"Required reading"
Read this manual and the Owner's Manual for the engine before using the machine.
California Proposition 65

(For California, USA)

**WARNING:**
Operating, servicing and maintaining a passenger vehicle or off-road vehicle can expose you to chemicals including engine exhaust, carbon monoxide, phthalates, and lead, which are known to the State of California to cause cancer and birth defects or other reproductive harm. To minimize exposure, avoid breathing exhaust, do not idle the engine except as necessary, service your vehicle in a well-ventilated area and wear gloves or wash your hands frequently when servicing your vehicle. For more information go to www.P65Warnings.ca.gov/passenger-vehicle.

CALIFORNIA SPARK ARRESTER

(For California, USA)

**Warning**
Operation of this equipment may create sparks that can start fires around dry vegetation. A spark arrester may be required. The operator should contact local fire agencies for laws or regulations relating to fire prevention requirements.

The engine of this machine is not equipped with a spark arrester. In some areas there are local, state, or federal regulations requiring that a spark arrester be used on the engine of this machine.
Thank you for purchasing the Baroness machine. This manual explains proper handling, adjustment, and inspection of your machine. Prior to use, carefully read this manual to thoroughly understand the contents for safe and correct operation. We hope you will use the machine safely, and take advantage of its best performance. For handling, adjustment and inspection of the mower units, refer to the Owner's Operating Manual for the mower unit.

**Keeping the Owner's Operating Manual**

Keep this Manual in the box on the left side of the ROPS.
Read this manual carefully to ensure that you thoroughly understand how to properly operate and maintain this machine, and to avoid causing injury to yourself or others.

The operator is responsible for operating the machine properly and safely.

Do not perform maintenance on the machine other than that described in this manual.

Be sure to also read the Owner's Manual for the engine, battery, etc.

Maintenance should only be performed by a certified specialist.

If you have any questions concerning maintenance or genuine parts, please contact your local Baroness dealer or Kyoeisha.

When making inquiries about this machine, please specify the machine's model designation and serial number.

When loaning or transferring this machine, please also provide this manual together with the machine.

Kyoeisha Co., Ltd.

Caution

The information described in this manual is subject to change for improvement without prior notice.

When replacing parts, be sure to use genuine Baroness parts or parts designated by Kyoeisha.

Note that the Baroness product warranty may not apply to defects caused by the use of parts from other companies.

Warning Symbols

This manual uses the following warning symbols for handling precautions that are important for your safety.

![Warning Symbol]

This symbol indicates the articles regarding “Danger,” “Warning,” or “Caution.”

Those articles describe important safety precautions and so read them carefully to understand completely before operating the machine.

Failure to adequately follow these safety precautions may cause an accident.

Danger

This symbol indicates that serious injury or death will occur if the warning is ignored.

Warning

This symbol indicates that serious injury or death may occur if the warning is ignored.

Caution

This symbol indicates that injury or damage to property may occur if the warning is ignored.

Important

This symbol indicates precautions on the mechanism of the machine.
Purpose

This machine is intended for cutting turf grass at golf courses. Do not use this machine in any way other than its intended purpose, and do not modify the machine. Operating this machine for other purposes and modifying it may be very dangerous and may cause damage to the machine. In addition, this machine is not authorized for operation as a special motor vehicle. Do not operate it on public roads.

Failure to adequately follow these safety precautions may cause an accident resulting in injury or death.

**Danger**

This machine is designed to ensure safe operation and has been tested and inspected thoroughly before shipment from the factory. The machine is equipped with safety devices to prevent accidents. However, whether the machine demonstrates its original performance level depends on the manner in which it is operated and handled, as well as the manner in which it is managed on a daily basis. Inappropriate use or management of the machine may result in injury or death. Observe the following safety instructions to ensure safe operation.

**Safe Operating Practices**

The following instructions include the ones from CEN standard EN 836: 1997, ISO standard 5395: 1990, and ANSI B71.4-2004.

**Training**

1. Read this manual and other training material carefully. Be familiar with the controls, safety signs, and the proper use of the equipment.
2. If the operator or mechanic can not read English it is the owner's responsibility to explain this manual to them.
3. All operators and mechanics should seek and obtain professional and practical instruction. The owner is responsible for training the users. Such instruction should emphasize.
   - The need for care and concentration when working with ride-on machines.
   - Control of a ride-on machine sliding on a slope will not be regained by the application of the brake.
   - The main reasons for loss of control are
     - Insufficient wheel grip
     - Being driven too fast
     - Inadequate braking
     - The type of machine is unsuitable for its task
     - Lack of awareness of the effect of ground conditions, especially slopes
4. Never allow children or people unfamiliar with these instructions to use or service the machine. Local regulations may restrict the age of the operator.
5. The owner/user can prevent and is responsible for accidents or injuries occurring to themselves, other people, or property.
6. Keep in mind that the owner, operator, and mechanic are responsible for accidents or hazards occurring to other people or their property.

**Preparation**

1. Evaluate the terrain to determine what accessories and attachments are needed to properly and safely perform the job. Only use accessories and attachments approved by the manufacturer.
2. While operating, always wear substantial footwear, long trousers, hard hat, safety glasses, and ear protection. Long hair, loose clothing, or jewelry may get tangled in moving parts. Do not operate the equipment when barefoot or wearing open sandals.
3. Inspect the area where the equipment is to be used and remove all objects such as rocks, toys and wire which can be thrown by the machine.
4. Exercise care in the handling of fuel.

**Warning**

Warning—Fuel is highly flammable. Take the following precautions.

- Incorrect hitching and load distribution
- Never allow children or people unfamiliar with these instructions to use or service the machine.
- Local regulations may restrict the age of the operator.
- The owner/user can prevent and is responsible for accidents or injuries occurring to themselves, other people, or property.
- Keep in mind that the owner, operator, and mechanic are responsible for accidents or hazards occurring to other people or their property.
- The need for care and concentration when working with ride-on machines.
- Control of a ride-on machine sliding on a slope will not be regained by the application of the brake.
- The main reasons for loss of control are
  - Insufficient wheel grip
  - Being driven too fast
  - Inadequate braking
  - The type of machine is unsuitable for its task
  - Lack of awareness of the effect of ground conditions, especially slopes
- [1] Store fuel in containers specifically designed for this purpose.
- [2] Add fuel before starting the engine. Never remove the cap of the fuel tank or add fuel while the engine is running or when the engine is hot.
- [3] Refuel outdoors only and do not smoke while refueling.
- [4] If fuel is spilled, do not attempt to start the engine but move the machine away from the area of spillage and avoid creating any source of ignition until petrol vapours have dissipated.
- [5] Replace all fuel tanks and container caps securely.
5. Check that operator’s presence controls, safety switches and shields are attached and functioning properly. Do not operate unless they are functioning properly.
6. If the brake operation is faulty or the parking brake lever has noticeable play, be sure to adjust or repair them before operating the machine.
7. Replace faulty mufflers.
8. On multi-cylinder/multi-reel machines take care as rotating one cylinder/reel can cause other cylinder/reels to rotate.

Operation

1. Do not operate the engine in a confined space where dangerous carbon monoxide fumes can collect.
2. Only operate in good light, keeping away from holes and hidden hazards.
3. Before attempting to start the engine, disengage all attachments, shift into neutral, and engage the parking brake. Only start engine from the operator’s position. Use seat belts if provided.
4. Remember there is no such thing as a safe slope. Travel on grass slopes requires particular care. To guard against overturning:
   [1] Do not stop or start suddenly when going up or downhill.
   [5] Never operate across the face of the slope, unless the machine is designed for this purpose.
   [6] Never drive the machine on a slope with an angle of gradient that is greater than that specified or in a place where there is a danger of the machine slipping.
5. Never operate the machine with damaged guards, shields, or without safety protective devices in place. Be sure all interlocks are attached, adjusted and functioning properly.
6. Do not change the engine governor settings or overspeed the engine. Operating the engine at excessive speed may increase the hazard of personal injury.
7. Do the following before leaving the operator’s position.
   [1] Stop on level ground.
   [2] Disengage the power take-off and lower the attachments.
   [3] Change into neutral and set the parking brake.
   [4] Stop the engine and remove the key.
8. Disengage the drive to attachments, stop the engine, and remove the ignition key in the following conditions.
   [3] Before making height adjustment unless adjustment can be made from the operator’s position.
   [5] Before checking, cleaning, or working the machine.
   [6] After striking a foreign object or if an abnormal vibration occurs. Inspect the machine for damage and make repairs before restarting and operating the equipment.
9. Keep hands and feet away from the cutting units and the rotating parts.
10. Look behind and down before backing up to be sure of a clear path.
11. Do not carry passengers.
12. Never operate while people, especially children, or pets are nearby.
13. Slow down and use caution when making turns and crossing roads and sidewalks.
14. Stop the blades rotating before crossing surfaces other than grass.
15. Disengage drive to attachments when transporting or not in use.
16. When using any attachments, never direct discharge of material toward bystanders nor allow anyone near the machine while in operation.
17. Do not operate the machine under the influence of alcohol or drugs.
18. Take care when loading or unloading the machine into a trailer or a truck. Load or unload the machine in a flat and safe place. Before loading or unloading, set the parking brake on the truck or trailer, stop the engine, and chock the wheels. When transporting the machine on a truck or a trailer, set the parking brake, stop the engine, and fasten the machine to the truck with a rope or other suitable restraining device that has sufficient strength. When using a loading ramp, select one with sufficient strength, length, and width and that will not cause the machine to slip.

