutes, stop the engine, and then inspect the machine and perform any necessary maintenance. If the water temperature exceeds 105 degrees Celsius, a buzzer will sound. (Intermittent tone)

Fuel Gauge

The fuel gauge is located in the operation panel. This instrument indicates the quantity of fuel inside the fuel tank.

Pilot Lamps

Charge Lamp

The charge lamp is the left pilot lamp located in the operation panel. It turns on when the ignition key is set to the "ON" position before the engine starts. It turns off when the engine starts and the alternator starts operating properly. If this lamp illuminates while you are operating the machine, stop the engine immediately, and then inspect the machine and perform any necessary maintenance.
Thermo-start Lamp

The thermo-start lamp is the middle pilot lamp located in the operation panel. When the ignition key is set to the "GLOW" position, it illuminates as the glow plug generates heat. Illumination of the thermo-start lamp is controlled by the glow lamp timer, and the lamp is turned off after a specified amount of time passes. The duration of illumination indicates an approximate period of time required for warm-up, and has been fixed at five seconds.

Oil Pressure Lamp

The oil pressure lamp is the right pilot lamp located in the operation panel. It turns on when the ignition key is set to the "ON" position before the engine starts. It turns off when the engine starts and engine oil pressure is generated properly. If this lamp illuminates while you are operating the machine, stop the engine immediately, and then inspect the machine and perform any necessary maintenance.

Overheat Warning Buzzer

If the water temperature inside the engine exceeds 105 degrees Celsius, a buzzer will sound. (intermittent tone) Remove the load from the engine, idle the machine for five minutes, stop the engine, and then inspect the machine and perform any necessary maintenance.

Angle Meter

Note: Depending on the specifications, this function may not be available. The angle meter is located in the operation panel. This instrument indicates the angle of the machine position.
Travel of Machine

Traveling Procedure

1. Start the engine. (See "Procedure to Start Engine" (Page 4-22).)
2. Raise all mower units, and set the anti-falling stop valve to the "Stop" position.
3. Depress the brake pedal, and while pressing the push button, return the parking brake lever to its resting position.

4. Slowly depress the traveling pedal.
5. The machine will start to move.

Towing the Machine

If the machine does not travel due to engine trouble, etc., you can move it in the following ways:

**Caution**
Do not touch the unload valve except when towing the machine.

**Caution**
When towing the machine, travel at a speed no more than 3.0 km/h.
In addition, do not tow the machine for more than 3 minutes.
If the towing speed is too fast or the machine is towed too much, the pump or motor will be damaged.

**Caution**
Before restarting the engine, be sure to close the unload valve.

1. Stop the engine. (See "Procedure to Stop Engine" (Page 4-23).)
2. Apply the parking brake and chock the wheels.
3. Remove the rear center cover, and then open the unload valve under the seat.

4. Open the unload valve located on the rear frame.

5. While pressing the push button, release the parking brake lever and remove the wheel stopper.
6. Tow the machine slowly.

Important
Before towing, be sure to open the unload valves in two locations.
Opening and Closing the Unload Valve

**Caution**

Unless you plan to tow the machine, tighten the needle valve of the unload valve securely and tighten the lock nut firmly.

**Important**

Do not rotate the needle valve of the unload valve more than once.

1. Loosen the lock nut.
2. Loosen the needle valve (located in the center) to open the unload valve.

---

**Cutting Work**

**Cutting Operation**

**Warning**

Do NOT start to move or stop the machine abruptly. To do so is very dangerous. In addition, it may damage the hydraulic system or result in oil leakage.

**Caution**

Cutting work must be performed at an appropriate speed for the site and location. When cutting bumpy surfaces, keep the engine rpm steady, and slow down the cutting speed.

**Caution**

Reel rotation will be turned on or off based on the sensor-detected position of the mower units. Please note that if you stop operating the mower unit up/down lever before the mower units are raised completely, reel rotation may not stop.

1. Shift the reel rotation/stop switching levers of all mower units to the "Rotate" position.
2. Start the engine. (See "Procedure to Start Engine" (Page 4-22).)
3. Raise all mower units, and set the anti-falling stop valve to the "Stop" position.
4. Depress the brake pedal, and while pressing the push button, return the parking brake lever to its resting position.
5. Increase the engine speed to the maximum 3100 rpm by moving the throttle lever toward the high-speed position.
6. Right before starting cutting work, set the anti-falling stop valve to the "Open" position.
7. Shift the mower unit up/down lever to the "DOWN" position to lower the mower units.
8. Shift the reel rotation lever to "FORWARD" to rotate the reel cutters (cutting cylinders) for all mower units in cutting (positive) motion.
9. Depress the traveling pedal to start cutting work.
Note:
During the work, the reel cutters (cutting cylinders) will rotate or stop in sync with the up and down motion of the mower units.

