"Required reading"
Read this manual and the Owner's Manual for the engine before using the machine.
California Proposition 65
(For California, USA)

⚠️ WARNING:
Operating, servicing and maintaining a passenger vehicle or off-road vehicle can expose you to chemicals including engine exhaust, carbon monoxide, phthalates, and lead, which are known to the State of California to cause cancer and birth defects or other reproductive harm. To minimize exposure, avoid breathing exhaust, do not idle the engine except as necessary, service your vehicle in a well-ventilated area and wear gloves or wash your hands frequently when servicing your vehicle. For more information go to www.P65Warnings.ca.gov/passenger-vehicle.

California Spark Arrester
(For California, USA)

⚠️ Warning
Operation of this equipment may create sparks that can start fires around dry vegetation.
A spark arrester may be required.
The operator should contact local fire agencies for laws or regulations relating to fire prevention requirements.

The DPF installed on the engine of this machine meets requirements of California Public Resource Code Section 4443.

EU Emission Control (Stage V)
(For Europe)

⚠️ Important
No deliberate tampering with or misuse of the engine emissions control system should take place.
Make repairs immediately if the fault codes of PCD (Particulate Control Diagnostic) and NCD (NOx Control Diagnostic) appear.
Tampering with and use without effect of the engine emissions control system are regulatory infringements and they are penalized.
Thank you for purchasing the Baroness product. This manual describes the proper handling, adjustment, and inspection of your product. We hope you will use the product safely, and take advantage of its best performance.

Keeping The Owner's Operating Manual

Keep this Manual in the bag located in the rear of the seat.

1 Bag
Read this manual carefully to ensure that you thoroughly understand how to properly operate and maintain the product, and to avoid causing injury to yourself or others.
The operator is responsible for operating the product properly and safely.
Maintenance should only be performed by a certified specialist.
If you have any questions concerning maintenance or genuine parts, please contact a Baroness dealer or Kyoeisha.
When making inquiries about the product, please specify the product’s model designation and serial number.
When loaning or transferring the product, please also provide this manual together with the product.

Kyoeisha Co., Ltd.

**Warning Symbols**

This manual uses the following warning symbols for handling precautions that are important for your safety.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="696cq5-001.png" alt="Danger" /></td>
<td>This symbol indicates that serious injury or death will occur if the warning is ignored.</td>
</tr>
<tr>
<td><img src="696cq5-001.png" alt="Warning" /></td>
<td>This symbol indicates that serious injury or death may occur if the warning is ignored.</td>
</tr>
<tr>
<td><img src="696cq5-001.png" alt="Caution" /></td>
<td>This symbol indicates that injury or damage to property may occur if the warning is ignored.</td>
</tr>
<tr>
<td><img src="696cq5-001.png" alt="Important" /></td>
<td>This symbol indicates precautions on the mechanism of the machine.</td>
</tr>
</tbody>
</table>

Failure to adequately follow these safety precautions may cause an accident.
**Purpose**

This product is intended for cutting turf grass at golf courses. Do not use this product in any way other than its intended purpose, and do not modify this product. Operating this product for other purposes and modifying it may be very dangerous and may cause damage to the product. In addition, this product is not authorized for operation as a special motor vehicle. Do not operate it on public roads.

Failure to adequately follow these safety precautions may cause an accident resulting in injury or death.

**Danger**

This product is designed to ensure safe operation and has been tested and inspected thoroughly before shipment from the factory. The product is equipped with safety devices to prevent accidents. However, whether the product demonstrates its original performance level depends on the manner in which it is operated and handled, as well as the manner in which it is managed on a daily basis. Inappropriate use or management of the product may result in injury or death. Observe the following safety instructions to ensure safe operation.

### Safe Operating Practices

#### Training

1. Read this manual and other training material carefully. Be familiar with the controls, safety signs, and the proper use of the equipment.
2. If the operator or mechanic cannot read English it is the owner's responsibility to explain this manual to them.
3. All operators and mechanics should seek and obtain professional and practical instruction. The owner is responsible for training the users. Such instruction should emphasize.
   - [1] The need for care and concentration when working with ride-on machines.
   - [2] Control of a ride-on machine sliding on a slope will not be regained by the application of the brake.
3. The main reasons for loss of control are:
   - Insufficient wheel grip
   - Being driven too fast
   - Inadequate braking
   - The type of machine is unsuitable for its task
   - Lack of awareness of the effect of ground conditions, especially slopes
   - Incorrect hitching and load distribution
4. Never allow children or people unfamiliar with these instructions to use or service the machine. Local regulations may restrict the age of the operator.
5. The owner/user can prevent and is responsible for accidents or injuries occurring to themselves, other people, or property.
6. Keep in mind that the owner, operator, and mechanic are responsible for accidents or hazards occurring to other people or their property.
7. The ROPS is an integral and effective safety device. Do not remove or alter the ROPS.
8. Replace a damaged ROPS. Do not repair or alter.
9. You can find additional safety information where needed throughout this manual.
10. Determine the left and right sides of the machine from the normal operating position.

#### Preparation

1. Evaluate the terrain to determine what accessories and attachments are needed to properly and safety perform the job. Only use accessories and attachments approved by the manufacturer.
2. While operating, always wear substantial footwear, long trousers, hard hat, safety glasses, and ear protection. Long hair, loose clothing, or jewelry may get tangled in moving parts. Do not operate the equipment when barefoot or wearing open sandals.
3. Inspect the area where the equipment is to be used and remove all objects such as rocks, toys and wire which can be thrown by the machine.
4. Keep children out of the operating area and under the watchful care of a responsible adult other than the operator.
5. Exercise care in the handling of fuel.

**Warning**

Warning—Fuel is highly flammable. Take the following precautions.

[1] Store fuel in containers specifically designed for this purpose.
Add fuel before starting the engine. Never remove the cap of the fuel tank or add fuel while the engine is running or when the engine is hot.

Refuel outdoors only and do not smoke while refueling.

If fuel is spilled, do not attempt to start the engine but move the machine away from the area of spillage and avoid creating any source of ignition until petrol vapours have dissipated.

Replace all fuel tanks and container caps securely.

Check that operator’s presence controls, safety switches and shields are attached and functioning properly. Do not operate unless they are functioning properly.

If the brake operation is faulty or the parking brake lever has noticeable play, be sure to adjust or repair them before operating the machine.

Replace faulty mufflers.

Before using, always visually inspect to see that the blades, blade bolts, and cutting assembly are not worn or damaged. Replace worn or damaged blades and bolts in sets to preserve balance.

On multi-bladed machines, take care as rotating one blade can cause other blades to rotate.

**Operation**

1. Do not operate the engine in a confined space where dangerous carbon monoxide fumes can collect.
2. Only operate in good light, keeping away from holes and hidden hazards.
3. Before attempting to start the engine, disengage all attachments, shift into neutral, and engage the parking brake. Only start engine from the operator’s position. Use seat belts if provided.
4. Remember there is no such thing as a safe slope. Travel on grass slopes requires particular care. To guard against overturning:
   - Do not stop or start suddenly when going up or downhill.
   - Engage clutch slowly, always keep machine in gear, especially when traveling downhill.
   - Machine speeds should be kept low on slopes and during tight turns.
   - Stay alert for humps and hollows and other hidden hazards.
   - Never operate across the face of the slope, unless the machine is designed for this purpose.
   - Never drive the machine on a slope with an angle of gradient that is greater than that specified or in a place where there is a danger of the machine slipping.
5. Use extra care while operating machine with a grass catcher or other attachments. They can affect the stability of the machine.
6. Never raise the mower deck with the blades running.
7. Never operate the machine with damaged guards, shields, or without safety protective devices in place. Be sure all interlocks are attached, adjusted and functioning properly.
8. Do not change the engine governor settings or overspeed the engine. Operating the engine at excessive speed may increase the hazard of personal injury.

Do the following before leaving the operator’s position.

1. Stop on level ground.
2. Disengage the power take-off and lower the attachments.
3. Change into neutral and set the parking brake.
4. Stop the engine and remove the key.

Disengage the drive to attachments, stop the engine, and remove the ignition key in the following conditions.

1. Before refueling.
2. Before making height adjustment unless adjustment can be made from the operator’s position:
4. Before checking, cleaning or working the machine.
[5] After striking a foreign object or if an abnormal vibration occurs.
   Inspect the machine for damage and make repairs before restarting and operating the equipment.
11. Keep hands and feet away from the cutting units and the rotating parts.
12. Do not mow in reverse unless absolutely necessary.
    Always look down and behind before and while backing.
13. Do not carry passengers.
14. Never operate while people, especially children, or pets are nearby.
15. Slow down and use caution when making turns and crossing roads and sidewalks.
16. Stop the blades rotating before crossing surfaces other than grass.
17. Disengage drive to attachments when transporting or not in use.
18. When using any attachments, never direct discharge of material toward bystanders nor allow anyone near the machine while in operation.
19. Do not operate the machine under the influence of alcohol or drugs.
20. Take care when loading or unloading the machine into a trailer or a truck.
    Load or unload the machine in a flat and safe place.
    Before loading or unloading, set the parking brake on the truck or trailer, stop the engine, and chock the wheels.
    When transporting the machine on a truck or a trailer, set the parking brake, stop the engine, and fasten the machine to the truck with a rope or other suitable restraining device that has sufficient strength.
    When using a running board, select one with sufficient strength, length, and width and that will not cause the machine to slip.
21. Close the fuel valve before transporting the machine.
22. Use care when approaching blind corners, shrubs, trees, or other objects that may obscure vision.
23. Do not take your eyes off the road ahead.
    Do not operate the machine with no hands.
24. Reduce the throttle setting during engine run-out and, if the engine is provided with a shut-off valve, turn the fuel off at the conclusion of operation.
25. Do not operate the machine when there is the risk of lightning.

**Maintenance and Storage**

1. Disengage drives on level ground, lower the attachments, set parking brake, stop engine and remove key from ignition.
   Wait for all movement to stop before adjusting, cleaning or repairing.
2. When machine is to be parked, stored, or left unattended, lower the mower decks unless a positive mechanical lock is provided.
3. To reduce the fire hazard, keep the engine, silencer/muffler, battery compartment fuel storage area, cutting units and drives free of grass, leaves, or excessive grease.
   Clean up oil or fuel spillage.
4. Allow the engine to cool before storing in any enclosure.
5. Only cover the machine with a sheet after hot parts have sufficiently cooled down.
6. Never store the equipment with fuel in the tank inside a building where fumes may reach an open flame or spark.
7. If the engine is provided with a shut-off valve, shut off valve while storing or transporting.
8. Do not store fuel near flames.
9. Never allow untrained personnel to service machine.
10. Allow the engine/muffler to cool before checking/maintenance.
11. Appropriately manage and correctly use the tools necessary for servicing or adjusting the machine.
12. Use jack stands to support components when required.
13. Carefully release pressure from components with stored energy.
14. Be sure to depressurize the hydraulic system before performing maintenance operations on it such as removing hydraulic equipment.
15. Check whether line connectors in the hydraulic system are properly tightened.
    Before applying hydraulic pressure, check the connections of the hydraulic pressure lines and the condition of the hoses.
16. When checking the hydraulic circuit for pinhole leaks or oil leakage from nozzles, do not use your hands. Use items such as paper or corrugated cardboard to find leakage points. Be extremely careful with high-pressure oil as it may pierce your skin, result. If fluid is injected into the skin it must be surgically removed within a few hours by a doctor familiar with this form of injury or gangrene may result.

17. Disconnect battery before making any repairs.
   Disconnect the negative terminal first and the positive last.
   Reconnect positive first and negative last.

18. Make sure that parts such as wires are not touching each other and that their covers have not come off.

19. Use care when checking the blades.
   [1] Wrap the blades or wear gloves, and use caution when servicing them.
   [3] Never straighten or weld them.

20. On multi-banded machines, take care as rotating one blade can cause other blades to rotate.

21. Keep hands and feet away from moving parts.
   If possible, do not make adjustments with the engine running.

22. Charge batteries in an open well ventilated area, away from spark and flames.
   Unplug charger before connecting or disconnecting from battery.
   Wear protective clothing and use insulated tools.

23. Keep all parts in good working condition and all hardware tightened.
   Replace all worn or damaged decals.

24. Keep all nuts, bolts and screws tight to be sure the equipment is in safe working condition.

25. If the fuel tank has to be drained, do this outdoors.

26. Swallowing engine coolant can cause injury or death; keep out of reach from children and pets.
Recycle and Waste Disposal

About Recycle

Recycling battery etc. is recommended for environmental conservation and economical use of resources.
It may be required by local laws.

About Waste Disposal

Make sure that waste generated when servicing or repairing the machine is disposed of in accordance with local regulations.
(e.g. waste oil, antifreeze, rubber products, and wires etc.)

* The factory default maximum engine rpm is 2,600 rpm.
Sound Pressure Level

This machine was confirmed to have a continuous A-weighted sound pressure level of 90dB by measuring identical machines in accordance with the procedure specified in ISO 5395-1:2013.

Sound Power Level

This machine was confirmed to have a sound power level of 105dB by measuring identical machines in accordance with the procedure specified in directive 2000/14/EC.

Vibration Level

Hand-Arm Vibration

This machine was confirmed not to exceed a vibration level of 2.5 m/s² to hands and arms by measuring identical machines in accordance with the procedure specified in ISO 5395-1:2013.