19. Close the fuel valve before transporting the machine.

20. Use care when approaching blind corners, shrubs, trees, or other objects that may obscure vision.

21. Do not take your eyes off the road ahead. Do not operate the machine with no hands.

22. Reduce the throttle setting during engine run-out and, if the engine is provided with a shut-off valve, turn the fuel off at the conclusion of operation.

**Maintenance and storage**

1. Disengage drives on level ground, lower the attachments, set parking brake, stop engine and remove key from ignition. Wait for all movement to stop before adjusting, cleaning or repairing.

2. When machine is to be parked, stored, or left unattended, lower the cutting units unless a positive mechanical lock is provided.

3. To reduce the fire hazard, keep the engine, silencer/muffler, battery compartment fuel storage area, cutting unit and drives free of grass, leaves, or excessive grease. Clean up oil or fuel spillage.

4. Allow the engine to cool before storing in any enclosure.

5. Only cover the machine with a sheet after hot parts have sufficiently cooled down.

6. Never store the equipment with fuel in the tank inside a building where fumes may reach an open flame or spark.

7. If the engine is provided with a shut-off valve, shut off valve while storing or transporting.

8. Do not store fuel near flames.

9. Never allow untrained personnel to service machine.

10. Allow the engine/muffler to cool before checking/maintenance.

11. Appropriately manage and correctly use the tools necessary for servicing or adjusting the machine.

12. Use jack stands to support components when required.

13. Carefully release pressure from components with stored energy.

14. Be sure to depressurize the hydraulic system before performing maintenance operations on it such as removing hydraulic equipment.

15. Check whether line connectors in the hydraulic system are properly tightened. Before applying hydraulic pressure, check the connections of the hydraulic pressure lines and the condition of the hoses.

16. When checking the hydraulic circuit for pinhole leaks or oil leakage from nozzles, do not use your hands. Use items such as paper or corrugated cardboard to find leakage points. Be extremely careful with high-pressure oil as it may pierce your skin, resulting in an injury. If fluid is injected into the skin it must be surgically removed within a few hours by a doctor familiar with this form of injury or gangrene may result.

17. Disconnect battery before making any repairs. Disconnect the negative terminal first and the positive last. Reconnect positive first and negative last.

18. Make sure that parts such as wires are not touching each other and that their covers have not come off.

19. Use care when checking the cylinders/reels and bed knives.

[1] Wear gloves and use caution when servicing them.

[2] Be careful during adjustment of the machine to prevent entrapment of the fingers between moving blades and fixed parts of the machine.

20. On multi-cylinder/multi-reel machines take care as rotating one cylinder/reel can cause other cylinder/reels to rotate.

21. Keep hands and feet away from moving parts. If possible, do not make adjustments with the engine running.
22. Charge batteries in an open well ventilated area, away from spark and flames. Unplug charger before connecting or disconnecting from battery. Wear protective clothing and use insulated tools.

23. Keep all parts in good working condition and all hardware tightened. Replace all worn or damaged decals.

24. Keep all nuts, bolts and screws tight to be sure the equipment is in safe working condition.

25. Check the grass catcher frequently for wear or deterioration.

26. If the fuel tank has to be drained, do this outdoors.
Recycle and Waste Disposal

About Recycle

Recycling battery etc. is recommended for environmental conservation and economical use of resources. It may be required by local laws.

About the Waste disposal

Make sure that waste generated when servicing or repairing the machine is disposed of in accordance with local regulations. (e.g. waste oil, antifreeze, rubber products, and wires etc.)

The factory default maximum engine rpm is 2,800 rpm.

**Sound pressure level**

Sound pressure level

This machine was confirmed to have a continuous A-weighted sound pressure level of 83 dB by measuring identical machines in accordance with the procedure specified in ISO5395-1:2013.

**Sound power level**

Sound power level

This machine was confirmed to have a sound power level of 103 dB by measuring identical machines in accordance with the procedure specified in directive 2000/14/EC.

**Vibration level**

Hand-arm vibration

This machine was confirmed not to exceed a vibration level of 2.5 m/s² to hands and arms by measuring identical machines in accordance with the procedure specified in ISO 5349-1:2001, ISO 5349-2:2001.

Whole body vibration

This machine was confirmed not to exceed a vibration level of 0.5 m/s² to the whole body by measuring identical machines in accordance with the procedure specified in ISO 2631-1:1997, ISO 2631-2:2003.

Serial Number Plate_001

Model: 
Serial No.: 

Serial Number Plate_001
**Specification Decal**

(For Europe)
The Specification decal indicates the CE marking, model, and weight, etc.

**Noise Emission Decal**

(For Europe)
The noise emission decal indicates the sound power level determined by measuring identical machines in accordance with the procedure specified in the EC directives.

**Year of Manufacture Decal**

(For Europe)
The year of manufacture decal indicates the year when this machine was manufactured.

**ROPS Authentication Decal**

The ROPS authentication decal indicates the manufacturer, model, etc., in accordance with International Standard ISO 21299:2009.

**Battery capacity decal**

(For Europe)
The battery capacity decal indicates the capacity by 20HR and CCA.

**Recycle Decal**

Recycle Decal illustrates Recycle Mark in accordance with local regulation.

---

Names of Each Section
Battery Danger Decal

Battery Danger Decal describes handling precautions for battery.

Safety Signs and Instruction Signs

Safety decals and instruction decals are attached to this machine. Make sure that they are preserved in their entirety. If they are damaged, become dirty, or peel off, replace them with new ones.

Part numbers for decals that need to be replaced are listed in the parts catalog. Order them from a Baroness dealer or Kyoeisha.
## Description of Safety Decals and Instruction Decals

<table>
<thead>

1. **Warning**
   - Read the Owner's Operating Manual.

2. **Warning**
   - Apply the parking brake, stop the engine, and then remove the ignition key before leaving the machine.

3. **Danger**
   - Flying objects - All persons other than the operator must keep a safe distance from the machine.

4. **Danger**
   - May cut your hand or leg - Keep hands and feet away from moving parts.

5. **Warning**
   - Be careful of exhaust emissions.

6. **Danger**
   - Rollover - Do not work on slopes of 15 degrees or more. When you descend a slope, drive at low speed. If the machine is equipped with ROPS, fasten your seatbelt.

7. **Warning**
   - Rollover - Do not switch between 2WD and 3WD while traveling on downward slopes. Do not set the reel rotation switch to the “Rotation” (reel rotation) position while traveling on downward slopes. Do not travel in three-wheel drive on downward slopes.

Inspection Before Use

Be sure to perform an inspection before you start using the machine so that you will be able to take advantage of its optimum performance for a long period of time.

Radiator

Inspection of Radiator

For details on handling the engine, please refer to the separate Engine Operating Manual.
1. Make sure that there is no damage to the radiator.
2. Make sure that the radiator is not contaminated.

Cleaning of Radiator

For details on handling the engine, please refer to the Owner's Manual for the engine.

Important

An unclean radiator may cause the engine to overheat or seize. It may also cause malfunction of the hydraulic system.

Important

Do not use solid objects, such as a spatula or screwdriver, or high-pressure water to clean the radiator or oil cooler. Otherwise, special fins or tubes may be damaged, possibly resulting in reduced cooling performance or coolant leakage.