Transporting

Transporting Procedure

When loading the machine into a trailer or a truck to transport it, drive the machine in reverse. When unloading, drive the machine forward.
If the roof is installed on the machine, remove it.
The roof may be damaged by wind pressure.

Maintenance Precautions

First, learn well the maintenance operations you plan to perform.

Use tools appropriate for each maintenance operation.

For the safe and best performance of your machine, use Baroness genuine parts for replacement and accessories. Please note that our product warranty may be void if you use non-genuine parts for replacement or accessories.
### Maintenance Schedule

**Warning**

When replacing a tire or beginning any other maintenance or repairs, be sure to chock the wheels to prevent the machine from moving. Before jacking up the machine, park it on a hard, flat surface such as a concrete floor and remove any obstacles that could prevent you from performing the work safely. When necessary, use an appropriate chain block, hoist, or jack. Support the machine securely with jack stands or appropriate blocks. Failure to do so may cause the machine to move or fall, resulting in injury or death.

Use the jack-up points identified in this manual when jacking up the machine. Only place a jack under the jack-up points specified. Placing a jack at any other point could result in damage to the frame or other parts.

**Jack-up Points**

1. **Front right frame**
2. **Front left frame**
3. **Rear right pivot**
4. **Rear left pivot**
5. **Rear center frame**
4. Rear left pivot

5. Rear center frame

Jacking up the machine
Greasing

About Greasing
Since there may be adhesion or damage due to lack of grease on moving parts, they must be greased.
Add urea-based No. 2 grease in accordance with the Maintenance Schedule.
Other locations where the specified grease or lubricant is used are indicated in "Greasing Points".
Add grease using the specified grease or lubricant.

Greasing Points
Grease nipples are installed in the following locations.
Add grease every 50 hours of operation.

<table>
<thead>
<tr>
<th>Location</th>
<th>No. of greasing points</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 Front roller</td>

</tr>
</tbody>
</table>

1. Front roller
There is one greasing point each on the left and right of each mower unit.

2. Rear roller
There is one greasing point each on the left and right of each mower unit.
3. Reel housing
There is one greasing point on each mower unit.

4. Mower frame fulcrum
There is one greasing point on each mower unit.

5. Lift arm fulcrum
There is one greasing point on each mower unit.

6. Idle lever fulcrum
Jack up the machine and apply grease. Middle between the rear wheels

7. Pivot
Mower unit #2 and #3
8. Piston pump

9. Traveling pedal fulcrum

10. Traveling pedal shaft fulcrum

11. Brake lever shaft
   There is one greasing point each in the left and right brake areas.
Back Lapping of Reel Cutter (Cutting Cylinder)

Back lapping is work similar to sharpening a cooking knife. If the edges of the reel cutter (cutting cylinder) and the bed knife (bottom blade) become blunt and make cutting difficult, both the reel cutter (cutting cylinder) and the bed knife (bottom blade) should be simultaneously sharpened by reversing the reel cutter (cutting cylinder) with an abrasive paste applied.

However, back lapping is a temporary measure and would not restore the sharpness completely.

If the edges of the reel cutter (cutting cylinder) and the bed knife (bottom blade) become blunt and make cutting difficult, follow the steps below to perform back lapping.

Caution
Both the reel cutter (cutting cylinder) and the bed knife (bottom blade) are edged tools. Handle them carefully, since they could cut your hands or legs.

Caution
Be careful not to inhale exhaust gas during back lapping.

Caution
During back lapping, the reel cutter (cutting cylinder) rotates. Keep hands and feet away from moving parts.

Caution
Do not perform back lapping with any other persons.

1. Have the following items ready: Strips of newspaper, Abrasive [Back lapping powder mixed with oil; or gel compound (Baroness genuine abrasive)], Brush.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Newspaper</td>
</tr>
<tr>
<td>2</td>
<td>Back lapping powder</td>
</tr>
<tr>
<td>3</td>
<td>Gel compound</td>
</tr>
<tr>
<td>4</td>
<td>Brush</td>
</tr>
</tbody>
</table>

Note:
The mixing ratio for the abrasive, in volume, is one part back lapping powder (#150 - #200) to three or four parts oil.
Caution

Before cutting newspaper as a test, be sure to stop the engine and wear gloves to protect your hands. Pay attention not to let the reel cutter (cutting cylinder) catch your gloves. Otherwise, you may injure your hand or fingers.