Whole Body Vibration

This machine was confirmed not to exceed a vibration level of 0.5 m/s² to the whole body by measuring identical machines in accordance with the procedure specified in ISO 5395-1:2013.
Carbon Dioxide (CO₂) Emissions Measurement

For CO₂ emissions measurement on the engine of this machine, refer to the engine's owner's manual.

Description of Regulation Decals

Serial Number Plate

The serial number plate indicates the model and serial number of the machine.

Year of Manufacture Decal

(For Europe)
The year of manufacture decal indicates the year when this machine was manufactured.

Specification Decal

(For Europe)
The Specification decal indicates the CE marking, model, and weight, etc.

Noise Emission Decal

(For Europe)
The noise emission decal indicates the sound power level determined by measuring identical machines in accordance with the procedure specified in the EC directives.
ROPS Compliance Decal

The ROPS compliance decal indicates the manufacturer, model, etc., in accordance with International Standard ISO 21299:2009.

ROPS Caution Decal

ROPS caution decal describes the following caution messages.

- Replace damaged ROPS.
- Do not repair or revise.

Battery Capacity Decal

(For Europe)
The battery capacity decal indicates the capacity by 20HR and CCA.

Recycle Decal

Recycle Decal illustrates Recycle Mark in accordance with local regulation.

(For Europe)

Battery Danger Decal

(For USA)
Battery Danger Decal describes handling precautions for battery.
Indicating Diesel Fuel Decal

(For USA)
Indicating diesel fuel decal describes the type of fuel to be used.
Use Ultra Low Sulfur Diesel Fuel (sulfur-free diesel).

ULTRA LOW SULFUR DIESEL FUEL ONLY
K4209001530

California Proposition 65 Decal (Riding Type)

(For the State of California, USA)
California Proposition 65 decal describes the warning messages as required by California Proposition 65.

Spark Arrester Warning Decal

(For the State of California, USA)
Spark arrester warning decal describes the warning messages as required by California Public Resources Code.
Safety Signs and Instruction Signs

About Safety Signs and Instruction Signs

Important

Safety decals and instruction decals are attached to this product. Make sure that they are preserved in their entirety. If they are damaged, become dirty, or peel off, replace them with new ones.

Part numbers for decals that need to be replaced are listed in the parts catalog. Order them from a Baroness dealer or Kyoeisha.

Description of Safety Decals and Instruction Decals

Operation Decal

GM2810A0902Z0
Decal, operation

1. Warning
Read the Owner's Operating Manual.

2. Warning
Apply the parking brake, stop the engine, remove the ignition key, and then leave the machine.

3. Caution
Flying objects - Be sure that people around the machine keep a safe distance away.

4. Warning
May cut your hand or leg - Keep hands and feet away from moving parts.

5. Caution
Rollover - Do not work on slopes of 15 degrees or more. When you descend a slope, lower the mower decks and then drive at low speed. For ROPS equipped machine, fasten your seatbelt.

Engine Start/Stop Decal

K4205001630
Decal, start/stop engine

1. Warning
Read the Owner's Operating Manual.

2. Procedure to Start Engine
Read the Owner's Operating Manual.
[1] Sit on the seat.
[2] Turn the key to the "ON (GLOW)" position, and then wait for the logo "BARONESS" to be turned off.
[3] Turn the key to the "START" position.
[4] Depress the brake pedal to release the parking brake.

3. Procedure to Stop Engine
Read the Owner's Operating Manual.
[1] Set the knife rotation switch to the "Stop" position, and then raise the mower decks.
[3] Turn the key to the "STOP" position, and then remove it.
Caution to Mutilation Decal

K4205001600
DECAL, CAUTION TO MUTILATION

⚠️ Warning
May cut your hand or leg - Stop the cutter rotation and engine. Otherwise you may get injured.

Caution to Mutilation Decal_001

Caution for High Temperatures Decal

K4205001920
Decal, caution for high temperatures

⚠️ Caution
High temperature - Do not touch. Otherwise, you will get burned.

Caution for High Temperatures Decal_001

Caution to Injury Decal

K4205001580
Decal, caution to injure

⚠️ Caution
May pinch - There is a risk of being pinched.

Caution to Injury Decal_001

Caution to Rotating Object Decal

K4205001530
Decal, caution to rotating object

⚠️ Warning
Watch for rotating parts - Keep your hands away from the belts while the engine is running.

Caution to Rotating Object Decal_001
Hydraulic Oil Icon
K4209000980
Hydraulic oil icon
Read the Owner's Operating Manual.

Diesel Fuel Icon
K4209001000
Diesel fuel icon
Use diesel fuel.

Fire Prohibited Decal
K4205001940
Decal, fire prohibited

Warning
Keep away from fire.

Caution for Mower Lock Decal
K4205001900
Decal, caution for mower lock
Lock the mower decks when traveling or storing with the mower decks #4 and 5 raised.
Caution for Spouting Coolant Decal
K4205001970
Decal, caution for spouting coolant

⚠️ Caution
Caution for spouting coolant - Do not open while hot.
High temperature - Do not touch. Otherwise, you will get burned.

Caution to Flying Object Decal
K4205001650
Decal, caution to flying object

⚠️ Caution
Caution to flying object - Be sure that people around the machine keep a safe distance away.

Caution to Getting Pinched Decal
K4205001930
Decal, caution to getting pinched

⚠️ Caution
May pinch - There is a risk of being pinched.

Caution for Hand or Leg Injury Decal
K4205001780
Decal, caution for hand or leg injury

⚠️ Warning
May cut your hand or leg - When the blades are rotating, keep away from the machine.
Caution Exhaust Gas Decal

Inspections

Inspect the machine according to the maintenance schedule so that you will be able to take advantage of its optimum performance for a long period of time.

Rotary Knife

Inspection of Rotary Knife

⚠️ Caution

The rotary knife is an edged tool. Handle them carefully, since they could cut your hands or legs.

⚠️ Caution

When touching edged tools, wear gloves, since they could cut your hands.

Due to frequent use, objects crushed during mowing, or damage during transportation and so forth, the rotary knife may vibrate from imbalance or become dull. Inspect the rotary knife, and if necessary, resharpen, balance or replace it.

Important

Frequently inspect the rotary knife since it may become dull quickly if the machine is operated in an environment of dry soil or sand.

1. Make sure that the rotary knife is not bent.
2. Make sure that the rotary knife is not chipped.
3. Check to see how much the rotary knife is worn.
4. Make sure that the rotary knife is not worn asymmetrically.
5. Make sure that the mounting bolt for the rotary knife is not loose.

6. Make sure that there are no cracks or tears between the sail and flat part of the rotary knife.

Radiator Cover

Inspection of Radiator Cover

1. Make sure that there is no damage to the radiator cover.
2. Make sure that the radiator cover is not contaminated.

Cleaning of Radiator Cover

Important

An unclean radiator cover may cause overheating or damage to the engine. It may also cause malfunction of the hydraulic system.

If the radiator cover has been contaminated with dust, be sure to clean it. After operating the machine in a dusty environment, it is important to remove dust from the cover as soon as possible.

1. Open the radiator cover.
2. Carefully clean the front and back of the radiator cover with water or compressed air.

Radiator

Inspection of Radiator

1. Make sure that there is no damage to the radiator.
2. Make sure that the radiator is not contaminated.

Cleaning of Radiator

Important

An unclean radiator may cause overheating or damage to the engine. It may also cause malfunction of the hydraulic system.

Important

Do not use solid objects, such as a spatula or screwdriver, or high-pressure water to clean the radiator or oil cooler. Otherwise, special fins or tubes may be damaged, possibly resulting in reduced cooling performance or coolant leakage.

If the radiator has been contaminated with dust, be sure to clean it. After operating the machine in a dusty environment, it is important to remove dust as soon as possible.
1. Open the radiator cover.
2. Unlock the rubber catches on the left and right of the oil cooler, and then tilt the oil cooler.

3. Carefully clean the front and back of the radiator with water or compressed air.

Coolant

Inspection of Coolant

⚠️ Caution

Do not touch the radiator or coolant during engine operation or immediately after the engine has been turned off. Otherwise, you may get burned.

⚠️ Caution

Inspection should take place after the engine has well cooled down.

1. Make sure that the coolant level in the reserve tank is between "FULL" and "LOW".
Coolant Supply

**Caution**
Do not touch the radiator or coolant during engine operation or right after the engine has been turned off. Due to high temperatures, doing so could cause burns.

**Caution**
Supply coolant after the engine has well cooled down.

**Caution**
The radiator cap is pressurized. If you remove the radiator cap while the engine is overheated, hot steam will burst out, possibly resulting in burns. Make sure that the water temperature and pressure are reduced, and then grab the cap with a thick cloth and gradually open the cap.

**Important**
When you supply coolant, be sure to use clean water, such as tap water.

**Important**
Tightly close the radiator cap. If the cap is loose or incorrectly installed, water may leak and the engine may overheat.

1. If the coolant level in the reserve tank is lower than the "LOW" mark, open the reserve tank cap and fill the tank with clean water up to the "FULL" mark.

2. If no coolant is in the reserve tank, follow the steps below to fill the tank with clean water.
   
   [1] Open the radiator cap, and then supply clean water up to the opening.
   
   [2] Open the reserve tank cap, and then supply clean water up to the "FULL" mark.

---

**Oil Cooler**

**Inspection of Oil Cooler**

1. Make sure that there is no damage to the oil cooler.
2. Make sure that the oil cooler is not contaminated.

**Cleaning of Oil Cooler**

**Important**
An unclean oil cooler may cause malfunction of the hydraulic system.

**Important**
Do not use solid objects, such as a spatula or screwdriver, or high-pressure water to clean the radiator or oil cooler. Otherwise, special fins or tubes may be damaged, possibly resulting in reduced cooling performance or coolant leakage.

If the oil cooler has been contaminated with dust, be sure to clean it. After operating the machine in a dusty environment, it is important to remove dust as soon as possible.

1. Open the radiator cover.
2. Unlock the rubber catches on the left and right of the oil cooler, and then tilt the oil cooler.

3. Carefully clean the front and back of the oil cooler with water or compressed air.

Hydraulic Oil

Inspection of Hydraulic Oil

The oil gauge is on the side of the hydraulic tank.

1. Raise the mower decks and maintain that position on a level surface.
2. Make sure that the oil level is at the middle of the oil gauge.

3. Check underneath the machine for oil leakage.

Hydraulic Oil Supply

Important

Use Shell Tellus S2M46 (or equivalent) as hydraulic oil.

1. If the oil level is low, remove the left tank cover, and then open the tank cap and supply oil.
2. Tighten the tank cap securely.
3. Start the engine, raise and lower the mower decks, and turn the steering wheel left and right. Move forward and reverse repeatedly several times.
4. Raise the mower decks and maintain that position on a level surface, and then check to see if the oil level is at the middle of the oil gauge. If necessary, supply oil.
5. Check underneath the machine for oil leakage.
6. Attach the left tank cover.
Inspection of Air Cleaner

Liners and piston rings so that the engine will always operate smoothly.
A contaminated air cleaner element may cause malfunction of the engine.
1. Inspect the air cleaner by checking the vacuum indicator.
   If the air cleaner element is contaminated, the vacuum indicator will display a red ring.

2. Make sure that there is no damage to the air cleaner.
3. Make sure that the air cleaner is not contaminated.

Cleaning of Air Cleaner

A contaminated air cleaner element may cause malfunction of the engine.
To maximize the life of the engine, clean the air cleaner properly.

1. Follow the steps below to clean the outer element.
   [1] Remove the clips from the three locations, remove the air cleaner cap, and then remove the outer element.
   [2] While paying close attention not to damage the outer element, tap a solid portion of the outer element or blow compressed air from its inside to remove dust and dirt.
   If the outer element is extremely contaminated, replace it with a new one.

   [3] Attach the outer element to the air cleaner body.
   [4] Replace the air cleaner cap, and then fix it securely using the clips.

---

Important

The inner element cannot be cleaned.

---

Battery

Inspection of Battery

⚠️ Danger
Keep away from fire while inspecting or charging the battery. The battery may explode.

⚠️ Warning
Do not allow the battery fluid level to become lower than the LOWER LEVEL (minimum fluid level line). The battery may explode if it is used or charged while the battery fluid level is at the LOWER LEVEL (minimum fluid level line).

⚠️ Caution
Perform operations after the muffler and engine have sufficiently cooled. Otherwise, you may suffer burns.

1. Clean the areas around the battery fluid level lines using a cloth damped with water.
2. Make sure that the battery fluid level is between the UPPER LEVEL (maximum fluid level line) and the LOWER LEVEL (minimum fluid level line).

Supply of Battery Fluid

⚠️ Danger
Be careful not to let your skin, eyes or clothes, etc., come into contact with the battery fluid or accidentally swallow the fluid. Should your skin or clothes come into contact with the battery fluid, immediately wash them away with water.

⚠️ Warning
When you supply battery fluid, wear protective garments and safety glasses, etc.

⚠️ Caution
Implement after the engine and muffler etc. have well cooled down. Otherwise you may get burned.

1. If the battery fluid level is lower than halfway between the UPPER LEVEL (maximum) line and LOWER LEVEL (minimum) line, add purified water up to the UPPER LEVEL (maximum) line.