1. Open the hood. "Hood" (Page 4-29)
2. Pull up the dust screen to remove it.

3. Carefully clean the front and back of the dust screen and radiator with water or compressed air.
Coolant

Inspection of Coolant

For details on handling the engine, please refer to the Owner's Manual for the engine.

⚠️ Warning

Do not touch the radiator or coolant during engine operation or immediately after the engine has been turned off. Otherwise, you may get burned.

⚠️ Caution

Inspection should take place after the engine has well cooled down.

1. Make sure that the coolant level in the reserve tank is between "FULL" and "LOW."

⚠️ Caution

The radiator cap is pressurized. If you remove the radiator cap while the engine is overheated, hot steam will burst out, possibly resulting in burns. Make sure that the water temperature and pressure are reduced, and then grab the cap with a thick cloth and gradually open the cap.

Important

When you supply coolant, be sure to use clean water, such as tap water. During winter, remove coolant. Alternatively, mix long-life coolant and clean water, and then pour it into the radiator and reserve tank.

Relationship between concentration of long-life coolant (LLC) and freezing temperature

<table>
<thead>
<tr>
<th>Freezing temperature</th>
<th>LLC concentration (volume %)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Down to -10 °C (14 °F)</td>
<td>20%</td>
</tr>
<tr>
<td>Down to -15 °C (5 °F)</td>
<td>30%</td>
</tr>
<tr>
<td>Down to -20 °C (-4 °F)</td>
<td>35%</td>
</tr>
<tr>
<td>Down to -25 °C (-13 °F)</td>
<td>40%</td>
</tr>
</tbody>
</table>

1. If the coolant level in the reserve tank is lower than the "LOW" mark, open the reserve tank cap and fill the tank with clean water up to the "FULL" mark.

Coolant Supply

For details on handling the engine, please refer to the Owner's Manual for the engine.

⚠️ Warning

Do not touch the radiator or coolant during engine operation or immediately after the engine has been turned off. Otherwise, you may get burned due to high temperatures. After the radiator has cooled down sufficiently, open the radiator cap.

⚠️ Caution

Supply coolant after the engine has well cooled down.
2. If no coolant is in the reserve tank, follow the steps below to fill the tank with clean water.

[1] Open the radiator cap, and then supply clean water up to the opening.

[2] Open the reserve tank cap, and then supply clean water up to the "FULL" mark.

Oil cooler

Inspection of Oil Cooler

1. Make sure that there is no damage to the oil cooler.
2. Make sure that the oil cooler is not contaminated.

Cleaning of Oil Cooler

**Caution**

An unclean oil cooler may cause malfunction of the hydraulic system.

**Important**

Do not use solid objects, such as a spatula or screwdriver, or high-pressure water to clean the radiator or oil cooler. Otherwise, special fins or tubes may be damaged, possibly resulting in reduced cooling performance or coolant leakage.

Hydraulic Oil

Inspection of Hydraulic Oil

The oil gauge is located on the back of the hydraulic tank.

1. Raise the mower units and maintain that position on a level surface.
2. Make sure that the oil level is at the middle of the oil gauge.

3. Check underneath the machine for hydraulic oil leakage.
Hydraulic Oil Supply

**Important**

Do not mix different types of oil.

**Important**

Use Shell Tellus S2M46 (or equivalent) as hydraulic oil.

1. Remove the rear cover.
2. If the hydraulic oil level is low, follow the steps below to supply oil.

   [1] Open the tank cap, and then supply hydraulic oil through the oil filling port until the oil level reaches the middle of the oil gauge on the hydraulic tank.

3. Start the engine, raise and lower the mower units, and turn the steering wheel left and right. Move forward and reverse repeatedly several times.
4. Raise the mower units and maintain that position on a level surface, and then check to see if the oil level is at the middle of the oil gauge. If necessary, supply oil.
5. Check underneath the machine for hydraulic oil leakage.
6. Install the rear cover.

Air Cleaner

**Inspection of Air Cleaner**

For details on handling the engine, please refer to the Owner's Manual for the engine. The air cleaner is a component that removes dirt from the intake air to prevent wear of the cylinder liners and piston rings so that the engine will always operate smoothly. A contaminated air cleaner element may cause malfunction of the engine.

1. Make sure that there is no damage to the air cleaner.
2. Make sure that the air cleaner element is not contaminated.
Cleaning of Air Cleaner

For details on handling the engine, please refer to the Owner's Manual for the engine. A contaminated air cleaner element may cause malfunction of the engine. To maximize the life of the engine, clean the air cleaner properly.

1. Follow the steps below to clean the air cleaner.
   [1] Unclip at two locations to remove the air cleaner cap, and then remove the air cleaner element.
   [2] While paying close attention not to damage the air cleaner element, tap a solid portion of the air cleaner element or blow compressed air from its inside to remove dust and dirt.
   If the air cleaner element is extremely contaminated, replace it with a new one.
   [3] Attach the air cleaner element to the air cleaner body.
   [4] Attach the air cleaner cap, and then fix it securely with the clips.

Battery

Inspection of Battery

For details on handling the battery, please refer to the separate Battery Instruction Manual.

⚠️ Danger
Keep fire away while inspecting or charging the battery.
The battery may explode.

⚠️ Warning
Do not allow the battery fluid level to become lower than the LOWER LEVEL (minimum fluid level line).
The battery may explode if it is used or charged while the battery fluid level is at the LOWER LEVEL (minimum fluid level line).

1. Clean the areas around the battery fluid level lines using a cloth dampened with water.
2. Make sure that the battery fluid level is between the UPPER LEVEL (maximum fluid level line) and the LOWER LEVEL (minimum fluid level line).
Supply of Battery Fluid

For details on handling the battery, please refer to the Battery's Owner's Manual.

**Danger**

Be careful not to let your skin, eyes or clothes, etc., come into contact with the battery fluid or accidentally swallow the fluid. Should your skin or clothes come into contact with the battery fluid, immediately wash them away with water.

**Warning**

When you supply battery fluid, wear protective garments and safety glasses, etc.

**Caution**

Implement after the engine and muffler etc. have well cooled down. Otherwise you may get burned.

1. If the battery fluid level is lower than halfway between the UPPER LEVEL (maximum) line and LOWER LEVEL (minimum) line, add purified water up to the UPPER LEVEL (maximum) line.

---

### Brake

**Inspection of Brake**

While traveling, depress the brake pedal firmly to make sure that the brake is applied effectively.

**Inspection of Parking Brake**

1. Depress the brake pedal and pull the parking brake lever to check that the parking brake is applied effectively.
2. Make sure that the brake is not applied even slightly after you depress the brake pedal to release the parking brake lever.

---

### Tire

**Inspection of Tires**

1. Check the pneumatic pressure of the tires.
2. Make sure that there are no cracks, damage or abnormal wear.

---

**Inspection Before Use**

---

LM331

Handling Instructions
Belt

Inspection of Belt

⚠️ Caution

The engine must be stopped when the belt is inspected.

⚠️ Caution

If you have removed the cover during inspection, make sure that you replace it in the original position securely. If the cover remains removed, the operator may come in contact with the rotating objects or belt, possibly resulting in injuries.

Important

A slacking or damaged belt or damaged fan may cause overheating or lack of a battery charge.

1. Press the middle of the belt with your finger to check the belt tension.
2. Make sure that there are no cracks, damage or abnormal wear.

Wire

Inspection of Wire

1. Make sure that the wire is not cracked or damaged.
2. If the wire is cracked or damaged, replace it with a new one immediately.

Around the Engine

Inspection of Engine-Associated Parts

For details on handling the engine, please refer to the Engine's Owner's Manual.

1. Check the fuel system parts for loosened or cracked joints and leakage. Replace the parts if necessary.
2. Blow compressed air to clean any grass or flammable materials that may be attached on or around the muffler.

Engine Oil

Inspection of Engine Oil

For details on handling the engine, please refer to the Owner's Manual for the engine.

Important

Securely tighten the oil level gauge and oil filler cap.

1. Stop the engine, wait for 10 to 20 minutes for the engine to cool down, and then check the oil level.
2. Position the machine so that the engine is level, and then fully insert the oil level gauge to check the oil level.

3. The appropriate oil level should be between the upper and lower limit lines on the gauge.
Supply of Engine Oil

For details on handling the engine, please refer to the Owner's Manual for the engine.

