

BARONESS

MACHINERY IDENTIFICATION

HAND MOWERS

There have been many Baroness hand-mower models over the years which are not always easy to identify. Although all Baroness machines are provided with serial numbers, it is not always possible to identify older models from this information. Therefore when trying to identify a Baroness hand-mower please ask the following questions:

- Width of cut. Usually it will be 22 or 26 inches (56 or 66cm)
- Engine fitted. Usually it will be a Robin EY15 (early models) or Robin EX13 (later models)
- If a groomer is fitted.
- What type of clutch lever is fitted. It will either be a squeeze type lever, similar to a bicycle brake lever (later type) or an over centre lever that is fitted to the central area of the upper handles.

Groomer

COMBINATIONS OF HAND-MOWERS WITH ROBIN EY15 ENGINE

- Robin EY15 Engine
 - 22 inch cut
 - No Groomer
 - Over-centre clutch lever
- LM22GE or Early LM22GF (LM22GF had a dead man's handle with a micro-switch to kill engine. Please state clutch type not squeeze type.