1. UPPER LEVEL

2. LOWER LEVEL

*Figures: 48yhlu-006*
Tire

Inspection of Tires

1. Check the pneumatic pressure of the tires.
2. Make sure that there are no cracks, damage or abnormal wear.

<table>
<thead>
<tr>
<th>Tire size</th>
<th>Pneumatic pressure</th>
</tr>
</thead>
<tbody>
<tr>

<td>150 kPa (1.5 kgf/cm²)</td>
</tr>
<tr>
<td>Rear wheel (20 x 12.00 -10)</td>
<td>140 kPa (1.4 kgf/cm²)</td>
</tr>
</tbody>
</table>

Brake

Inspection of Brake

While traveling, depress the brake pedal firmly to make sure that the brake is applied effectively.

Inspection of Parking Brake

1. Make sure that the parking brake is applied after depressing the brake pedal and pulling the parking brake lever.
2. Make sure that the parking brake is not applied even slightly after depressing the brake pedal to release the parking brake lever.

Belt

Inspection of Belt

Warning

The engine must be stopped when the belt is inspected.

Important

A slacking or damaged belt or damaged fan may cause overheating or lack of a battery charge.

1. Press the middle of the belt with your finger to check the belt tension.
2. Make sure that there are no cracks, damage or abnormal wear.

Wire

Inspection of Wire

1. Make sure that the wire is not cracked or damaged.

Around The Engine

Inspection of Engine-Associated Parts

Caution

Implement after the engine and DPF etc. have well cooled down. Otherwise you may get burned.

1. Check the fuel system parts for loosened or cracked joints and leakage. Replace the parts if necessary.
2. Blow compressed air to clean any grass or flammable materials that may be attached on or around the DPF. Remove clippings and dust in a gap thoroughly due to the intricately shaped engine.

Engine Oil

Inspection of Engine Oil

Important

Securely tighten the oil level gauge and oil filler cap.

1. Stop the engine, wait for 10 to 20 minutes for the engine to cool down, and then check the oil level.
2. Position the machine so that the engine will be level, and then insert the oil level gauge all the way to check the oil level.
3. The appropriate oil level should be between the upper and lower limit lines on the gauge.

2. Replace the oil filler cap.

3. It will take a while for the supplied engine oil to descend into the oil pan. Check the oil level again 10 to 20 minutes after supplying the oil.

**Supply of Engine Oil**

**Important**
Do not supply too much engine oil. Otherwise, the engine may be damaged.

**Important**
Do not mix different types of engine oil.

**Important**
Be sure to use engine oil that is classified as JASO DH-2 or API Service Grade CJ-4, with SAE viscosity that is appropriate for the operating environment (ambient temperature).

**Important**
Securely tighten the oil level gauge and oil filler cap.

1. If the engine oil level is lower than the lower limit line on the oil level gauge, supply engine oil through the oil filling port. Remove the oil filler cap, and then supply new engine oil until the oil reaches a level in between the upper and lower limit lines on the oil level gauge.

**Fuel**

**Inspection of Fuel Quantity**

With the machine on a level surface, observe the fuel level in the monitor to check the fuel level.
Fuel Supply

**Warning**
Do not supply additional fuel after the fuel level indicates 100%.
If you supply too much fuel, it might overflow from the fuel cap when you travel or work on a slope.

**Warning**
Keep fire away while refueling.
Do not smoke.

**Important**
Use ultra-low sulfur diesel fuel (sulfur-free diesel fuel).

**Important**
In case of lack of fuel, DPF regeneration can not be performed.

If the monitor displays the warning message "FUEL LEVEL LOW", immediately stop operation, and then supply fuel (diesel). The fuel tank capacity is approximately 51.0 dm³ (51.0 L).

Note:
The factory default low fuel level is 10%. The level can be changed optionally.

Water Separator

**Important**
If water contaminates the fuel, the supply pump and injector may seize.

The water separator removes water from the fuel.
1. Make sure that debris and water have not accumulated in the cup. With the float raised, water incorporation is confirmed.

Air Bleeding of Fuel System

1. Open the hood.
2. Set the key switch to the "ON" position and then start the electromagnetic pump.
3. A priming pump is installed on the feed pump.
   Repeatedly press the top of the priming pump with your finger until resistance is felt, to bleed air.
4. Set the key switch to the "OFF" position.
5. Close the hood.
Draining of Water Separator

For details on handling the engine, please refer to the Engine’s Owner’s Manual.

**Important**

If water contaminates the fuel, the supply pump and injector may be burnt out.

Drain the water at least every 50 hours and whenever the float is raised by water.

1. Follow the steps below to drain the water.
   [1] Stop the engine, and then turn the key switch to the "OFF" position.
   [2] Place a container under the water separator.
   [3] Loosen the water drain plug and air-bleeding bolt to drain the water into the container.

   [5] Bleed air from the fuel system.

Cleaning of Water Separator

For details on handling the engine, please refer to the Engine's Owner's Manual.

**Important**

If water contaminates the fuel, the supply pump and injector may be burnt out.

Clean the water separator at least every 500 hours and whenever debris has accumulated in the cup.

1. Follow the steps below to clean the water separator.
   [1] Stop the engine, and then turn the key switch to the "OFF" position.
   [2] Place a container under the water separator.
   Replace the element with a new one when replacement needed.
   [4] Install the cup, element and float in their original positions.
   [5] Bleed air from the fuel system.
Fuel Filter

Inspection of Fuel Filter

The fuel filter is positioned between the fuel strainer and the engine, and cleans the fuel flowing into the carburetor. When the fuel flow becomes insufficient, replace the fuel filter if necessary.

1. Make sure that there is no fuel leakage.
2. Make sure that the fuel filter is not damaged or dirty.

Oil Leakage

Inspection of Oil Leakage

Caution

When performing maintenance on the hydraulic system, lower the mower decks.

After approximately 50 hours of operation, some tightened portions may be loosened and oil and grease may leak.
Be sure to retighten the parts.
Check the bottom of the machine for oil and grease leakage.
Important
Refer to the Tightening Torque table.
Note that the Baroness product warranty may not apply to defects caused by incorrect or overtorque tightening, etc.

Standard Tightening Torques
Bolts and Nuts

As to the bolts and nuts without any special instruction, tighten them in appropriate tightening torque with proper tool.
Too much tightening may cause the looseness or damage of the screw.
The strength of tightening is determined by types of screws, strength, the friction of thread face or base face and others.
The table below is for the galvanized or parkerized bolts.
In case that the strength of internal thread is weak, it is not applied.
Do not use rusty or sand attached "screw."
Otherwise, it may cause insufficient tightening even if you apply the specified tightening torque.
The friction of the screw face becomes higher and the tightening torque is canceled out by the friction, therefore sufficient tightening cannot be applied.
If "screw" is wet by water or oil, do not tighten it with normal tightening torque.
If the screw is wet, the torque coefficient will get smaller and it may result in too much tightening.
Too much tightening may cause looseness by the screw stretched or result in damage.
Do not use a bolt experienced too much burden.
Using the impact wrench requires the skill.
Do exercise as much as possible for steady tightening.

## Principal Tightening Torques

Tightening Torque by Model

**GM2810A**

Tighten the following bolts and nuts at the torque specified in the table. For thread locking adhesive, apply a middle strength thread locker (ThreeBond 1322 or equivalent anaerobic sealant).

Page 4-16  |  |  |  |  

**Tightening Torques**
Adjustment before Work

Adjustment of Steering Wheel

⚠️ Warning
Since it is dangerous, do not adjust the steering wheel while traveling.

⚠️ Caution
Be sure the steering wheel position is securely locked. It may result in an unexpected accident if it becomes loose while traveling.

The steering wheel can be adjusted up or down. Adjust the position according to the operator’s body size. Shift the tilt lever to the "FREE" position, move the steering wheel to the position that suits your work requirements, and then shift the tilt lever to the "LOCK" position to secure the steering wheel in place. The tilt lever is located in the right front of the driver’s position.

![Adjustment of Steering Wheel](image)

Adjustment of Seat

Use the seat adjustment levers to adjust the seat. Adjust the position according to the operator’s body size. (#11001 - 11041)

1. Use the forward/backward adjustment lever to adjust the seat back and forth.

2. Use the backrest tilt adjustment lever to adjust the angle of the backrest.

3. Turn the suspension adjustment handle to adjust the firmness of the seat suspension. Observe the suspension adjustment scale while making adjustments. [50 - 130 kg (110.2 - 286.6 lb)]

4. Turn the armrest adjustment knob to adjust the angle of the armrests.

5. Lift the seat to adjust its height to one of three positions.

![Adjustment of Seat](image)
Use the forward/backward adjustment lever to adjust the seat back and forth.

Use the tilt adjustment lever to adjust the angle of the backrest.

Turn the suspension adjustment handle to adjust the firmness of the seat suspension. Refer to the suspension indicator while making adjustments. [45 to 130 kg (99.2 to 286.6 lb)]

Turn the armrest adjustment knob to adjust the angle of the armrests.

Turn the seat height adjustment knob to adjust the height of the seat steplessly. [0 to 60 mm (0 to 2.36 in)] Adjust the height of the seat while sitting in it.

Adjustment of Cutting Height

Cutting Height Table

The adjustment range for the cutting height is 20.0 - 91.5 mm (0.79 - 3.60 in).

Note:
The factory default cutting height is 48.0 mm (1.89 in).
Adjustment With Adjusting Collars

Adjusting collars are installed at three locations on each mower deck.

**Important**

The length of grass cut off at any one time must be no more than 30.0 mm (1.18 in).

**Important**

Do not cut off more than 1/3 of the grass height.

1. Apply the parking brake, and then lower all mower decks.
2. Stop the engine, and then remove the key.
3. Loosen the nuts securing the adjusting collars at the three locations.

4. Refer to the Cutting Height Table, and then adjust the number of adjusting collars at the three locations.

   [1] To increase cutting height:
   Remove an upper adjusting collar and insert it below.

   [2] To decrease cutting height:
   Remove a lower adjusting collar and insert it above.

5. After adjusting the adjusting collars at the three locations, firmly tighten all nuts.
Adjustment With Cutting Height Adjusting Plates

Cutting height adjusting plates are installed at three locations on each mower deck.

**Important**

The length of grass cut off at any one time must be no more than 30.0 mm (1.18 in).

**Important**

Do not cut off more than 1/3 of the grass height.

1. Apply the parking brake, and then lower all mower decks.
2. Stop the engine, and then remove the key.
3. Loosen the six bolts securing the cutting height adjusting plates at the three locations on the mower deck.

4. Refer to the Cutting Height Table, and then change the hole positions.
   
   [1] To increase cutting height:
   
   a. While lifting the handle at each location on the mower deck, remove the two bolts.
   
   b. Raise the mower deck to change the hole positions, and then temporarily secure it with the two bolts.

   [2] To decrease cutting height:
   
   a. While lifting the handle at each location on the mower deck, remove the two bolts.

   b. Lower the mower deck to change the hole positions, and then temporarily secure it with the two bolts.

After making adjustments at the three locations, firmly tighten all bolts.

Adjustment before Work
**Procedure to Start/Stop Engine**

**Start/Stop of Engine**

**Procedure to Start Engine**

⚠️ **Caution**

Before starting the engine, make sure that there are no other people or obstacles around the machine.

**Important**

When restarting the engine after it has been turned off, wait until the electromagnetic pump has fully stopped before restarting the engine. The electromagnetic pump will stop approximately 7 seconds after the key switch is turned to the "OFF" position.

**Important**

Starter operation must take 15 seconds or less.

If the engine does not start, stop using the battery for 30 to 60 seconds to avoid exhausting the battery.

1. Sit on the seat.
2. Make sure that the parking brake is applied.
3. Make sure that the knife rotation switch is in the "Stop" position.
4. Make sure that the traveling pedal is in the neutral position.
5. Move the throttle knob halfway from the "Low speed" position toward the "High speed" position.
6. Switch the ignition key to the "ON (GLOW)" position.

**Important**

When the ignition key is switched to the "ON" position, "Warming up" may appear in the monitor display. Do not start the engine until the message disappears.

7. Make sure that the glow plug is generating heat, the "BARONESS" logo or "Warming up" message appears in the monitor display, and the yellow and red LEDs are lit.

8. After the "BARONESS" logo and the yellow and red LEDs go off and the parameters (items and values such as the rotation speed) appear, immediately set the ignition key to the "START" position.

9. When the starter starts rotating and the engine starts, slowly return the ignition key to the "ON" position.

10. Move the throttle knob to the "Low speed" position, and then warm up the engine for 1-2 minutes.

11. Gradually move the throttle knob toward the "High speed" position.
Procedure to Stop Engine

1. Set the traveling pedal to the neutral position.
2. Apply the parking brake.
3. Set the knife rotation switch to the "Stop" position.
4. Shift the throttle knob to the "Low speed" position, and then idle the machine for 1-2 minutes.
5. Switch the ignition key to the "OFF" position.
6. Make sure that the engine has stopped.
7. Remove the ignition key.
8. Leave the driver's seat.

Safety Mechanisms

This machine features a safety device for starting/stopping the engine.

1. As for starting the engine, the safety device prevents the engine from starting unless it meets each of the following four conditions.
   - An operator is sitting on the seat.
   - The parking brake is applied.
   - The knife rotation switch is set to the "Stop" position.
   - The traveling pedal is set to the neutral position.

Important

When you restart the engine after the safety device stops the engine, be sure to return the ignition key to the "OFF" position first, and then restart it. Otherwise the engine does not start.