**Important**
Do not supply too much engine oil. Otherwise, the engine may be damaged.

**Important**
Do not mix different types of engine oil.

**Important**
Be sure to use engine oil that is classified as API Service Grade CF or higher, with an SAE Viscosity that is appropriate for the operating environment (ambient temperature).

**Important**
Securely tighten the oil level gauge and oil filler cap.

1. Engine oil is supplied through the oil filler cap. Remove the oil filler cap, and then supply new engine oil until the oil reaches a level in between the upper and lower limit lines on the oil level gauge.

2. Securely install the oil filler cap.

3. It will take a while for the supplied engine oil to descend into the oil pan. Check the oil level again 10 to 20 minutes after supplying the oil.

Fuel

Inspection of Fuel Quantity

With the machine on a level surface, observe the fuel gauge in the meter panel to check the fuel level.

**Danger**
Do not supply fuel above F (FULL) level of the fuel gauge. If you supply too much fuel, it might overflow from the cap when you travel or work on a slope.

**Warning**
Keep away from fire while refueling. Do not smoke while refueling.

If the fuel gauge in the meter panel indicates a level close to E (EMPTY), supply fuel (diesel) at your earliest convenience. The fuel tank capacity is approximately 25.0 dm³ (25.0 L).
Tank cap

**Water Separator**

**Inspection of Water Separator**

**Important**

Water-contaminated fuel may impair engine startability, decrease output or damage engine parts.

The water separator removes water from the fuel.

1. Make sure that debris and water have not accumulated in the cup.
   - With the float raised, water contamination is confirmed.
   - When the float reaches the drain level, drain the water.

**Draining of Water Separator**

**Important**

Water-contaminated fuel may impair engine startability, decrease output or damage engine parts.

4. Close the fuel cock of the water separator.

5. Remove the ring nut, and then remove the cup.

6. Drain the water from the cup.

**Draining of Water Separator_001**

<table>
<thead>
<tr>
<th>1</th>
<th>Fuel cock</th>
</tr>
</thead>

</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>Cup</td>
</tr>
<tr>
<td>3</td>
<td>Element</td>
</tr>
</tbody>
</table>

**Draining of Water Separator_005**

4. Close the fuel cock of the water separator.

5. Remove the ring nut, and then remove the cup.

6. Drain the water from the cup.

**Important**

During installation, prevent contamination with dirt or dust. If the fuel is contaminated with dirt or dust etc., the fuel injection pump and injection nozzle will become worn.

7. Correctly install all parts in their original positions.

8. Fill up the fuel tank with fuel, and then open the fuel cock of the fuel filter.

**Draining of Water Separator_006**

4. Close the fuel cock of the water separator.

5. Remove the ring nut, and then remove the cup.

6. Drain the water from the cup.
9. Open the fuel cock of the water separator.

4. Close the fuel cock of the water separator.

10. Loosen the air-bleed plug to bleed the air.
11. When the cup is filled with fuel, close the air-bleed plug.
12. If the engine does not start within 15 seconds after switching the ignition key to the "START" position, wait at least 30 seconds, and then repeat the same operation.
   If there is still air in the cup after starting the engine, bleed the air again.

Cleaning of Water Separator

Important

Water-contaminated fuel may impair engine startability, decrease output or damage engine parts.

Clean the water separator at least every 450 hours and whenever debris has accumulated in the cup.
1. Stop the engine, and then turn the key switch to the "OFF" position.
2. Place a container under the water separator.
3. Close the fuel cock of the fuel filter.

6. Drain the water from the cup.
7. Clean the cup and element with diesel fuel.

Important

During installation, prevent contamination with dirt or dust.
If the fuel is contaminated with dirt or dust etc., the fuel injection pump and injection nozzle will become worn.

8. Correctly install all parts in their original positions.
9. Fill up the fuel tank with fuel, and then open the fuel cock of the fuel filter.
10. Open the fuel cock of the water separator.

</tbody>
</table>

11. Loosen the air-bleed plug to bleed the air.
12. When the cup is filled with fuel, close the air-bleed plug.
13. If the engine does not start within 15 seconds after switching the ignition key to the "START" position, wait at least 30 seconds, and then repeat the same operation.
   If there is still air in the cup after starting the engine, bleed the air again.

**Fuel filter**

**Inspection of Fuel Filter**

For details on handling the engine, please refer to the Engine's Owner's Manual. The fuel filter is located in the piping for fuel supply system and removes contamination.

1. Make sure that there is no fuel leakage.
2. Make sure that the fuel filter is not damaged or dirty.

**Oil Leakage**

**Inspection of Oil Leakage**

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>When performing maintenance on the hydraulic system, lower the mower units.</td>
</tr>
</tbody>
</table>

After approximately 50 hours of operation, some tightened portions may be loosened and oil and grease may leak.

**Grass Catcher**

**Inspection of Grass Catcher**

The grass catcher may no longer correctly collect grass clippings due to its wear, damage, deformation, etc., caused by frequent use.

1. Make sure that there is no wear or deterioration of the grass catcher.
2. Make sure that there is no damage to the grass catcher.
3. Make sure that there is no interference to moving parts due to deformation of the grass catcher.
Tightening torques

Standard tightening torques

Bolts and Nuts

**Important**

A number of bolts are used in each part of this machine. Be sure to re-tighten the bolts and nuts, because they may be loosened at the earlier stage of the use.

As to the bolts and nuts without any special instruction, tighten them in appropriate tightening torque with proper tool.

Too much tightening may cause the looseness or damage of the screw.

The strength of tightening is determined by types of screws, strength, the friction of thread face or base face and others.

The table below is for the galvanized or parkerized bolts.

In case that the strength of internal thread is weak, it is not applied.

Do not use rusty or sand attached "screw."

Otherwise, it may cause insufficient tightening even if you apply the specified tightening torque.

The friction of the screw face becomes higher and the tightening torque is canceled out by the friction, therefore sufficient tightening cannot be applied.

If "screw" is wet by water or oil, do not tighten it with normal tightening torque.

If the screw is wet, the torque coefficient will get smaller and it may result in too much tightening.

Too much tightening may cause looseness by the screw stretched or result in damage.

Do not use a bolt experienced too much burden.

Using the impact wrench requires the skill.

Do exercise as much as possible for steady tightening.

Handling Instructions
Adjustment Before Operating

Adjustment of Steering Wheel

**Warning**
Do not make adjustments while traveling since doing so is dangerous.

**Caution**
Be sure the steering wheel position is securely locked. It would be extremely dangerous if it becomes loose while traveling.

The steering wheel can be adjusted up or down. Adjust the position to fit the operator. Shift the tilt lever to the "FREE" position, move the steering wheel to the position that suits the work requirements, and then shift the tilt lever to the "LOCK" position to secure the steering wheel in place.

The tilt lever is located at the left in front of the driver’s seat.

Adjustment of Seat

Use the seat adjustment levers to adjust the seat. Adjust the position to fit the operator.

1. Use the forward/backward adjustment lever to adjust the seat back and forth.
2. Use the backrest tilt adjustment lever to adjust the angle of the backrest.

3. Pull out the suspension adjustment handle and move it up or down to adjust the firmness of the seat suspension. Observe the suspension adjustment scale while making adjustments. (50 - 160 kg)

Adjustment of Mower Stopper Pin

Note:
Depending on the specifications, this function may not be available. The mower stopper pin can prevent or allow tilting of the mower units. Adjust according to the operating conditions. Fixed:

- The mowing line while traveling straight ahead is a straight line. (The mowing line is easy to see.)
- The mower units do not tilt while operating on slopes, and incomplete mowing can be reduced.

Released:

- It is appropriate when turning while mowing or it is easy to follow undulations.
1. With the machine on a level surface, lower all mower units.
2. Apply the parking brake, and then stop the engine.
3. Adjust the position of the mower stopper pin, and then insert the cotter pin.
To fix:
Insert the cotter pin into the upper hole in the mower stopper pin.

When mowing on a markedly uneven surface, shorten (compress) the spring.
1. Lower all mower units on a level place.
2. Apply the parking brake, and then stop the engine.
3. Loosen the lock nut.
4. Tighten the nut to adjust the length of the spring (compression).
   • Mower #2 and #3: 140.0 mm (5.51 in)
   • Mower #1: 60.0 mm (2.36 in)
5. Tighten the lock nut.