Caution

Before adjusting the blade engagement, be sure to set the reel rotation/stop switching lever for the reel motor (attached to the mower unit) to the "Stop" position.

Important

For checking the sharpness of the blade, adjust the blade engagement after cutting grass.

2. Insert two or three strips of newspaper into the space between the reel cutter (cutting cylinder) and the bed knife (bottom blade) at an angle of 90 degrees. Then, rotate the reel cutter (cutting cylinder) counter-clockwise (when you face the mower unit from the left) by hand to check the sharpness of the blades.

3. Check the sharpness at entire range (three or four points from left edge to right one) of the reel cutter (cutting cylinder).

4. Using a piece of chalk, mark locations on the blade that are sharp.

5. Shift only the reel rotation/stop switching levers of the hydraulic motors in the mower units to be used for back lapping to the "Rotate" position. Shift the levers to the "Stop" position for the mower units for which you will not perform back lapping.

6. Loosen the anti-reverse reel rotation stopper knob, shift the stopper all the way to the "FOR BACKLAPPING" position, and then tighten the knob.

7. Start the engine, and run it at a low rpm.
Important
If you shift the reel rotation lever to the "REVERSE" position while the anti-reverse reel rotation stopper knob is not completely shifted to the "FOR BACKLAPPING" position, the safety device will be activated and will stop the engine.

8. Shift the reel rotation lever to the "REVERSE" (back lapping motion) position to rotate the reel cutter (cutting cylinder) in reverse.

9. Apply the abrasive evenly with the brush on the top side of reel cutter (cutting cylinder) where the newspaper was cut well or of chalk-marked locations. (Never apply to blunt areas.)

10. Idle the machine for a while, and when contact noise is no longer heard, return the reel rotation lever to the neutral position to stop reel cutter (cutting cylinder).

11. Stop the engine.

12. Wash off or wipe off with cloth etc. the abrasive from the reel cutter (cutting cylinder), then check it for sharpness.

13. Repeat steps 2 to 12 until the entire range (three or four points from left edge to right one) of the reel cutter (cutting cylinder) will be uniformly sharpened.

14. Finally, apply abrasive to the entire blade width of the reel cutter (cutting cylinder) and perform final back lapping.

15. Stop the rotation of the reel cutter (cutting cylinder), stop the engine, and then carefully and thoroughly wash off any remaining abrasive.

16. While checking the blade for sharpness, adjust blade engagement.

Maintenance (Main Body)

Removing/Installing Tires

Front Tires

Follow the steps below to remove the front tires:

1. Loosen the bolts.

2. Securely place the jack beneath the jack-up point of the front left/right frame area, and then raise it until the tire lifts off the ground. (See "Jack-up Points" (Page 5-6).)

3. Remove the bolts.

4. Remove the tire from the wheel mounting seat.

Caution
Refer to the Tightening Torque table. Note that the Baroness product warranty may not apply to defects caused by incorrect or overtorque tightening etc.

Important
Tighten the bolts in the tightening order (diagonally).

For installing the front tires, reverse the removing procedure.
Rear Tire

Follow the steps below to remove the rear tires:

1. Loosen the bolts.

2. Securely place the jack beneath the jack-up point of the rear frame area, and then raise it until the tire lifts off the ground. (See "Jack-up Points" (Page 5-6).)

3. Remove the bolts.

4. Remove the tire from the wheel mounting seat.

- **Caution**
  - Refer to the Tightening Torque table.
  - Note that the Baroness product warranty may not apply to defects caused by incorrect or overtorque tightening, etc.

- **Important**
  - Make sure that the belt has the specified amount of tension.

  - If the belt becomes slack due to frequent use, it may jump or slip.
  - In addition, if it is overtightened, it may wear prematurely.
  - If necessary, adjust it, and always check the belt for appropriate tension.

For installing the rear tires, reverse the removing procedure.

Adjustment of Belt Tension

- **Caution**
  - Be sure to stop the engine before adjusting the belts.

- **Important**
  - Make sure that the belt has the specified amount of tension.

  - If the belt becomes slack due to frequent use, it may jump or slip.
  - In addition, if it is overtightened, it may wear prematurely.
  - If necessary, adjust it, and always check the belt for appropriate tension.

Fan Belt

- **Caution**
  - Be sure to stop the engine before adjusting the belts.

For details on handling the engine, please refer to the separate Engine Operating Manual.