2. In the event the operator leaves the seat with the parking brake applied and the engine running, the safety device will be activated and will stop the engine under any of the following conditions:
   - The traveling pedal is not set to the neutral position. (The operator has depressed the traveling pedal.)
   - The knife rotation switch is set to the "Rotation" position.

Warning Mechanisms

This machine features warning mechanisms for overheating, the hydraulic oil and the engine.

1. If the engine water temperature exceeds 115 degrees Celsius, a buzzer will sound. (intermittent tone)
2. If the oil level in the hydraulic tank declines from the specified level by approximately 2.0 dm$^3$ (2.0 L), a buzzer will sound. (continuous tone)
3. With an engine malfunction, a monitor LED lights up and a fault code appears.

Important

When the buzzer (intermittent tone) sounds, be sure to stop operation since the engine is overheated. Do not stop the engine without idling. Allow the engine to cool down, first. Keep the engine idling for about 5 minutes before stopping. Remove dust that is jamming in the radiator, air cleaner, and etc.
Operation Method

Cautions for when You Leave The Machine

⚠️ Caution

If the brakes are not sufficiently effective, use the wheel stoppers to secure the machine.

⚠️ Caution

Never park the machine on a slope.

Positions of Operation Decals

BRAKE Decal

K4203001450
Decal, BRAKE
This indicates brake.
Proximity Sensors

There are two proximity sensors on mower arm fulcrums #4 and #5. These sensors detect the raised or lowered positions of mower decks #4 and #5. The information is related to controlling rotation and stop of the rotary knives.

Relays

The relay box is at the front of the right hood. These relays control operation of the diff-lock valve, rotation of the rotary knives, 2WD/4WD selection and traction assist selection. The operating condition can be checked by the illumination of the LEDs.

- LEDs ①, ② and ③ light up when the diff-lock valve is in the "ON" position.
- LED ④ lights up when the traction assist switch is in the "ON" position.
- LEDs ⑤ and ⑥ light up when the knife rotation switch is in the "ON" position and the mower deck is lowered.
- LED ⑦ lights up when the knife rotation switch is in the "ON" position, and then the machine enters 4WD.
- LED ⑧ lights up when the 2WD/4WD selector switch is in the "4WD" position, and then the machine enters 4WD.
**Knife Rotation Switch**

**Caution**
Set the knife rotation switch to the "Rotation" position immediately before starting cutting work. At all other times, be sure to leave the knife rotation switch set to the "Stop" position.

The knife rotation switch is located in the operation panel and operates rotation of the rotary knives of the mower decks. When the knife rotation switch is set to the "Rotation" position, the rotary knives of all mower decks will rotate. When the knife rotation switch is set to the "Stop" position, the rotary knives will stop. Note: When the mower decks are raised, the rotary knives do not rotate, even if the switch is set to the "Rotation" position.

![Knife Rotation Switch](knife_rotation_switch.png)

1. Knife rotation switch
   - A: Rotation
   - B: Stop

**2WD/4WD Selector Switch**

**Caution**
When working on a slope, be sure to use the machine in 4WD.

When traveling, be sure to stop the rotation of the rotary knives and raise the mower decks.

The 2WD/4WD selector switch is located in the operation panel. When the switch is set to the "2WD" position, the machine will be in two-wheel drive (front-wheel drive). When it is set to the "4WD" position, the machine will be in four-wheel drive. Note: When the knife rotation switch is set to the "Rotation" position, the machine enters 4WD, regardless of the position that the 2WD/4WD selector switch is set to.

![2WD/4WD Selector Switch](2wd_4wd_selector_switch.png)

1. 2WD/4WD selector switch
   - A: 4WD
   - B: 2WD
DPF Auto Regeneration Inhibit Switch

**Caution**

Normally, set the DPF auto regeneration inhibit switch to "Auto regeneration mode". However, when operating in a location where fires may occur, set the DPF auto regeneration inhibit switch to "Auto regeneration inhibit mode".

**Important**

The DPF auto regeneration inhibit switch is reset to "Auto regeneration mode" when the engine is started even if the engine was stopped with the DPF auto regeneration inhibit switch set to "Auto regeneration inhibit mode".

The DPF auto regeneration inhibit switch is located in the operation panel. The DPF auto regeneration inhibit switch is the switch for shifting between "Auto regeneration mode" and "Auto regeneration inhibit mode". With the engine running, press this switch to shift between "Auto regeneration mode" and "Auto regeneration inhibit mode".

- **Auto regeneration mode:**
  - The DPF auto regeneration inhibit switch is reset to "Auto regeneration mode" when the engine is started.
  - In "Auto regeneration mode" regeneration is automatically performed regardless of the main vehicle's travel and stop on the condition that a specific amount of PM is accumulated and the requirements for DPF regeneration are fulfilled.

- **Auto regeneration inhibit mode:**
  - In order to set to "Auto regeneration inhibit mode", press the DPF auto regeneration inhibit switch after the engine is started.
  - In "Auto regeneration inhibit mode" PM accumulates in the DPF and PM accumulation level increases.
  - Unless the operator implements regeneration on his own will, regeneration is not performed.

When the DPF auto regeneration inhibit switch is pressed and set to "Auto regeneration inhibit mode", the monitor displays Auto regeneration inhibit icon.

1 Auto regeneration inhibit icon
**DFP Parked Regeneration Switch**

**Danger**

Do not perform DPF regeneration in a location where fires may occur since it will become extremely hot around the exhaust outlet during DPF regeneration.

**Important**

If parked regeneration is not required, it will not start even if the switch is pressed.

The DPF parked regeneration switch is located in the operation panel.

The DPF parked regeneration switch is the switch for actuating parked regeneration.

When the regeneration icon is blinking, press the switch to start parked regeneration.

**Light Switch**

**Note:** Depending on the specifications, this function may not be available.

**Caution**

The lights provide auxiliary lighting.

Do not travel or operate the machine at night or under poor visibility.

The light switch is located in the operation panel.

When the switch is set to the "ON" position, the lights turn on. When it is set to the "OFF" position, the lights turn off.
Traction Assist Switch

The traction assist switch is located in the operation panel. This switch is effective to increase climbing ability when this machine is in cutting operation (4WD).

- The cylinders are pressurized even with the switch set to the "OFF" position and so the mower decks are a little raised.
- When the switch is set to the "ON" position, the traction assist mode is automatically switched and the power lifting the mower decks and climbing ability are increased.
- When the switch is set to the "ON" position and the machine is in cutting operation on a slope of 13 degrees or more, the power lifting the mower decks and climbing ability are further increased.

Note:
Tracking may be impaired if the machine is used with the switch set to the "ON" position in an area with many undulations.

Mower Deck Up/Down Lever

**Caution**
Before raising or lowering the mower decks, make sure that there are no people around the machine.

**Important**
When the mower lock levers (latches) are engaged, do not operate the mower deck up/down lever.

The mower deck up/down lever is located in the operation panel and raises or lowers the mower decks.
When the lever is shifted to the "Lower" position, the mower decks are lowered. When the lever is shifted to the "Raise" position, the mower decks are raised.
Release the lever to return it to the neutral position.

Note:
When the mower decks are raised, the rotary knives stop rotating, even if the knife rotation switch is set to the "Rotation" position.

Mower Lock Lever (Latch)

The mower lock levers (latches) are located in the foot area on the left and right sides. Hook the mower lock levers (latches) on the arms to keep the mower decks #4 and #5 raised.
The mower lock levers (latches) may be used for the following operations.
- Moving by the machine
- Transporting the machine
- Storing the machine
Throttle Knob

The throttle knob is located to the right of the driver's seat and enables you to adjust the engine rpm. Move the throttle knob toward the "High speed" position to increase the engine rpm, and toward the "Low speed" to reduce the rpm.

Note:
The factory default engine rpm (maximum) is set to 2,600 rpm.

Diff-Lock Switch

Important
Do not operate the diff-lock switch unless it is necessary.

The diff-lock switch is located below the right side of the steering wheel and engages the differential lock for the left and right front wheels.
Tilt the switch lever up or down to turn "ON" to engage the differential lock for the front wheels.
Release the switch lever to return it to the neutral position ("OFF" position) and disengage the differential lock.

Traveling Pedal

Caution
When the machine is traveling at a high speed, it will not stop immediately after you take your foot off the traveling pedal. If necessary, also use the brake.

The traveling pedals are located in the right foot area and control forward and reverse operation of the machine.
When the forward pedal (inside) is depressed, the machine travels forward. When the reverse pedal (outside) is depressed, the machine travels in reverse.
The speed changes in accordance with how much the pedal is depressed.
When you take your foot off the pedal, the machine stops automatically.
Brake Pedal

**Warning**
Link the brake pedals, except when operating the machine. Using the brake pedals without linking them may result in the machine overturning.

**Important**
When depressing the brake pedals to make turns with a small radius, obtain a sufficient awareness of the lawn and ground conditions. This may damage the lawn.

The brake pedals are located in the left foot area and operate the left and right brakes independently. By depressing the brake pedal on the side in which the turn will be made, the machine can make turns with a small radius. If the front wheel on the upward side of a slope slips, depress the brake pedal for the wheel on the upward side in order to increase the traction of the wheel on the downward side and stabilize travel.

Change of Braking Method

Follow the procedure below to change the braking method from linked to independent.

1. Swing up the pedal link bar, and then pull it out from the right brake pedal.

2. Secure the pedal link bar in the holder on the left brake pedal.

<table>
<thead>
<tr>
<th>Pedal link bar</th>
<th>Swing up</th>
<th>Pull out</th>
</tr>
</thead>
<tbody>
<tr>

<td></td>
</tr>
</tbody>
</table>
Parking Brake Lever

**Caution**

Never park the machine on a slope.

**Important**

Be sure to release the parking brake before driving.
It may result in the brakes or hydraulic system malfunction.

The parking brake lever is located to the left of the front cover.
When parking, link the left and right brake pedals by using the pedal link bar, depress both brake pedals, and then pull the parking brake lever completely.
To release the parking brake, depress the brake pedals.

Hood

**Caution**

Do not open the hood in strong winds.

**Caution**

Be careful not to pinch your fingers when you open or close the hood.

1. Unlock the rubber catch, and then lift up the hood.
2. Hook the hood support rod onto the latch inside the hood.
   Make sure that the hood will not close, and then remove your hands.
**Underseat Cover**

**Caution**
Be careful not to pinch your fingers when you open or close the underseat cover.

1. Make sure that the steering wheel is raised completely.
2. Bring the seat to the backmost position.
3. Pull up the lever behind the seat to unlock it.

4. Tilt the seat forward to open the cover.
   To close the cover, slowly lower the seat.

**Instruments**

**Description of Monitor**

The monitor displays various information about the machine, such as the operating status and fault conditions.

The information of desired items can be confirmed according to operating the keys.

1. Monitor display
   Displays machine conditions and items.
2. LED (yellow)
   Lights up when a malfunction is detected, indicating warning and/or caution on the engine.
3. LED (red)
   Lights up when a critical malfunction on the engine is detected.
4. Enter key
   Selects the menu or parameter.
   Switches between displaying/hiding the current fault code.
5. Right arrow key
   Scrolls the screen.
   Move the parameter selection to the right or down.
6. Left arrow key
   Scrolls the screen.
   Move the parameter selection to the left or up.
7. Menu key
   Opens or exits the menu.
Displayed Icon

The icon appears at the top of the monitor display.

1. Regeneration icon
   The regeneration icon appears with DPF regeneration request or during DPF regeneration.
   - DPF regeneration request: Blinking
   - During DPF regeneration: Lighting

2. Auto regeneration inhibit icon
   The auto regeneration inhibit icon lights up when the DPF auto regeneration inhibit switch is set to the "Auto regeneration inhibit mode".

3. High exhaust temperature icon
   The high exhaust temperature icon lights up when the exhaust temperature reaches 450 °C during DPF regeneration.

4. Warning mark
   The warning mark continues to be displayed in the upper right corner of the monitor display if the warning message ignored and the Enter key pressed to hide the message.
   - Service reminders
   - Low fuel level
   - Fault codes

Main Menu Items

While any parameter is displayed, press the menu key to display the main menu with the following 11 items.

- GO TO 1-UP DISPLAY / GO TO 4-UP DISPLAY
- LANGUAGES
- STORED CODES
- ENGINE CONFIGURATION
- SETUP 1-UP DISPLAY
- SETUP 4-UP DISPLAY
- SERVICE REMINDERS
- SELECT UNITS
- ADJUST BACKLIGHT
- ADJUST CONTRAST
- UTILITIES

1-Up Display / 4-Up Display

"GO TO 1-UP DISPLAY" / "GO TO 4-UP DISPLAY" are used to set whether to display parameters individually in a screen or in groups of four per screen.

1. 1-up display
   One parameter is displayed individually in the monitor display.
2. 4-up display
Four parameters are displayed in the
monitor display.
With the 4-up display, a total of 8
parameters are displayed over 2 pages.

Note:
The factory default display is the 4-up display.
"GO TO 1-UP DISPLAY" appears in the main
menu.
When the 1-up display is set, "GO TO 4-UP
DISPLAY" appears in the main menu.
### Parameter Items

</table>

Note:
When display settings are being specified, the parameters appear on "Monitor display L". At all other times, the parameters appear on "Monitor display S".
Language

With "LANGUAGES", the language used in the monitor display can be set to either of the following two.

- ENGLISH
- JAPANESE

An asterisk appears at the right of the currently selected language.

![Language_001](image)

Note:
The factory default language is "ENGLISH".