To release:
Insert the cotter pin into the lower hole in the mower stopper pin.

Adjustment of Mower Stabilizer

Note:
Depending on the specifications, this function may not be available.

Important
After adjusting the cutting height, adjust the mower stabilizer.

The mower stabilizer stabilizes the mower units and prevents an undulating finish (a phenomenon called Marcelling).
**Procedure to Start / Stop Engine**

### Start / Stop of Engine

#### Procedure to Start Engine

| Warning | Before starting the engine, make sure that there are no other people or obstacles around the machine. |
| Caution | Starter operation must take 15 seconds or less. If the engine still does not start, stop using the battery for 30 to 60 seconds to avoid exhausting the battery. |

1. Open the fuel cock of the water separator.
2. Open the fuel filter cock.
   
   **Note:**
   The water separator and fuel filter are located under the rear right of the seat.

3. Sit on the seat.
4. Make sure that you have depressed the brake pedal and applied the parking brake.
5. Set the reel rotation switch to the "Stop" position.
6. Move the mower unit up/down lever to the neutral position.
7. Make sure that the traveling pedal is in the neutral position.

8. Shift the throttle lever from the turtle icon (low speed) halfway to the rabbit icon (high speed).

| Important | The thermo-start lamp turns off at the specified time. However, the lamp turning off is not related to the glow plug generating heat. If the ignition key is left in the "GLOW" position after the lamp is turned off, the plug will still generate heat. The thermo-start lamp will stay illuminated for five seconds. |

9. Switch the ignition key to the "GLOW" position.

10. Make sure that the glow plug is generating heat and the thermo-start lamp is turned on.
11. After the thermo-start lamp turns off, immediately set the ignition key to the "START" position.

Caution
Quickly returning the ignition key from the "START" position to the "ON" position may result in damage to the device.

12. When the starter starts rotating and the engine starts, slowly return the ignition key to the "ON" position.

13. Make sure that the charge lamp and oil pressure lamp turn off. If they do not turn off, stop the engine and inspect the machine.

14. Shift the throttle lever to the turtle icon (low speed), and then warm up the engine for 1-2 minutes.

15. Gradually move the throttle lever to the rabbit icon (high speed).

Procedure to Stop Engine

1. Set the traveling pedal to the neutral position.
2. Depress the brake pedal, and then apply the parking brake lever.
3. Set the reel rotation switch to the "Stop" position.
4. Shift the throttle lever toward the turtle icon (low speed), and then let the engine idle for 1 to 2 minutes.
5. Switch the ignition key to the "OFF" position.
6. Make sure that the engine has stopped.
7. Remove the ignition key.
8. Leave the driver's seat.

9. Close the fuel cock of the fuel filter.
10. Close the fuel cock of the water separator.

Safety Mechanisms

This machine features a safety device for starting/stoping the engine.

1. As for starting the engine, the safety device prevents the engine from starting unless it meets each of the following four conditions.
   • An operator is sitting on the seat.
   • The parking brake is applied.
   • The reel rotation switch is set to the "Stop" position.
   • The traveling pedal is set to the neutral position.

2. In the event the operator leaves the seat with the parking brake applied and the engine running, the safety device will be activated and will stop the engine under any of the following conditions:
   • The traveling pedal is not set to the neutral position. (The operator has depressed the traveling pedal.)
   • The reel rotation switch is set to the "Rotate" position.

Warning Mechanisms

This machine features a warning mechanism for overheating.

1. If water temperature inside the engine exceeds 105 degrees Celsius, a buzzer will sound. (intermittent tone)
Operation of Each Section

Precautions for Operating the Machine

⚠️ Caution
Under any circumstances drive the machine at such a speed that you can stop it immediately for emergencies.

Cautions for when You Leave the Machine

⚠️ Caution
If the brakes are not sufficiently effective, use the wheel stoppers to secure the machine.

Operation Decals

- **Operation Decals_001**

This indicates the Stop position for the reel cutter (cutting cylinder). |
Proximity Sensor

There is a proximity sensor on #2 mower arm fulcrum. This sensor detects the raised or lowered positions of mower unit #2. The information is related to controlling rotation and stop of the reel cutter (cutting cylinder).

2WD/3WD Selector Lever

Caution

Before switching between 2WD and 3WD operation, make sure that the machine is completely stopped.

Caution

Since traveling on steep downward slopes, wet surfaces and wet grassy downward slopes in 3WD is dangerous, use 2WD. Otherwise, the rear tires may slip and travel control may be lost.

The 2WD/3WD selector lever is located to the left of the driver's seat.

When the lever is shifted forward, 3WD mode is selected. When the lever is shifted backward, 2WD mode is selected.

Light Switch

Warning

The lights provide auxiliary lighting. Do not travel or operate the machine at night or under poor visibility.

Caution

Depending on the specifications, this function may not be available.

The light switch is located in the meter panel. When the switch is set to the "ON" position, the lights turn on. When it is set to the "OFF" position, the lights turn off.

Note:

The lights will not turn on when the key switch is set to the "OFF" position.
Throttle Lever

The throttle lever is located in the meter panel and enables you to adjust the engine rpm. Move the throttle lever toward the rabbit icon (high speed) to increase the engine rpm, and toward the turtle icon (low speed) to reduce the rpm.

Note:
The factory default maximum engine rpm is 2,800 rpm.

Mower Unit Up/Down Lever

⚠️ Caution
Before raising or lowering the mower units, be sure to sit on the seat.

⚠️ Caution
Before raising or lowering the mower units, make sure that there are no people around the machine.

⚠️ Caution
Be careful since shifting the mower unit up/down lever to the "DOWN" position lowers the mowers, even while the engine is stopped.

⚠️ Caution
Before operating the mower unit up/down lever, be sure to set the stop valve to the "Open" position.

The mower unit up/down lever is located in the operation panel (to the right of the driver's seat) and raises or lowers the mower units. Shift the lever to the "DOWN" position to lower the mowers, and shift it to the "UP" position to raise the mowers.

Note:
Even if the reel rotation switch is set to the "Rotation" position, the reel cutter (cutting cylinder) stops rotating when the mower unit up/down lever is set to the "Neutral" position or the mower units are raised.
Stop Valve

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>When you move the machine, or if you stop the engine with the mower units raised, be sure to set the stop valve to the &quot;Stop&quot; position.</td>
</tr>
</tbody>
</table>

The stop valve is located in the operation panel (to the right of the driver's seat). This valve prevents all raised mower units from falling.

Reel Reverse Switch

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not switch the reel reverse switch to the &quot;ON&quot; or &quot;OFF&quot; position while the reel cutter (cutting cylinder) is rotating. Otherwise, a hydraulic system malfunction may result.</td>
</tr>
</tbody>
</table>

If the reel rotation switch is not set to the "Rotation" position, the reel cutter (cutting cylinder) will not rotate.

The reel reverse switch is located under the hood. This switches the rotation direction of the reel cutter (cutting cylinder). When the reel reverse switch is set to the "ON" position, the reel cutters (cutting cylinders) of all mower units rotate in reverse (back lapping rotation). When the reel reverse switch is set to the "OFF" position, the reel cutters (cutting cylinders) rotate normally. 

Reel Rotation Switch

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Set the reel rotation switch to the &quot;Rotation&quot; position immediately before starting cutting work. At all other times, be sure to leave the reel rotation switch set to the &quot;Stop&quot; position.</td>
</tr>
</tbody>
</table>

The reel rotation switch is located in the operation panel (to the right of the driver's seat) and operates rotation of the reel cutters (cutting cylinders) of the mower units. When the reel rotation switch is set to the "Rotation" position, the reel cutters (cutting cylinders) of all mower units will rotate for cutting work. When the reel rotation switch is set to the "Stop" position, the reel cutters (cutting cylinders) will stop.
Reel reverse switch

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>ON (reverse rotation)</td>
</tr>
<tr>
<td>B</td>
<td>OFF (normal rotation)</td>
</tr>
</tbody>
</table>

Reel rotation/stop switching lever

⚠ Caution

Before operating the reel rotation/stop switching lever, be sure to set the reel rotation switch to the "Stop" position.

The reel rotation/stop switching lever is located on the reel motor attached to each mower unit. It is used during cutting and back lapping. Shift the lever(s) to the "Rotation" position only for the mower unit(s) to be used for cutting or back lapping. Leave the lever(s) for other mower units in the "Stop" position.