1. Press the middle of the belt with your finger to check the belt tension.

2. If the belt is too slack, loosen bolts A and B (that affix the alternator), then move the alternator to adjust the tension.

---

**Important**

Tighten the bolts in the tightening order (diagonally).

Fan Belt_001

1. Fan belt
2. Blade
3. Alternator
4. Bolt A
5. Bolt B
Adjustment of Parking Brake

**Danger**
If the brake wire is cut, the machine will be unable to stop. This would be extremely dangerous. If the brake wire is cracked or damaged, replace it with a new one immediately. If the parking brake is not sufficiently effective when it has been applied, adjust the brake wire.

Adjust the parking brake by tightening the brake wire adjustment bolt.

Adjustment of Parking Brake

<table>
<thead>
<tr>
<th>1</th>
<th>Parking brake lever</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>Lock nut</td>
</tr>
<tr>
<td>3</td>
<td>Adjustment bolt</td>
</tr>
<tr>
<td>4</td>
<td>Brake wire</td>
</tr>
</tbody>
</table>

Adjustment of Brake

**Danger**
If the brake wire is cut, the machine will be unable to stop. This would be extremely dangerous. If the brake wire is cracked or damaged, replace it with a new one immediately. If the brake is not sufficiently effective, adjust the brake wire.

Adjust the brake by tightening the brake wire adjustment bolt.

Break-in of Brakes

If the brake shoes or brake pads are worn, replace them with new ones. Immediately after replacement, drive to break in the brakes if the effectiveness of the brakes is low. While driving, lightly operate the brakes to break in the contact areas.
Adjusting the Neutral Position of the Piston Pump

**Caution**
Make sure not to touch rotating tires.

**Caution**
When adjusting the neutral position, pay close attention to abrupt start of the machine.
Place the jacks beneath the jack-up points, and then lift the machine until all the tires get off the ground.

If the machine moves forward or backward while the traveling pedals are released, they are not set to the neutral position.

Follow the steps below to make adjustments.

1. Stop the engine.
2. Place the jacks beneath the jack-up points, and then lift the machine off the ground.
   Use stable jack stands, and raise the machine until the tires lift off the ground. (See "Jack-up Points" (Page 5-6).)
3. Start the engine, and rev it up to the maximum rpm.
4. Adjust the neutral position.
   [1] If the front tires rotate forward, loosen the lock nuts, then turn the front wheel rod to shorten it.
   [2] If the front tires rotate in reverse, loosen the lock nuts, then turn the front wheel rod to extend it.
5. Find the position where the front wheels stop, and then tighten the lock nuts.
6. Follow the same steps to adjust the rear wheels.

Change of Constant Velocity Joint

**Caution**
Do not use any other grease than the grease for the NTN constant velocity joint.

If grease leaks from the joint and attaching portion or boot band attaching portion, replace the boot and O-ring etc.
You cannot reuse the boot band. Be sure to replace it with a new one.
Change of Fuse

Fuse Box

**Warning**

Before performing maintenance on the electrical system, be sure to disconnect the negative terminal of the battery.

**Caution**

If a fuse blows, a short may have occurred within the electrical circuit. Check for the cause, such as faulty terminal connections, damaged wiring or terminals, or incorrect wiring.

The fuse box includes spare fuses and tools.

The machine uses a mini fuse for automobiles. Replace an old fuse with a new fuse of the specified capacity.

### Fusible Link

Fuse capacities of the fusible links are 30 A and 50 A.

### Long-Term Storage

**Before Long-Term Storage**

- Remove dirt, grass clippings, debris, oil stains etc. completely.
- Supply oil and apply grease to appropriate parts.
- Remove the battery.
EU Declaration of Conformity

Product Identification

Make: BARONESS
Type: LM281
Starting Serial No.: Not Applicable
Measured Sound Power Level:
LWA 100.21 dB
LWA 103 dB
Guaranteed Sound Power Level:
Manufacturer: Kyoeisha Co., Ltd.
Name: 1-26 Miyuki-cho, Toyokawa, Aichi-pref., Japan
Address:

Conforms to the following Directives
2006/42/EC Machinery (MD)
2014/30/EU Electromagnetic compatibility (EMC)
2000/14/EC Noise emissions from outdoor equipment

We have been designed and manufactured using the following specifications
ISO 5395-1 : 2013 (2006/42/EC)
ISO 5395-3 : 2013 (2006/42/EC)

Technical Documentation
Keeper's Name: Kyoeisha Co., Ltd.
Keeper's Address: 1-26 Miyuki-cho, Toyokawa, Aichi-pref., Japan