Fault Code Log

With "STORED CODES", a log of past fault codes can be checked.

When there is a fault code log, each fault is displayed over two pages.

Use the arrow keys to change the page.

![Fault Code Log_001](image)

If there is no fault code log, "NO STORED FAULT CODES" appears.
### List of Fault Codes

When the fault code appears in the monitor display, refer to "Kubota DIAGNOSIS MANUAL COMMON RAIL SYSTEM" or contact your dealer.

The fault codes (DTC) and corresponding information that appear in the monitor display are listed below.

Engine Configuration

This function is not supported.

1-Up Display Setup

With "SETUP 1-UP DISPLAY", the displayed parameters can be reset to the factory defaults, or the necessary parameters to be displayed can be selected. The following 3 items appear when "SETUP 1-UP DISPLAY" is selected.

- USE DEFAULTS
- CUSTOM SETUP
- AUTOMATIC SCAN

■ Use Defaults

With "USE DEFAULTS", the 1-up display parameters return to the factory defaults.

1. Press the menu key. After the main menu appears, use the arrow keys to highlight "SETUP 1-UP DISPLAY", and then press the Enter key.

2. Highlight "USE DEFAULTS", and then press the Enter key.

3. "RESTORED TO DEFAULTS" appears in the monitor display, and the parameters are reset to the factory defaults of the following 8 items.

[1] ENGINE SPEED
[2] ENGINE COOLANT TEMPERATURE
[3] %SOOT
[4] FUEL LEVEL
[5] ENGINE OIL PRESSURE
[6] MACHINE HOURS
[7] BATTERY POTENTIAL
[8] DPF STATUS

4. After the settings have been applied, pressing the menu key once returns to the main menu, and pressing the key again returns to the 1-up/4-up display screen.

■ Custom Setup

With "CUSTOM SETUP", the type and number of parameters as well as their display order can be specified.

1. Press the menu key. After the main menu appears, use the arrow keys to highlight "SETUP 1-UP DISPLAY", and then press the Enter key.

2. Highlight "CUSTOM SETUP", and then press the Enter key.
2. Highlight "CUSTOM SETUP", and then press the Enter key. The list of parameters appears.

3. Change the parameters.
   [1] To add a parameter
   a. Use the arrow keys to highlight the parameter to be added, and then press the Enter key.
   b. A number appears at the right of the selected parameter. This number indicates the display order for the parameter.

4. After the settings have been applied, pressing the menu key once returns to the main menu, and pressing the key again returns to the 1-up/4-up display screen.

[2] To deselect a parameter and remove it from the list of displayed parameters
a. Highlight the parameter, and then press the Enter key.
■ Automatic Scan

With "AUTOMATIC SCAN", the 1-up display can be set to automatically scroll through the selected parameters one by one.

1. Press the menu key.
   After the main menu appears, use the arrow keys to highlight "SETUP 1-UP DISPLAY", and then press the Enter key.

2. When "AUTOMATIC SCAN ON" appears, the parameters are scrolled automatically. For manual scrolling, highlight "AUTOMATIC SCAN ON", and then press the Enter key.
   It turns into "AUTOMATIC SCAN OFF" and the parameters will be scrolled manually.

3. After the settings have been applied, pressing the menu key once returns to the main menu, and pressing the key again returns to the 1-up/4-up display screen.
   Note:
   When the parameters are scrolled automatically, press the Enter key once to pause scrolling.
   When scrolling is paused, press the Enter key once to restart scrolling.

4-Up Display Setup

With "SETUP 4-UP DISPLAY", the displayed parameters can be reset to the factory defaults, or the monitor display of selected, necessary parameters can be set up.

The following 2 items appear when "SETUP 4-UP DISPLAY" is selected.
- USE DEFAULTS
- CUSTOM SETUP

■ Use Defaults

With "USE DEFAULTS", the 4-up display parameters return to the factory defaults.

1. Press the menu key.
   After the main menu appears, use the arrow keys to highlight "SETUP 4-UP DISPLAY", and then press the Enter key.
2. Highlight "USE DEFAULTS", and then press the Enter key.

3. "RESTORED TO DEFAULTS" appears in the monitor display, and the parameters are reset to the factory defaults of the following 8 items.
   - First page
     [1] ENGINE SPEED
     [2] ENGINE COOLANT TEMPERATURE
     [3] %SOOT
     [4] FUEL LEVEL
   - Second page
     [1] ENGINE OIL PRESSURE
     [2] MACHINE HOURS
     [3] BATTERY POTENTIAL
     [4] DPF STATUS

4. After the settings have been applied, pressing the menu key once returns to the main menu, and pressing the key again returns to the 1-up/4-up display screen.

### Custom Setup

With "CUSTOM SETUP", the type and number of parameters as well as their display order can be specified.

1. Press the menu key. After the main menu appears, use the arrow keys to highlight "SETUP 4-UP DISPLAY", and then press the Enter key.

2. Highlight "CUSTOM SETUP", and then press the Enter key.
3. Select the page.
   [1] Check that the values for the four parameters are highlighted.

   ![Diagram showing parameter selection](vjgml4-017)

   Custom Setup_003
   1 Parameter values

   [2] Use the arrow keys to display the page to be changed, and then press the Enter key.

4. Change the parameters.
   [1] Check that the value for one parameter is highlighted.

   ![Diagram showing parameter selection](vjgml4-018)

   Custom Setup_004

   [2] Use the arrow keys to highlight the value of the parameter to be changed, and then press the Enter key.

   [3] The parameters appear. The number at the right of the parameter indicates the location in the 4-up display.
   1=Upper left
   2=Lower left
   3=Upper right
   4=Lower right

   ![Diagram showing parameter selection](vjgml4-019)

   Custom Setup_005

   ![Diagram showing parameter selection](vjgml4-018)

   Custom Setup_006

   [4] To change to a different parameter
   a. Use the arrow keys to highlight the parameter to be selected, and then press the Enter key.

   ![Diagram showing parameter selection](vjgml4-020)

   Custom Setup_007
b. Check that a number appeared to the right of the selected parameter.

Custom Setup_008

[5] To deselect a parameter and remove it from the list of displayed parameters
a. Highlight the parameter to be removed, and then press the Enter key.

Custom Setup_009

b. Check that the number at the right of the parameter disappeared.

Custom Setup_011

c. Press the menu key and check that the parameter has changed.

Custom Setup_012

5. Pressing the menu key once returns to the display for selecting the page.
6. To change other parameters, repeat steps 3 to 5.

Service Reminders

With "SERVICE REMINDERS", the notification of replacement time for the following 5 consumables can be specified.

- Engine oil
- Engine oil filter
- Hydraulic oil
- Hydraulic oil filter
- Air cleaner

The following 2 items appear when "SERVICE REMINDERS" is selected.

- RESET REMINDERS
- MODIFY REMINDERS
■Reset Reminders

With "RESET REMINDER", displayed remaining time can be reset to the time specified with "MODIFY REMINDERS".

1. Press the menu key.

   After the main menu appears, use the arrow keys to highlight "SERVICE REMINDERS", and then press the Enter key.

2. Highlight "RESET REMINDER", and then press the Enter key.

   ![Image of menu with reset reminder highlighted]

   - 1: Menu key
   - 2: Arrow keys
   - 3: Enter key

3. Use the arrow keys to highlight the item to be changed, and then press the Enter key.

   A plus appears at the right of the currently selected items.

4. The remaining time for the selected item appears.

   ![Image of remaining time display]

   - Plus

5. The screen for selecting the item appears.

   ![Image of selection screen]

   - [1] To reset the remaining time to the specified time, press the Enter key.

     To reset, press the Enter key.
     To cancel resetting, press the menu key.

   ![Image of reset confirmation screen]

   - Plus

   ![Image of selection screen]

   - Yes
   - No

   ![Image of reset confirmation screen]
Modify Reminders

With "MODIFY REMINDERS", the replacement time period for consumables can be specified. The factory default replacement time periods are the initial time periods. Change the setting as necessary. The replacement time period should be in accordance with the maintenance schedule.

Initial and regular time periods

<table>
<thead>
<tr>
<th>Item</th>
<th>Initial time period</th>
<th>Regular time period</th>
</tr>
</thead>
<tbody>
<tr>
<td>Engine oil</td>
<td>50 hrs.</td>
<td>400 hrs.</td>
</tr>
<tr>
<td>Engine oil filter</td>
<td>50 hrs.</td>
<td>400 hrs.</td>
</tr>
<tr>
<td>Hydraulic oil</td>
<td>100 hrs.</td>
<td>500 hrs.</td>
</tr>
<tr>
<td>Hydraulic oil filter</td>
<td>100 hrs.</td>
<td>500 hrs.</td>
</tr>
<tr>
<td>Air cleaner</td>
<td>600 hrs.</td>
<td>600 hrs.</td>
</tr>
</tbody>
</table>

1. Press the menu key. After the main menu appears, use the arrow keys to highlight "SERVICE REMINDERS", and then press the Enter key.

2. Highlight "MODIFY REMINDERS", and then press the Enter key.

3. Use the arrow keys to highlight the item to be changed, and then press the Enter key. A plus appears at the right of the currently specified items.

4. The replacement time period for the selected item appears.
5. Highlight the digit to be changed. Press the right arrow key to increase the number. Press the left arrow key to change the digit.

6. To save the specified time period, press the Enter key.

7. "MODIFY SERVICE REMINDER?" appears. To save the changes, press the Enter key. To cancel the changes, press the menu key.

8. The display for selecting the item appears.

### Reminder Display

**Important**

If a warning message appears, immediately stop operation, and then perform the replacement procedure.

1. When the specified replacement time period for a consumable has passed, a warning message appears in the monitor display and the LED (yellow) lights up.

2. Pressing the Enter key changes the screen from the warning message to the parameter display.

3. A warning mark appears in the upper-right corner of the monitor display.

4. Change the replacement time period of consumables with "RESET REMINDERS" or "MODIFY REMINDERS". When the replacement time period is changed, the warning message and mark disappear.
Select Units

With "SELECT UNITS", the units of parameter values can be set to any of the following three formats.

- ENGLISH
- METRIC KPA
- METRIC BAR

An asterisk appears at the right of the currently selected unit.

<table>
<thead>
<tr>

</tbody>
</table>

Note:
The factory default unit is "METRIC KPA".

GM2810A
Handling Instructions
Adjust Backlight

With "ADJUST BACKLIGHT", the brightness of the monitor display can be adjusted. Press the right arrow key to make the display brighter. Press the left arrow key to make the display darker.

Adjust Contrast

With "ADJUST CONTRAST", the contrast of the monitor display can be adjusted. Press the right arrow key to decrease the contrast. Press the left arrow key to increase the contrast.

Utilities

With "UTILITIES", the remaining fuel volume can be specified and the monitor configuration can be displayed. The following 6 items appear when "UTILITIES" is selected.

- SOFTWARE VERSION
- FAULT CONVERSION
- ANALOG INPUT
- OEM

Note:
"GAGE DATA" and "REMOVE ALL GAGES" are not supported on this machine.

Software Version

With "SOFTWARE VERSION", the software version of the monitor can be displayed.

Fault Conversion

With "FAULT CONVERSION", the J1939 fault code conversion method can be specified. The monitor normally detects J1939 version 4. Since the engine ECU of this machine uses J1939 version 4, no adjustments are necessary.

Analog Input

With "ANALOG INPUT", remaining fuel volume information can be specified. The following 2 items appear when "ANALOG INPUT" is selected.

- BACKLIGHT DIMMER
- FUEL LEVEL

Important

"BACKLIGHT DIMMER" is not supported on this machine. Always select "FUEL LEVEL". If "BACKLIGHT DIMMER" is selected, "NO DATA" appears as the value for the fuel level parameter.

Note:
The factory default analog input is "FUEL LEVEL".
1. Fuel Level

With "FUEL LEVEL", the low fuel level can be specified.

1. Press the menu key.
   After the main menu appears, use the arrow keys to highlight "UTILITIES", and then press the Enter key.

2. Highlight "ANALOG INPUT", and then press the Enter key.

3. Highlight "FUEL LEVEL", and then press the Enter key.

4. Highlight "SET LOW FUEL LEVEL", and then press the Enter key.

5. "LOW FUEL" appears.

6. Press the right arrow key to increase the value. Press the left arrow key to decrease the value.
   The value can be set between 10% and 80% in 5% increments.

7. To save the specified value, press the Enter key.
   Note: The factory default low fuel level is 10%.
2. Low Fuel Level Display

**Caution**

If a warning message appears, immediately stop operation, and then supply fuel.

1. When the fuel level falls below the specified low fuel level, a warning message appears in the monitor display and the LED (yellow) lights up. The warning message appears on two pages. Use the arrow keys to change the page.

   - Text 1

   ![Low Fuel Level Display_001](image1.png)

   1. LED (yellow)
   2. Enter key
   3. Arrow keys

   - Text 2

   ![Low Fuel Level Display_002](image2.png)

   2. Pressing the Enter key changes the screen from the warning message to the parameter display.

3. A warning mark appears in the upper-right corner of the monitor display.

4. When fuel is supplied to bring the fuel level above the specified low fuel level, the warning message and mark disappear.

   - **OEM**
     "OEM" is used when the manufacturer specifies factory default settings.