Traveling Pedal

⚠ Warning

This machine is not authorized as a special motor vehicle. Do not drive it on public roads.

The traveling pedal is located in the right foot area. When the forward end is depressed, the machine travels forward. When the backward end is depressed, the machine travels backward.

Brake Pedal

The brake pedal is located in the left foot area. To stop the machine, firmly depress the brake pedal.
Parking Brake Lever

**Caution**
Be sure to release the parking brake before driving. Otherwise, the brakes or hydraulic system may malfunction.

**Caution**
Never park the machine on a slope.

The parking brake lever is located under the left side of the meter panel.
To park the machine, depress the brake pedal and pull the parking brake lever completely.
To release the parking brake, depress the brake pedal again.

1. Loosen the lock bolt for the hood.
2. Release the rubber catches on the left and right sides.
3. Lift up the hood.
4. Close the hood slowly.
5. Hook the rubber catches without fail.
6. Tighten the lock bolt for the hood.

Hood

**Caution**
Do not open the hood in strong winds.

**Caution**
Be careful not to pinch your fingers when you open or close the hood.

**Important**
Before opening the hood, be sure to lower the mower units.
In addition, do not raise the mower units while the hood is open.
Otherwise, the hood will be damaged.
Rear Cover

**Caution**
Do not open the rear cover in strong winds.

**Caution**
Be careful not to pinch your fingers when opening or closing the cover.

1. Remove the bolts on the rear cover.
   Left and right mounting bolts (one each)

2. Bring the seat to the very front position.

3. If the ball proof net is installed, follow the steps below to fold back the ROPS.
   [1] Remove the clip pins on the left and right sides of the ROPS, and then remove the lock pins.

   [2] Fold back the ROPS.

4. Pull up the rear cover to remove it.
Center Cover

Caution

Be careful not to pinch your fingers when you open or close the cover.

1. Bring the seat to the backmost position.
2. Completely raise the steering wheel.
3. Remove the bolt on each side of the center cover.
4. Remove the center cover.

Battery Cutoff Switch

Important

After disconnecting, switch the ignition key to the "ON" position and check that the charge lamp and oil pressure lamp do not turn on.

The battery cutoff switch is located on top of the battery (behind the driver's seat, on the left).

This switch connects and disconnects the negative battery cable.

When the knob is tightened to set the switch to the "ON" position, the negative battery cable is connected. When knob is loosened to set the switch to the "OFF" position, the negative battery cable is disconnected.

Instruments

Instruments in the Meter Panel

1. Water temperature gauge
2. Fuel gauge
3. Pilot lamps
   - charge lamp, thermo-start lamp, and oil pressure lamp
Water Temperature Gauge

The water temperature gauge is located in the meter panel. This instrument indicates the water temperature inside the engine. If the water temperature gauge indicates a level close to "H" during operation, the machine is overheated. Remove the load from the engine, idle the machine for five minutes, stop the engine, and then inspect the machine and perform any necessary maintenance. If the water temperature exceeds 105 degrees Celsius, a buzzer will sound. (intermittent tone)

Fuel Gauge

The fuel gauge is located in the meter panel. This instrument indicates the quantity of fuel inside the fuel tank.

Pilot Lamps

Charge Lamp

The charge lamp is the left pilot lamp, located in the meter panel. This lamp turns on when the ignition key is set to the "ON" position before the engine starts. It turns off when the engine starts and the alternator starts operating properly. If this lamp illuminates while you are operating the machine, stop the engine immediately, and then inspect the machine and perform any necessary maintenance.

Thermo-start Lamp

The thermo-start lamp is the middle pilot lamp, located in the meter panel. When the ignition key is set to the "GLOW" position, this lamp turns on while the glow plug generates heat. Illumination of the thermo-start lamp is controlled by the glow lamp timer, and the lamp is turned off after a specified amount of time passes. The duration of illumination indicates an approximate period of time required for warm-up, and has been fixed at five seconds.
Oil pressure lamp

The oil pressure lamp is the right pilot lamp, located in the meter panel. This lamp turns on when the ignition key is set to the "ON" position before the engine starts. It turns off when the engine starts and engine oil pressure is generated properly. If this lamp illuminates while you are operating the machine, stop the engine immediately, and then inspect the machine and perform any necessary maintenance.

Overheat Warning Buzzer

If the water temperature inside the engine exceeds 105 degrees Celsius, a buzzer will sound. (intermittent tone)
Remove the load from the engine, idle the machine for five minutes, stop the engine, and then inspect the machine and perform any necessary maintenance.

Hour meter

The hour meter is located under the hood and indicates the total operation time of the engine. Every six minutes of engine operation will increase the number at the first digit (black number on a white background) by one. Every one hour of engine operation will increase the number at the next digit (white number on a black background) by one.
1/10 digit: Black number on white background
Hour digits: White number on black background

Travel of Machine

Traveling Procedure

Since traveling on steep downward slopes, wet surfaces and wet grassy downward slopes in 3WD is dangerous, use 2WD. Otherwise, the rear tires may slip and travel control may be lost.

1. Start the engine.
   "Procedure to Start Engine" (Page 4-18)
2. Raise all mower units, and then set the anti-falling stop valve to the "Stop" position.
3. Depress the brake pedal to release the parking brake.
4. Slowly depress the traveling pedal.
5. The machine will start to travel.
Towing the Machine

If the machine does not travel due to engine trouble, etc., you can move it in the following ways:
- Pushing by hand
- Towing (See the following procedure.)

**Caution**
Do not touch the unload valve except when towing the machine.

**Caution**
Before towing, check that the brake is applied effectively.

**Caution**
When towing the machine, travel at a speed no more than 3.0 km/h.

**Important**
For unloading, be sure to open the two unload valves.

**Important**
Before starting the engine, be sure to close the unload valves.

The unload valves are located under the floor panel.

1. Stop the engine. "Procedure to Stop Engine" (Page 4-19)
2. Apply the parking brake and chock the wheels.
3. Set the 2WD/3WD selector lever to the "2WD" position.
4. Loosen the lock nut on each of the two unload valves.
5. Tighten the two bolts to compress the unload valve operating pins and open the unload valves.
6. Remove the wheel stoppers.
7. Depress the brake pedal to release the parking brake.
8. Tow the machine slowly.
**Cutting Work**

**Warning**
Do NOT start to move or stop the machine abruptly. To do so is very dangerous. In addition, it may damage the hydraulic system or result in oil leakage.

**Caution**
Cutting work must be performed at an appropriate speed for the site and location. When cutting over bumpy surfaces, keep the engine rpm steady, and slow down the cutting speed.

**Caution**
Reel rotation will be turned on or off based on the sensor-detected position of the mower units. Please note that if you stop operating the mower unit up/down lever before the mower units are raised completely, reel rotation may not stop.

Mow with the lever shifted to the "DOWN" position.
When the lever is returned to the neutral position, the cylinders are fixed, preventing mowing on undulations.

1. Shift the reel rotation/stop switching levers of all mower units to the "Rotation" position.
2. Start the engine.
   - "Procedure to Start Engine" (Page 4-18)
3. Raise all mower units, and then set the anti-falling stop valve to the "Stop" position.
4. Depress the brake pedal to release the parking brake.
5. Shift the throttle lever to the rabbit icon (high speed) to run the engine at the maximum speed (2,800 rpm).
6. Right before starting cutting work, set the anti-falling stop valve to the "Open" position.
7. Shift the mower unit up/down lever to the "DOWN" position to lower the mower units.
8. Set the reel rotation switch to the "Rotation" position to rotate the reel cutters (cutting cylinders) of all mower units.
9. Depress the traveling pedal to start cutting work.

**Removal/Installation of Grass Catcher**

**Caution**
Stop the engine before removing or installing the grass catcher.

1. Set the reel rotation switch to the "Stop" position.
2. Lower the mower units.
3. Apply the parking brake.
4. Stop the engine.
5. Remove or install the grass catcher.
   - Removal of grass catcher: Lift up the grass catcher, and remove the mounting pins on the left and right of the grass catcher from the grass catcher mounting brackets.
   - Installation of grass catcher: Install the mounting pins on the left and right sides of the grass catcher into the grass catcher mounting brackets.