   ![Low Fuel Level Display_003](image3.png)

   **Important**
   No adjustments by the operator are necessary.
Fault Code Displays

**Important**
When the fault code (DTC) appears in the monitor display, contact your dealer.

A fault code (DTC) appears in the monitor display when a failure occurs on the function of engine. Each fault code is displayed over two pages. Use the arrow keys to change the page.

- **Text 1**
  - The fault code name appears.

- **Text 2**
  - The corrective action appears.

Pressing the Enter key changes the screen from the fault code to the parameter display.

**Important**
If the service reminders are configured, the notices of the replacement time period for consumables and the fault code may appear all together.
If the low fuel level is specified, the notices of fuel level low and the fault code may appear all together.
If "ACTIVE FAULTS - ECU" message appears, check both the service reminder warning message and the fault code (DTC).

To check the service reminder warning message:
Highlight the service reminder notice, and then press the Enter key.

- **Text 1**
  - The item of requiring replacement of consumables appears.
To check the fault code (DTC): Highlight the fault code notice, and then press the Enter key.

---

Note:
If the warning message of service reminder ignored and the Enter key pressed to hide the message, the monitor will display "ACTIVE FAULTS - ECU".
If the fault code (DTC) ignored and the Enter key pressed, the monitor will also display "ACTIVE FAULTS - ECU".
If the notice ignored and the menu key pressed when the monitor displays "ACTIVE FAULTS - ECU", the warning mark continues to be displayed in the upper right corner of the monitor display.
To check the warning message and the fault code (DTC) again, press the Enter key to return to the display of "ACTIVE FAULTS - ECU".
Engine Warning Lamp

**Important**

Make repairs immediately if the fault codes of PCD (Particulate Control Diagnostic) and NCD (NOx Control Diagnostic) appear.

Engine warning lamp (LED) lights up or blinks when a failure occurs on the function of engine. Check the fault code (DTC) in the monitor display.

The lighting patterns of engine warning lamp are as follows.

**Note:**
- PCD means fault codes relevant to Particulate Control Diagnostic.
- NCD means fault codes relevant to NOx Control Diagnostic.

1. **Engine warning lamp lights up when only DTC other than PCD/NCD come up.**

2. **Engine warning lamp blinks when only DTC relevant to PCD/NCD come up.**

3. **Engine warning lamp repeats blinking and lighting alternately when DTC relevant to/other than PCD/NCD come up at the same time. (It repeats blinking three times and lighting three seconds.)**
Travel of Machine

Moving The Machine

Caution

Under any circumstances drive the machine at such a speed that you can stop it immediately for emergencies.

Caution

When traveling, be sure to stop the rotary knives and raise the mower decks.

1. Start the engine.
   "Procedure to Start Engine" (Page 4-21)
2. Raise all mower decks, and then engage the mower lock levers (latches) for mower decks #4 and #5.
3. Depress the brake pedal to release the parking brake.
4. Slowly depress the traveling pedal.
5. The machine starts traveling.

Towing The Machine

If the machine does not travel due to engine trouble, etc., you can move it by towing it.

Caution

Before towing, check that the brake is applied effectively.

Caution

Before starting the engine, be sure to close the unload valves.

Important

Do not touch the unload valve except when towing the machine.

Important

When towing the machine, travel at a speed no more than 3.0 km/h. In addition, do not tow the machine for more than 3 minutes. If the towing speed is too fast or there is excessive movement, the pump or motor will be damaged.

1. Stop the engine.
   "Procedure to Stop Engine" (Page 4-22)
2. Apply the parking brake.
3. Chock the wheels.
4. Secure the machine with ropes.
   Front left side

Front right side

Rear side

5. Set the 2WD/4WD selector switch to the "2WD" position.
6. Make sure that the steering wheel is raised completely, and then bring the seat to the backmost position.
7. Pull up the lever behind the seat to unlock it, and then tilt the seat forward to open the cover.

8. Turn the unload valve, located beside the hydraulic pump, 90 degrees (so that it is vertical) to open it.

9. Replace the seat and close the cover.
10. Remove the wheel stopper.
11. Depress the brake pedal to release the parking brake.

**Warning**

While towing, always keep your foot on the brake pedal and depress the brake pedal at any time to stop.

12. Tow the machine slowly.

---

### Cutting Work

#### Cutting Operation

**Warning**

Do NOT start to move or stop the machine abruptly. To do so is very dangerous. In addition, it may damage the hydraulic system or result in oil leakage.

**Caution**

Cutting work must be performed at an appropriate speed for the site and location. When cutting bumpy surfaces, keep the engine rpm steady, and slow down the cutting speed.

**Caution**

Please note that if you stop operating the mower deck up/down lever before the mower decks are raised completely, knife rotation may not stop. Knife rotation will be turned on or off based on the sensor-detected position of the mower decks.

**Caution**

Be sure that people around the machine keep a safe distance away.

1. Start the engine.
   "Procedure to Start Engine" (Page 4-21)
2. Raise all mower decks.
3. Depress the brake pedal to release the parking brake.
4. Shift the throttle lever to the "High speed" position to run the engine at the maximum rpm.
5. Right before starting cutting work, release the mower lock levers for mower decks #4 and #5.
6. Shift the mower deck up/down lever to the "Lower" position to lower the mower decks.
7. Set the knife rotation switch to the "Rotation" position to rotate the rotary knives of all mower decks.
8. Depress the traveling pedal to start cutting work.
Note:
During the work, the rotary knives will rotate or stop in sync with the up and down motion of the mower decks.

Transporting

Transporting Procedure
When loading the machine into a trailer or a truck to transport it, drive the machine forward. When unloading, drive the machine in reverse. If the roof is installed on the machine, remove it. The roof may be damaged by wind pressure.

Storage

Before Long-Term Storage
- Remove dirt, grass clippings, debris, oil stains etc. completely.
- Supply oil and apply grease to appropriate parts.
- Remove the negative terminal of the battery.

### Maintenance Precautions

**Caution**
First, learn well the maintenance operations you plan to perform.

**Important**
Use tools appropriate for each maintenance operation.

**Important**
For the safe and best performance of your machine, use Baroness genuine parts for replacement and accessories. Please note that our product warranty may be void if you use non-genuine parts for replacement or accessories.

### Maintenance Schedule

*1: When biodiesel fuel is used, change the fuel filter cartridge, fuel hose and clamp bands with new ones at intervals half of the usual ones.

*2: Consult your local Baroness Dealer or local KUBOTA Dealer for this service.
The items above (*3 marked) are registered as emission related critical parts by KUBOTA in the U.S. EPA nonroad emission regulation. As the engine owner, you are responsible for the performance of the required maintenance on the engine according to the above instruction. Please see the Engine's Warranty Statement in detail.

- The items listed above other than *3 marked are not necessary to keep the emission-related warranty valid.
- Failure to perform the maintenance will cause problems that will significantly degrade the engine performance.
- *5: Refer to the Battery's Owner's Manual.
- The values for consumables are not guaranteed.
- Replace the steering cylinder hoses every 2 years.

DPF

About DPF

The DPF is a purifying filter that collects PM (soot) from exhaust gas. When a certain amount of PM (soot) has accumulated, DPF regeneration must be performed automatically or manually in order to restore the filtering function.

DPF Regeneration

**Danger**

Since it will become extremely hot around the exhaust outlet during DPF regeneration, do not perform the regeneration in a location where fires may occur.

**Important**

When the system enters the level where DPF regeneration is required, perform the regeneration immediately. Interrupting the regeneration or ignoring the warning and continuing traveling or cutting work may cause the engine and DPF to malfunction.

**Important**

Do not repeat unnecessary regeneration or interrupting regeneration. If repeating them, the measured level of engine oil may increase since the engine oil is mixed with a slight amount of fuel, accompanied by quality degradation.

**Important**

Perform DPF regeneration when the engine sufficiently warmed up.

DPF regeneration is burning PM (soot) collected in DPF with the exhaust temperature heated up to high temperature by the engine ECU control of intake air mass and fuel injection.

**Automatic Regeneration**

**Danger**

Since it will become extremely hot around the exhaust outlet during DPF regeneration, do not perform the regeneration in a location where fires may occur.

**Caution**

Normally, set the DPF auto regeneration inhibit switch to the "Auto regeneration mode". However, when operating in a location where fires may occur, set the DPF auto regeneration inhibit switch to the "Auto regeneration inhibit mode".

**Important**

When the system enters the level where DPF regeneration is required, perform the regeneration immediately. Interrupting the regeneration or ignoring the warning and continuing traveling or cutting work may cause the engine and DPF to malfunction.

Automatic regeneration is the automatic control of increasing the exhaust temperature for DPF regeneration.

- You can continue to use this machine for traveling and cutting work during DPF regeneration.
- You can operate this machine to perform the regeneration. (The fault diagnostic tool is not required.)
- Automatic regeneration is activated only when the auto regeneration inhibit switch set to the "Auto regeneration mode".
- Automatic regeneration is activated when PM accumulation level is "Level 1" or "Level 2". However, it may be activated in "Level 0" depending on the other condition.
If the regeneration remains uncompleted even after 30 minutes have passed since the start of automatic regeneration in PM accumulation "Level 1", PM accumulation level enters "Level 2".

These are the procedures of automatic regeneration.

■ When the DPF auto regeneration inhibit switch set to the "Auto regeneration mode":
1. When the conditions for automatic regeneration are met, the automatic regeneration starts with the regeneration icon lighting.
2. When the regeneration completed, the regeneration icon disappears.

■ When the DPF auto regeneration inhibit switch set to the "Auto regeneration inhibit mode":
1. When PM accumulation level enters "Level 1" or "Level 2", the blinking regeneration icon appears.
2. Set the DPF auto regeneration inhibit switch to the "Auto regeneration mode".
3. When the conditions for automatic regeneration are met, the automatic regeneration starts and the regeneration icon changes from blinking to lighting.
4. When the regeneration completed, the regeneration icon disappears.

Parked Regeneration

⚠️ Danger ⚠️

Since it will become extremely hot around the exhaust outlet during DPF regeneration, do not perform the regeneration in a location where fires may occur.

Important

When the system enters the level where DPF regeneration is required, perform the regeneration immediately. Interrupting the regeneration or ignoring the warning and continuing traveling or cutting work may cause the engine and DPF to malfunction.

Parked regeneration is the DPF regeneration forcibly performed, parking this machine in a safe location, when auto regeneration does not reduce the amount of accumulated PM to the specified value.

- You can not continue to use this machine for traveling and cutting work during DPF regeneration.
- You can operate this machine to perform the regeneration. (The fault diagnostic tool is not required.)
- These are the conditions for activating parked regeneration.
  1. The parking brake is applied.
  2. The traveling pedal is in neutral.
  3. The throttle opening is 0% (idling).
- Parked regeneration is activated when PM accumulation level is "Level 1", "Level 2" or "Level 3".
Important
If the regeneration remains uncompleted in automatic regeneration, parked regeneration is required with the blinking regeneration icon.

■ In PM accumulation "Level 1" or "Level 2":

Important
If ignoring the parked regeneration requirement and continuing traveling or cutting work in PM accumulation "Level 1" or "Level 2", PM accumulation level enters "Level 2" or "Level 3".

Follow the steps below for parked regeneration.

1. When PM accumulation level enters "Level 1" or "Level 2", the blinking regeneration icon appears.
2. When the DPF auto regeneration inhibit switch set to the "Auto regeneration mode":

![Regeneration Icon](image1)

When the DPF auto regeneration inhibit switch set to the "Auto regeneration inhibit mode":

![Regeneration Icon](image2)

3. Park this machine in a safe location.
4. Apply the parking brake.
5. Set the throttle opening to 0% (idling).
6. Press the DPF parked regeneration switch.
7. When the regeneration completed, the regeneration icon disappears.

■ In PM accumulation "Level 3":

Important
If ignoring the parked regeneration requirement and continuing traveling or cutting work in PM accumulation "Level 3", PM accumulation level enters "Level 4".

If still continuing traveling or cutting work, you will not be able to operate this machine for regeneration.

Important
Automatic regeneration can not be activated in PM accumulation "Level 3".
Perform parked regeneration immediately.

1. These are the statuses in PM accumulation "Level 3".
   - "Excessive PM3" appears in the monitor display.
   - Pressing an arrow key changes the display to "CORRECTIVE ACTION: Start DPF Parked Regeneration immediately".
   - The LED (yellow) lights up.
   - The engine output is limited at 50%.

2. Stop traveling and cutting work.
2. Stop traveling and cutting work.
3. Park this machine in a safe location.
4. Apply the parking brake.
5. Set the throttle opening to 0% (idling).
6. Press the DPF parked regeneration switch. Parked regeneration starts and the regeneration icon changes from blinking to lighting.
7. When the regeneration completed, the regeneration icon disappears.

---

### Manual Regeneration

**Danger**

Since it will become extremely hot around the exhaust outlet during DPF regeneration, do not perform the regeneration in a location where fires may occur.

**Important**

When the system enters the level where DPF regeneration is required, perform the regeneration immediately. Interrupting the regeneration or ignoring the warning and continuing traveling or cutting work may cause the engine and DPF to malfunction.

Manual regeneration is the DPF regeneration performed only by the expert with the fault diagnostic tool. Normal automatic regeneration or parked regeneration can not complete regeneration since large amount of PM accumulates. Manual regeneration can be activated in any PM accumulation level.

- You can not continue to use this machine for traveling and cutting work during DPF regeneration.
- You can not perform the regeneration. (The fault diagnostic tool is required.)
- Manual regeneration is activated in PM accumulation "Level 4".
- Manual regeneration is activated in any PM accumulation level when the following condition met.
  1. when replacing DPF
  2. when replacing ECU
In PM accumulation "Level 4":

**Important**

If ignoring the manual regeneration requirement and continuing traveling or cutting work in PM accumulation "Level 4", PM accumulation level enters "Level 5". If still continuing traveling or cutting work, fatal trouble will occur on the engine and DPF.

1. These are the statuses in PM accumulation "Level 4".
   - "Excessive PM4" appears in the monitor display.
     Pressing an arrow key changes the display to "CORRECTIVE ACTION: Stop engine!! Contact dealer immediately".
   - The LED (yellow) lights up.
   - The engine output is limited at 50%.

2. Stop traveling and cutting work.
3. Park this machine in a safe location.
4. Apply the parking brake.
5. Stop the engine.

6. Contact your dealer for manual regeneration.

**Replacement of DPF**

When PM accumulates excessively in the DPF or ash accumulates, replace the DPF since the regeneration in that case is prohibited.

- You can not continue to use this machine for traveling and cutting work.
- The regeneration is impossible.
- Replace every 3,000 hours.
- Replace DPF in PM accumulation "Level 5".

1. These are the statuses in PM accumulation "Level 5".
   - "Excessive PM5" appears in the monitor display.
     Pressing an arrow key changes the display to "CORRECTIVE ACTION: Stop engine!! Contact dealer immediately".
   - The LED (red) lights up.
   - The engine output is limited at 50%.

2. Stop traveling and cutting work.
3. Park this machine in a safe location.
4. Apply the parking brake.
5. Stop the engine.
6. Contact your dealer for DPF replacement.

Conditions for DPF Regeneration

**Danger**
Since it will become extremely hot around the exhaust outlet during DPF regeneration, do not perform the regeneration in a location where fires may occur.

**Important**
If DPF regeneration is interrupted before it is completed, the next regeneration may be requested soon since not all of the PM (soot) was removed.

**Important**
Perform DPF regeneration when the engine sufficiently warmed up.

1. DPF auto regeneration does not begin unless both of the following two conditions are met.
   - The DPF auto regeneration inhibit switch is set to the "Auto regeneration mode". (Auto regeneration inhibit icon is turned off.)
   - The coolant temperature is 50 °C or more.
2. DPF parked regeneration and manual regeneration do not begin unless all of the following four conditions are met.
   - The parking brake is applied.
   - The traveling pedal is in the neutral position.
   - The throttle opening is 0% (idling).
   - The coolant temperature is 50 °C or more.
3. During DPF regeneration, the operation is canceled if any of the following conditions occur.
   - Any condition for starting regeneration is violated.
   - The ignition key is switched to the "OFF" position.

**PM Accumulation Level**

Level 0
DPF regeneration is not necessary.

Level 1

**Danger**
Since it will become extremely hot around the exhaust outlet during DPF regeneration, do not perform the regeneration in a location where fires may occur.

**Caution**
Normally, set the DPF auto regeneration inhibit switch to the "Auto regeneration mode". However, when operating in a location where fires may occur, set the DPF auto regeneration inhibit switch to the "Auto regeneration inhibit mode".

**Important**
When the system enters the level where DPF regeneration is required, perform the regeneration immediately. Interrupting the regeneration or ignoring the warning and continuing traveling or cutting work may cause the engine and DPF to malfunction.

**Important**
If the regeneration remains uncompleted even after 30 minutes have passed since the start of automatic regeneration in PM accumulation "Level 1", PM accumulation level enters "Level 2".

- You can continue to use this machine for traveling and cutting work during DPF regeneration.
- You cannot continue to use this machine for traveling and cutting work during DPF parked regeneration.
- You can operate this machine to perform the regeneration. (The fault diagnostic tool is not required.)
<Automatic regeneration>

- When the DPF auto regeneration inhibit switch set to the "Auto regeneration mode":
  1. When the conditions for automatic regeneration are met, the automatic regeneration starts with the regeneration icon lighting.
  2. When the regeneration completed, the regeneration icon disappears.

<Parked regeneration>

- These are the conditions for activating parked regeneration.
  1. The parking brake is applied.
  2. The traveling pedal is in neutral.
  3. The throttle opening is 0% (idling).

- When the DPF auto regeneration inhibit switch set to the "Auto regeneration inhibit mode":
  1. The blinking regeneration icon appears.
  2. Set the DPF auto regeneration inhibit switch to the "Auto regeneration mode".
  3. When the conditions for automatic regeneration are met, the automatic regeneration starts and the regeneration icon changes from blinking to lighting.
  4. When the regeneration completed, the regeneration icon disappears.

- Stop traveling and cutting work.
  3. Park this machine in a safe location.
  4. Apply the parking brake.
  5. Set the throttle opening to 0% (idling).
  6. Press the DPF parked regeneration switch. Parked regeneration starts and the regeneration icon changes from blinking to lighting.
  7. When the regeneration completed, the regeneration icon disappears.
Level 2

**Danger**

Since it will become extremely hot around the exhaust outlet during DPF regeneration, do not perform the regeneration in a location where fires may occur.

**Caution**

Normally, set the DPF auto regeneration inhibit switch to the "Auto regeneration mode". However, when operating in a location where fires may occur, set the DPF auto regeneration inhibit switch to the "Auto regeneration inhibit mode".

**Important**

When the system enters the level where DPF regeneration is required, perform the regeneration immediately. Interrupting the regeneration or ignoring the warning and continuing traveling or cutting work may cause the engine and DPF to malfunction.

**Important**

If ignored the parked regeneration requirement and continuing traveling or cutting work in PM accumulation "Level 2", PM accumulation level enters "Level 3".

- You can continue to use this machine for traveling and cutting work during DPF auto regeneration.
- You can not continue to use this machine for traveling and cutting work during DPF parked regeneration.
- You can operate this machine to perform the regeneration. (The fault diagnostic tool is not required.)

**Automatic regeneration**

- When the DPF auto regeneration inhibit switch set to the "Auto regeneration inhibit mode":
  1. The blinking regeneration icon appears.
  2. Set the DPF auto regeneration inhibit switch to the "Auto regeneration mode".
  3. When the conditions for automatic regeneration are met, the automatic regeneration starts and the regeneration icon changes from blinking to lighting.
  4. When the regeneration completed, the regeneration icon disappears.

- When the regeneration completed, the regeneration icon disappears.

3. Park this machine in a safe location.
4. Apply the parking brake.
5. Set the throttle opening to 0% (idling).
6. Press the DPF parked regeneration switch.
   Parked regeneration starts and the regeneration icon changes from blinking to lighting.
7. When the regeneration completed, the regeneration icon disappears.

#### Level 3

**Danger**

- Since it will become extremely hot around the exhaust outlet during DPF regeneration, do not perform the regeneration in a location where fires may occur.

**Important**

- When the system enters the level where DPF regeneration is required, perform the regeneration immediately.
  - Interrupting the regeneration or ignoring the warning and continuing traveling or cutting work may cause the engine and DPF to malfunction.

**Important**

- If ignoring the parked regeneration requirement and continuing traveling or cutting work in PM accumulation "Level 3", PM accumulation level enters "Level 4".
  - If still continuing traveling or cutting work, you will not be able to operate this machine for regeneration.

**Important**

- Automatic regeneration can not be activated in PM accumulation "Level 3".
  - Perform parked regeneration immediately.

- You can not continue to use this machine for traveling and cutting work during DPF regeneration.
- You can operate this machine to perform the regeneration. (The fault diagnostic tool is not required.)
1. These are the statuses in PM accumulation "Level 3".

- "Excessive PM3" appears in the monitor display.
  Pressing an arrow key changes the display to "CORRECTIVE ACTION: Start DPF Parked Regeneration immediately".
- The LED (yellow) lights up.
- The engine output is limited at 50%.

2. Stop traveling and cutting work.
3. Park this machine in a safe location.
4. Apply the parking brake.
5. Set the throttle opening to 0% (idling).
6. Press the DPF parked regeneration switch.
   Parked regeneration starts and the regeneration icon changes from blinking to lighting.
7. When the regeneration completed, the regeneration icon disappears.

---

**Level 4**

**Danger**

Since it will become extremely hot around the exhaust outlet during DPF regeneration, do not perform the regeneration in a location where fires may occur.

**Important**

When the system enters the level where DPF regeneration is required, perform the regeneration immediately.
Interrupting the regeneration or ignoring the warning and continuing traveling or cutting work may cause the engine and DPF to malfunction.

**Important**

If ignoring the manual regeneration requirement and continuing traveling or cutting work in PM accumulation "Level 4", PM accumulation level enters "Level 5".
If still continuing traveling or cutting work, fatal trouble will occur on the engine and DPF.

- You can not continue to use this machine for traveling and cutting work during DPF regeneration.
- You can not perform the regeneration. (The fault diagnostic tool is required.)
1. These are the statuses in PM accumulation "Level 4".

   Level 4

   1. LED (yellow)
   2. Arrow key

   - "Excessive PM4" appears in the monitor display.
     Pressing an arrow key changes the display to "CORRECTIVE ACTION: Stop engine!! Contact dealer immediately".
   - The LED (yellow) lights up.
   - The engine output is limited at 50%.

2. Stop traveling and cutting work.
3. Park this machine in a safe location.
4. Apply the parking brake.
5. Stop the engine.
6. Contact your dealer for manual regeneration.

Level 5

When PM accumulates excessively in the DPF or ash accumulates, replace the DPF since the regeneration in that case is prohibited.

- You can not continue to use this machine for traveling and cutting work.
- The regeneration is impossible.

1. These are the statuses in PM accumulation "Level 5".

   Level 5

   1. LED (red)
   2. Arrow key

   - "Excessive PM5" appears in the monitor display.
     Pressing an arrow key changes the display to "CORRECTIVE ACTION: Stop engine!! Contact dealer immediately".
   - The LED (red) lights up.
   - The engine output is limited at 50%.

2. Stop traveling and cutting work.
3. Park this machine in a safe location.
4. Apply the parking brake.
5. Stop the engine.
6. Contact your dealer for DPF replacement.
Warning

When replacing a tire or beginning any other maintenance or repairs, be sure to chock the wheels to prevent the machine from moving. Before jacking up the machine, park it on a hard, flat surface such as a concrete floor and remove any obstacles that could prevent you from performing the work safely. When necessary, use an appropriate chain block, hoist, or jack. Support the machine securely with jack stands or appropriate blocks. Failure to do so may cause the machine to move or fall, resulting in injury or death.

Use the jack-up points identified in this manual when jacking up the machine. Only place a jack under the jack-up points specified. Placing a jack at any other point could result in damage to the frame or other parts.

Jack-Up Points

1. Front right frame
2. Front left frame
3. Center of pivot
4. Below rear wheel motors

Greasing

About Greasing

Since there may be adhesion or damage due to lack of grease on moving parts, they must be greased. Add urea-based No. 2 grease in accordance with the Maintenance Schedule. Other locations where the specified grease or lubricant is used are indicated in "Greasing Points". Add grease using the specified grease or lubricant.

### Greasing Points

Grease nipples are installed in the following locations. Add grease every 50 hours of operation.

<table>
<thead>
<tr>
<th>Portion</th>
<th>No. of Greasing Points</th>
</tr>
</thead>
<tbody>
<tr>
<td>Rear roller</td>
<td>10</td>
</tr>
<tr>
<td>Mower arm fulcrum</td>

</tr>
</tbody>
</table>

4. Below rear wheel motors

Two locations

Jack-Up Points_005

Greasing Points_001
1. Rear roller
   There is one greasing point each on the left and right of each mower deck.

2. Mower arm fulcrum
   There is one greasing point on the arm connected to each mower deck.
   Grease mower decks #2 and #3 in the swiveled position.
   Mower decks #1, #4 and #5

3. Lift arm fulcrum
   There is one greasing point on the arm connected to each mower deck.
   Lower the mower decks before greasing the lift arm fulcrums.
   Mower decks #1 and #4

Mower decks #2 and #3

Mower deck #5
4. Lift arm cylinder fulcrum
This is on each cylinder of the arms connected to each mower deck.
Mower decks #1, #4 and #5
There are two greasing points on each cylinder.

Mower decks #2 and #3
There are three greasing points on each cylinder.

5. Pivot
Middle between the rear wheels

6. Neutral position area
There are two locations.
7. Traveling pedal shaft fulcrum
   There are two locations.

8. Foot brake
   There are three locations.

---

**Maintenance Work**

**Cleaning of Mower Deck**

Be sure to clean the mower deck after use.
1. Stop the engine, and then remove the key.
2. Carefully clean the front and back of the mower deck with water or compressed air.
3. Remove any grass wrapped around the rotary knife.

**Change of Rotary Knife**

**Caution**

The rotary knife is an edged tool. Take extra care in handling since they could cut your hands or legs.

**Caution**

If the rotary knife becomes worn or damaged, a crack or tear between the sail and flat part will result. Take extra care since a broken piece of the rotary knife may fly off while it is rotating.

**Caution**

When touching edged tools, wear gloves, since they could cut your hands.

**Important**

The rotary knife has a specific installation direction. Do not install it facing the wrong direction.

---

1. Rotary knife top side
2. Rotary knife bottom side
Before installing the rotary knife, make sure that it is balanced.

If the edge of the rotary knife becomes chipped or thin, replace it with a new one.