Mower unit #1

## Maintenance Precautions

**Caution**

First, learn well the maintenance operations you plan to perform.

**Caution**

Use tools appropriate for each maintenance operation.

**Caution**

For the safe and best performance of your machine, use Baroness genuine parts for replacement and accessories. Please note that our product warranty may be void if you use non-genuine parts for replacement or accessories.

## Maintenance Schedule

LM331

Follow the maintenance schedule below.

- ○ • • Inspect, adjust, supply, clean
- ● • • Replace (first time)
- △ • • Replace

*1: Consult your local Baroness Dealer or local KUBOTA Dealer for this service.

*2: The items above (*2 marked) are registered as emission related critical parts by KUBOTA in the U.S. EPA nonroad emission regulation. As the engine owner, you are responsible for the performance of the required maintenance on the engine according to the above instruction. Please see the warranty statement in detail.

Jacking up the machine

About the Jacking up the machine

⚠️ Warning ⚠️

When replacing a tire or beginning any other maintenance or repairs, be sure to chock the wheels to prevent the machine from moving. Before jacking up the machine, park it on a hard, flat surface such as a concrete floor and remove any obstacles that could prevent you from performing the work safely. When necessary, use an appropriate chain block, hoist, or jack. Support the machine securely with jack stands or appropriate blocks. Failure to do so may cause the machine to move or fall, resulting in injury or death.

Use the jack-up points identified in this manual when jacking up the machine. Only place a jack under the jack-up points specified. Placing a jack at any other point could result in damage to the frame or other parts.

Greasing

About Greasing

Since there may be adhesion or damage due to lack of grease on moving parts, they must be greased.

Add urea-based No. 2 grease in accordance with the Maintenance Schedule.

Other locations where the specified grease or lubricant is used are indicated in "Greasing Points".

Add grease using the specified grease or lubricant.

Greasing Points

Grease nipples are installed in the following locations.

Add grease every 50 hours of operation. However, for locations where a time is specified, add grease according to that schedule.

<table>
<thead>
<tr>

1. Lift arm fulcrum

Mower unit #1

There is one greasing point on the lift arm fulcrum connected to the mower unit.

Mower units #2 and #3

There are two greasing points on the lift arm fulcrum connected to each mower unit.
2. Mower arm fulcrum  
Mower unit #1  
There is one greasing point on the mower arm fulcrum.

5. Rear wheel housing

3. Brake pedal shaft fulcrum

4. Brake lever shaft  
Add grease every 100 hours of operation or every year, whichever comes earlier.

6. Tension lever

7. Neutral cam lever

8. Traveling pedal shaft fulcrum
9. Traveling pedal relay lever

Maintenance (Main Body)

Removing/Installing Tires

Front Tires

Follow the steps below to remove the front tires:

1. Loosen the bolts.

2. Securely place the jack beneath the jack-up point of the front left/right frame area, and then raise it until the tire lifts off the ground. "Jack-up Points" (Page 5-6)

3. Remove the bolts.

4. Remove the tire from the wheel mounting seat.

Caution

Refer to the Tightening Torque table. Note that the Baroness product warranty may not apply to defects caused by incorrect or overtorque tightening etc.

Important

Tighten the bolts in the tightening order (diagonally).

For installing the front tires, reverse the removing procedure.

Rear Tires

Follow the steps below to remove the rear tires

1. Loosen the bolts.

2. Securely place the jack beneath the jack-up point of the rear frame area, and then raise it until the tire lifts off the ground. "Jack-up Points" (Page 5-6)

3. Remove the bolts.

4. Remove the tire from the wheel mounting base.

Caution

Refer to the Tightening Torque Table. Note that the Baroness product warranty may not apply to defects caused by incorrect or overtorque tightening, etc.

Important

Tighten the bolts in the tightening order (crosswise).

For installing the rear tires, reverse the removing procedure.
Adjustment of Belt Tension

Caution
Be sure to stop the engine before adjusting the belts.

Important
Make sure that the belt has the specified amount of tension.

If the belt becomes slack due to frequent use, it may jump or slip. In addition, if it is overtightened, it may wear prematurely. If necessary, adjust it, and always check the belt for appropriate tension.

Fan Belt

Caution
Be sure to stop the engine before adjusting the belts.

For details on handling the engine, please refer to the separate Engine Operating Manual.

1. Press the middle of the belt with your finger to check the belt tension.
2. If the belt is too slack, loosen bolts A and B (that affix the alternator), then move the alternator to adjust the tension.

Hydraulic Pump Drive Belt

Caution
Be sure to stop the engine before adjusting the belts.

1. Open the hood.
2. With your finger, lightly press the middle of the belt with a force of 25 to 35 N (2.5 to 3.5 kgf) to check the belt tension.

3. Loosen the lock nut, and then turn the nut to adjust the length of the spring to 35.0 mm (1.38 in).

4. Secure with the lock nut.
Adjustment of Parking Brake

⚠️ Danger ⚠️
Make sure that the brake wire is not cracked or damaged.

⚠️ Danger ⚠️
Make sure that the brake is effective on slopes and that it is not applied any longer when you release it. Adjust the parking brake system whenever there is any abnormality.

Adjust the parking brake system by the adjustment bolt.

1. Follow the steps below to adjust the parking brake.
   1. Check position of the notch of the parking brake.
   2. Depress the brake pedal firmly, and then pull the parking brake lever to engage the latch on the notch.
   3. Make adjustment with the adjustment bolt so as to locate position of the arrow at 3 to 4 notches from the bottom.
Adjustment of Brake

**Danger**

If the brake wire is cut, the machine will be unable to stop. This would be extremely dangerous.
If the brake wire is cracked or damaged, replace it with a new one immediately.
If the brake is not sufficiently effective, adjust the brake wire.

**Important**

Adjust to reduce the play in the brake lever as much as possible so that the brake does not drag when the lever is released.

1. Adjust the foot brake by tightening the brake wire adjustment bolt.
   - If there is too much play in the brake lever, the braking power is reduced and the brake pedal feel is light.
   - If there is too little play in the brake lever, the braking power is increased and the brake pedal feel is heavy.

2. Start the engine and drive to check the following.
   - Make sure that heat is not generated in the brake area.
   - Make sure that the left and right brakes are equally effective.

3. If the left and right brakes are not equally effective, make fine adjustments with the adjustment bolt on the brake wire.

Break-in of Brakes

If the brake shoes or brake pads are worn, replace them with new ones.
Immediately after replacement, drive to break in the brakes if the effectiveness of the brakes is low.
While driving, lightly operate the brakes to break in the contact areas.

Adjusting the Neutral Position of the Piston Pump

**Caution**

Make sure not to touch rotating tires.

Be careful not to touch the muffler.

When adjusting the neutral position, pay close attention to abrupt start of the machine. Place the jacks beneath the jack-up points, and then lift the machine until all the tires get off the ground.

**Important**

Make sure that there is no abnormality in the bearings of the trunnion lever. If there is an abnormality, perform a replacement before the following operation.

If the machine moves forward or backward while the traveling pedals are released, they are not set to the neutral position.
Follow the steps below to make adjustments.
1. Stop the engine.
2. Place the jacks beneath the jack-up points, and then lift the machine off the ground. Use stable jack stands, and raise the machine until the tires lift off the ground. "Jack-up Points" (Page 5-6)

3. Make sure that no tires get contact with the jack stand.

4. Open the hood.

5. Make sure that the length of the spring of the lever adjuster is 53.0 mm (2.09 in). Loosen the lock nut as necessary to make adjustment.

6. Adjust the neutral position.
   [1] Make sure that the engine has stopped.
   [2] Loosen (60° to 120°) the cam lever shaft bolt.
   [3] Tap the cam lever fulcrum (pipe portion) with a plastic hammer in the direction of the left and right arrows.
      - When the tire moves in the direction of forward travel, slide the cam lever in direction A.
      - When the tire moves in the direction of backward travel, slide the cam lever in direction B.

   [4] Slide the cam lever and tighten the cam lever shaft bolt.

7. Start the engine, and rev it up to the maximum rpm.

8. Set the 2WD/3WD selector switch to the "2WD" position.

9. Check that the tires do not move. If a tire moves even slightly, stop the engine, and then repeat steps 6. to 9.
Change of Coolant

For details on handling the engine, please refer to the Owner's Manual for the engine.

**Warning**
When changing the coolant, be sure to drain it into a container and discard it in accordance with local laws and regulations.

**Warning**
Do not touch the radiator or coolant during engine operation or immediately after the engine has been turned off. Otherwise, you may get burned due to high temperatures. After the radiator has cooled down sufficiently, open the radiator cap.

**Caution**
Change coolant after the engine has well cooled down.

**Important**
When you change coolant, be sure to use clean water, such as tap water. During winter, remove coolant. Alternatively, mix long-life coolant and clean water, and then pour it into the radiator and reserve tank.

For details on changing coolant, please refer to the separate Engine Operating Manual. Coolant quantity, including the reserve tank, is 3.1 dm³ (3.1 L).

Change of Hydraulic Oil

**Warning**
When you change the hydraulic oil, be sure to drain it into a bowl and discard it in accordance with local laws and regulations.

**Caution**
If the hydraulic oil emulsifies or if it becomes even slightly less transparent, change the oil immediately.

**Caution**
Be careful with hot oil, which could cause burns if it contacts your skin.

**Important**
Use Shell Tellus S2M46 (or equivalent) as hydraulic oil.

1. Follow the steps below to remove the old oil.
   [1] Start and run the engine to warm up the oil.
   [2] On a level surface, lower the mower units, and then stop the engine.
   [3] Remove the drain plug of the hydraulic tank and drain the old oil into a bowl.
   [4] Wind new sealing tape on the drain plug, and then install the drain plug into the hydraulic tank.

2. Remove the rear cover.

![Diagram of Change of Hydraulic Oil](pfdche-013)
3. Follow the steps below to supply new hydraulic oil. 
   The hydraulic tank capacity is approximately 26.0 dm$^3$ (26.0 L).

[1] Open the tank cap, and then supply hydraulic oil through the oil filling port until the oil level reaches the middle of the oil gauge on the hydraulic tank.

4. Start the engine, raise and lower the mower units, and turn the steering wheel left and right. Move forward and reverse repeatedly several times.

5. Raise the mower units and maintain that position on a level surface, and then check to see if the oil level is at the middle of the oil gauge. If necessary, supply oil.

6. Check underneath the machine for hydraulic oil leakage.

7. Install the rear cover.

Replacement of Hydraulic Oil Filter

**Warning**
When replacing the hydraulic oil filter, be sure to drain the oil into a container and discard it in accordance with local laws and regulations.

**Caution**
If the hydraulic oil emulsifies or if it becomes even slightly less transparent, change the oil immediately.

**Important**
Use Shell Tellus S2M46 (or equivalent) as hydraulic oil.

1. On a level surface, lower the mower units, and then stop the engine.

2. Loosen the filter case and remove it.

3. Remove the old filter cartridge.

**Warning**
Be careful with hot oil, which could cause burns if it contacts your skin.
4. Lightly coat the O-ring of the new filter cartridge with hydraulic oil, and then install the cartridge.

5. Clean the inside of the filter case.
6. Make sure that there is no damage to the O-ring of the filter case, and then lightly coat the O-ring with hydraulic oil.

7. Install the filter case onto the body, firmly hand-tighten it, and then tighten it to 25 to 35 N·m.

8. Supply hydraulic oil until it reaches the specified level.
"Hydraulic Oil Supply" (Page 4-5)

Change of Air Cleaner

For details on handling the engine, please refer to the Engine's Owner's Manual.
A contaminated air cleaner element may cause malfunction of the engine.
To maximize the life of the engine, replace the air cleaner element at the appropriate times.

1. The timing for replacing the air cleaner element is described below.
   [1] Replace the air cleaner element in accordance with the Maintenance Schedule.
   [2] If it is significantly contaminated, replace it, even if the hours of operation do not exceed the specified time.

2. Replace the air cleaner element in the same manner as cleaning the air cleaner.
   "Cleaning of Air Cleaner" (Page 4-6)
Replacement of Engine Oil

For details on handling the engine, please refer to the Owner’s Manual for the engine.

⚠️ Warning

When changing the engine oil, be sure to drain it into a container and discard it in accordance with local laws and regulations.

⚠️ Caution

Be careful with hot oil, which could cause burns if it contacts your skin.

⚠️ Important

Be sure to use engine oil that is classified as API Service Grade CF or higher, with an SAE Viscosity that is appropriate for the operating environment (ambient temperature).

⚠️ Important

Securely tighten the oil level gauge and oil filler cap.

Change the engine oil more frequently if it is contaminated and especially if you use the machine in dusty areas or operate the engine at high loads or in high temperatures.

1. Follow the steps below to remove the old engine oil.

   [1] Start and run the engine to warm up the engine oil.

   [2] With the machine on a level surface, stop the engine.

   [3] Remove the drain plug, and then drain the old engine oil into a container.

2. Remove the oil filler cap, and then supply new engine oil until the oil reaches a level in between the upper and lower limit lines on the oil level gauge.

   Engine oil quantity is approximately 3.7 dm³ (3.7 L).

3. Securely install the oil filler cap.

4. It will take a while for the supplied engine oil to descend into the oil pan.

   Check the oil level again 10 to 20 minutes after supplying the oil.
Replacement of Engine Oil Filter

For details on handling the engine, please refer to the Owner's Manual for the engine.

⚠️ Warning ⚠️
When replacing the engine oil filter, be sure to drain the engine oil into a container and discard it in accordance with local laws and regulations.

⚠️ Caution ⚠️
Be careful with hot oil, which could cause burns if it contacts your skin.

⚠️ Important ⚠️
Be sure to use engine oil that is classified as API Service Grade CF or higher, with an SAE Viscosity that is appropriate for the operating environment (ambient temperature).

⚠️ Important ⚠️
Securely tighten the oil level gauge and oil filler cap.

1. With the filter wrench, remove the old filter cartridge.

2. Lightly coat the packing of the new filter cartridge with engine oil.

3. Hand-tighten the filter cartridge until the packing contacts the sealing surface, and then firmly hand-tighten (without using a filter wrench).

4. Supply engine oil until it reaches the specified level. "Supply of Engine Oil" (Page 4-9)

5. Start the engine, and then stop it after 10 to 20 minutes.

6. Make sure that there is no oil leakage at the sealing surface of the filter cartridge.

7. Check the engine oil level. If it is low, supply engine oil until it reaches the specified level.

Replacement of Fuel Filter

If dust or dirt accumulates in the fuel filter, the fuel flow will become insufficient. Replace the fuel filter at the appropriate times. The fuel filter is on the left side under the rear right of the seat.

1. Close the fuel cock of the fuel filter.

2. Remove the ring nut, and then remove the cup.

3. Remove the filter cartridge.

4. Close the fuel cock of the fuel filter.

Maintenance (Main Body)
3. Clean the inside of the filter cup with diesel fuel.

**Important**

During installation, prevent contamination with dirt or dust. If the fuel is contaminated with dirt or dust etc., the fuel injection pump and injection nozzle will become worn.

4. Install a new fuel filter, and then correctly install all parts in their original positions.

5. Fill up the fuel tank with fuel, and then open the fuel cock.

**Note:**

Air bleeding is not required since it occurs automatically.

### Change of Fuse

**Fuse Box**

**Warning**

Before performing maintenance on the electrical system, be sure to disconnect the negative terminal of the battery.

**Caution**

If a fuse blows, a short may have occurred within the electrical circuit. Check for the cause, such as faulty terminal connections, damaged wiring or terminals, or incorrect wiring.

The fuse box includes spare fuses and tools.

The machine uses a mini fuse for automobiles. Replace an old fuse with a new fuse of the specified capacity.
### Fusible Link

Fuse capacities of the fusible links are 30 A and 50 A.

EU Declaration of Conformity

Product Identification
- Product: Lawnmower
- Make: BARONESS
- Type: LM331
- Version(s): Not Applicable
- Starting Serial No.: 10001
- Guaranteed Sound Power Level:
  - LWA: 99.24 dB
  - LWA: 103 dB
- Manufacturer Name: Kyeoehsa Co., Ltd.
- Address: 1-26 Miyuki-cho, Toyokawa, Aichi-pref., Japan

Conforms to the following Directives:
- 2006/42/EC: Machinery (MD)
- 2014/30/EU: Electromagnetic compatibility (EMC)
- 2000/14/EC: Noise emissions from outdoor equipment
- ISO 5395-1: 2013 (2006/42/EC)