The criteria for replacing the rotary knife are described below.

1. When the narrowest part of the rotary knife has a width of less than 2/3 of the width of a new knife

<table>
<thead>
<tr>
<th>Change of Rotary Knife_002</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 Total width</td>
</tr>
<tr>
<td>2 Blade edge</td>
</tr>
<tr>
<td>3 Blade base</td>
</tr>
<tr>
<td>4 Sail</td>
</tr>
<tr>
<td>A less than 2/3</td>
</tr>
<tr>
<td>B 30 - 40°</td>
</tr>
<tr>
<td>C 0.5 - 1.0 mm (0.02 - 0.04 in)</td>
</tr>
</tbody>
</table>

2. When the thinnest part of the rotary knife has a thickness of less than 1/3 of the thickness of a new knife

<table>
<thead>
<tr>
<th>Change of Rotary Knife_003</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 Thickness</td>
</tr>
<tr>
<td>A less than 1/3</td>
</tr>
</tbody>
</table>

Mower Deck #1

1. Start the engine, and then raise the mower decks.
2. Stop the engine, and then remove the key.
3. Lift the mower deck at the front.

4. Remove the cotter pin and hardened roundhead pin inserted at a, and then insert them at b.

<table>
<thead>
<tr>
<th>Mower Deck #1_002</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 Mower deck</td>
</tr>
<tr>
<td>2 Cotter pin</td>
</tr>
<tr>
<td>3 Hardened roundhead pin</td>
</tr>
</tbody>
</table>
5. Follow the steps below to remove the rotary knife.

   [1] Use the square pipe from the included tools to secure the rotary knife so that it does not turn.
   [2] Remove the two bolts, spring washers and washers used to install the rotary knife.

![Diagram](image1)

**Important**

The tightening torque for the knife mounting bolt is 67 - 85 N-m (683.20 - 866.75 kgf-cm).

6. Install the rotary knife.
   For installing the rotary knife, reverse the removing procedure.

![Diagram](image2)

**Mower Decks #2/#3**

1. Remove the clip pin installed on the mower arm, and then pull out the grip pin.

![Diagram](image3)

2. Pull out the mower deck.

![Diagram](image4)

3. Install the grip pin and clip pin in the mounting hole for maintenance.

![Diagram](image5)
4. Start the engine, and then raise the mower decks.
5. Stop the engine, and then remove the key.
6. Lift the mower deck at the front.

7. Remove the cotter pin and hardened roundhead pin inserted at a, and then insert them at b.

8. Follow the steps below to remove the rotary knife.
   [1] Use the square pipe from the included tools to secure the rotary knife so that it does not turn.
   [2] Remove the two bolts, spring washers and washers used to install the rotary knife.

9. Install the rotary knife.
   For installing the rotary knife, reverse the removing procedure.

Important
The tightening torque for the knife mounting bolt is 67 - 85 N-m (683.20 - 866.75 kgf-cm).

1. Start the engine, and then raise the mower decks.
2. Stop the engine, and then remove the key.
3. Remove the cotter pin and hardened roundhead pin inserted at a, and then insert them at c.

4. Follow the steps below to remove the rotary knife.
   [1] Use the square pipe from the included tools to secure the rotary knife so that it does not turn.
   [2] Remove the two bolts, spring washers and washers used to install the rotary knife.

5. Install the rotary knife.
   For installing the rotary knife, reverse the removing procedure.

### Grinding of Rotary Knife

**Caution**

The rotary knife is an edged tool. Take extra care in handling since they could cut your hands or legs.

**Caution**

Wear gloves when touching edged tools to avoid cutting your hands.

**Caution**

If the rotary knife becomes worn or damaged, a crack or tear between the sail and flat part will result. Take extra care since a broken piece of the rotary knife may fly off while it is rotating.

**Caution**

When grinding the rotary knife, be sure to wear safety glasses and gloves.

**Important**

Using an imbalanced rotary knife may cause vibrations, resulting in damage to the machine.

When the edge of the rotary knife becomes rounded and no longer cuts well, sharpen the worn cutting edge with a grinder or sander. If the edge of the rotary knife becomes chipped or thin, replace it with a new one. The criteria for grinding the rotary knife is described below.

1. When, after grinding, the width of the rotary knife to the blade edge is 2/3 or more of the total width of a new knife.
2. When, after grinding, the blade base of the rotary knife does not reach the sail

3. When the thinnest part of the rotary knife has a thickness of 1/3 or more of the thickness of a new knife

4. If it is not balanced, repeat steps 2. - 3.

Follow the steps below to grind the rotary knife.
1. Remove the rotary knife from the mower deck.
"Change of Rotary Knife" (Page 5-23)

Grind only the top surface of the edge, and be sure to maintain the original angle. By equally grinding the left and right ends of the rotary knife, it can be sharpened without becoming imbalanced.
Balancing of Rotary Knife

**Caution**
The rotary knife is an edged tool. Take extra care in handling since they could cut your hands or legs.

**Caution**
When touching edged tools, wear gloves, since they could cut your hands.

**Important**
Using an imbalanced rotary knife may cause vibrations, resulting in damage to the machine.

When the rotary knife is worn asymmetrically, causing vibrations, or when it becomes dull or worn, remove the rotary knife from the mower deck and balance it. Follow the steps below to balance the rotary knife.

1. Remove the rotary knife from the mower deck.
   "Change of Rotary Knife" (Page 5-23)
2. Install the balancer equipment in an appropriate location.
3. Fit the hole at the center of the rotary knife onto the balancer equipment, and then balance the left and right ends so that the rotary knife is level.

Removing/Installing Tires

**Front Tires**

Follow the steps below to remove the front tires:

1. Loosen the bolts.

2. Securely place the jack beneath the jack-up point of the front left/right frame area, and then raise it until the tire lifts off the ground. "Jack-Up Points" (Page 5-19)
3. Remove the bolts.
4. Remove the tire from the wheel mounting seat.

**Important**
Tighten the bolts in the tightening order (crosswise).

For installing the front tires, reverse the removing procedure.
Rear Tire

Follow the steps below to remove the rear tire.
1. Loosen the bolts.
2. Securely place the jack beneath the jack-up point below the rear wheel motor, and then raise it until the tire lifts off the ground. "Jack-Up Points" (Page 5-19)
3. Remove the bolts.
4. Remove the tire from the wheel mounting base.

Important

Tighten the bolts in the tightening order (diagonally).

For installing the rear tire, reverse the removing procedure.

Adjustment of Belt Tension

**Warning**

Be sure to stop the engine before adjusting the belts.

**Important**

Before making sure of belt tension, rotate the belt several times.

If the belt becomes slack due to frequent use, it may jump or slip. In addition, if it is overtightened, it may wear prematurely. If necessary, adjust it, and always check the belt for appropriate tension.

Fan Belt

1. Press the middle of the belt with your finger to check the belt tension.
2. If the belt tension is inappropriate, loosen bolts A and B (that affix the alternator), and then move the alternator to adjust the tension.

- Fan belt
- Blade
- Alternator
- Bolt A
- Bolt B
- A 7.0 - 9.0 mm (0.28 - 0.35 in)
Adjustment of Brake

Caution
Make sure that the brake wire is not cracked or damaged.

Important
If the brake is not sufficiently effective due to a larger clearance between the brake disc and the pad, adjust the clearance. The wire is used for fine adjustments.

Important
Adjust the brake with the brake pads.

The brake pad wear limit is 3.0 mm (0.12 in).

Important
Make sure that the lever is maintained in the open position (neutral).

1. For each wheel, fully tighten the adjustment bolt on the brake disc side.

| 1 | Adjustment bolt (on brake disc side) |
| 2 | Lever |
| A | Open (neutral) |

2. Reduce the clearance by loosening the lock nut, then tightening the adjustment nut. Tighten the adjustment nut until the friction material contacts the friction surface of the disc.

3. Loosen the adjustment nut to adjust the clearance between the brake disc and the pad to about 0.2 mm (0.0079 in).
4. Securely place the jack beneath the jack-up point of the front left/right frame area, and then raise it until both tires lift off the ground.
5. Check that the disc rotates freely.
6. Tighten the lock nut, and then fully tighten it while holding the adjustment nut in place.

Warning
A clearance between the brake disc and the pad that is too small may result in heat generation or fire.

| 1 | Brake disc |
| 2 | Wire |
| 3 | Adjustment nut |
| 4 | Lock nut |
7. With the brake pedal released, obtain a play of 1.0 mm (0.039 in) at the connection of the inner wire.

- [Diagram of brake system]

8. Use a wrench to loosen the lock nut and tighten it after making the adjustment with the adjustment bolt.

9. Drive, and then check the following.
   - Make sure that heat is not generated in the brake area.
   - Make sure that the left and right brakes are equally effective.

- [Caution]
  It may result in an unexpected accident if the left and right brakes are not equally effective.

10. If the left and right brakes are not equally effective, make fine adjustments with the adjustment bolt on the brake wire.

- [Diagram of seat adjustment]

Break-In of Brakes

If the brake shoes or brake pads are worn, replace them with new ones. Immediately after replacement, drive to break in the brakes if the effectiveness of the brakes is low. While driving, lightly operate the brakes to break in the contact areas.

Adjusting the Neutral Position of the Piston Pump

- [Caution]
  Make sure not to touch rotating tires.

- [Caution]
  When adjusting the neutral position, pay close attention to abrupt start of the machine. Place the jacks beneath the jack-up points, and then lift the machine until all the tires get off the ground.

  If the machine moves forward or backward while the traveling pedals are released, they are not set to the neutral position. Follow the steps below to make adjustments.
  1. Stop the engine.
  2. Place the jacks beneath the jack-up points, and then lift the machine off the ground.
  3. Make sure that no tires come into contact with the jack stand.
  4. Make sure that the steering wheel is raised completely.
  5. Pull up the forward/backward adjustment lever, and then slide the seat backward completely.
6. While pulling up the lever, tilt the seat upward.

7. Start the engine, and rev it up to the maximum rpm.

8. Set the 2WD/4WD selector switch to the "2WD" position.

9. Adjust the neutral position.
   [1] If the front tires rotate forward, loosen the lock nuts, and then turn the neutral adjustment rod to shorten it.
   [2] If the front tires rotate in reverse, loosen the lock nuts, and then turn the neutral adjustment rod to extend it.

10. Find the position where the front wheels stop, and then tighten the lock nuts.

---

**Change of Coolant**

**Caution**

Do not touch the radiator or coolant during engine operation or immediately after the engine has been turned off. Otherwise, you may get burned.

**Caution**

Change coolant after the engine has well cooled down.

**Caution**

The radiator cap is pressurized. If you remove the radiator cap while the engine is overheated, hot steam will burst out, possibly resulting in burns. Make sure that the water temperature and pressure are reduced, and then grab the cap with a thick cloth and gradually open the cap.

**Important**

When changing the coolant, be sure to drain it into a container and discard it in accordance with local laws and regulations.

**Important**

When changing the coolant, be sure to mix clean water and antifreeze (long-life coolant), and then pour it into the radiator and reserve tank.

**Important**

Tightly close the radiator cap. If the cap is loose or incorrectly installed, water may leak and the engine may overheat.

When mixing antifreeze and clean water, refer to "Relationship between concentration of long-life coolant (LLC) and freezing temperature" below for the mixing ratio.

Relationship between concentration of long-life coolant (LLC) and freezing temperature
### Freezing temperature and LLC concentration

<table>
<thead>
<tr>
<th>Freezing temperature</th>
<th>LLC concentration (volume %)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Down to -10 °C (14 °F)</td>
<td>20 %</td>
</tr>
<tr>
<td>Down to -15 °C (5 °F)</td>
<td>30 %</td>
</tr>
<tr>
<td>Down to -20 °C (-4 °F)</td>
<td>35 %</td>
</tr>
<tr>
<td>Down to -25 °C (-13 °F)</td>
<td>40 %</td>
</tr>
</tbody>
</table>

1. Stop the engine, and then allow the radiator to cool.
2. Open the hood.
3. Follow the steps below to drain the coolant.
   [1] Position a container to drain the coolant into.
   [2] Remove the drain plug from the radiator.
   [5] Open the reserve tank cap, and then drain the coolant.
4. Install the reserve tank.
5. Clean the radiator with clean water to remove any debris or rust.
6. Drain all water from the radiator.
7. Follow the steps below to fill with coolant.
   The coolant quantity, including the reserve tank, is 12.0 dm$^3$ (12.0 L).
   [1] Install the drain plug.
   [2] Supply clean water and antifreeze into the radiator up to the radiator cap opening.
   [4] Supply clean water and antifreeze into the reserve tank up to the "FULL" mark.
8. Start the engine, and then idle for several minutes to bleed air from the system.
9. Stop the engine, and then allow the radiator to cool.
10. Check if the coolant level in the reserve tank is between "FULL" and "LOW", and then supply coolant if necessary.
11. Close the hood.
Change of Hydraulic Oil

**Caution**
Be careful with hot oil, which could cause burns if it contacts your skin.

**Important**
When you change the hydraulic oil, be sure to drain it into a bowl and discard it in accordance with local laws and regulations.

**Important**
If the oil emulsifies or if it becomes even slightly less transparent, change the oil immediately.

**Important**
Use Shell Tellus S2M46 (or equivalent) as hydraulic oil.

1. Follow the steps below to remove the old oil.
   1. Start and run the engine to warm up the oil.
   2. On a level surface, lower the mower decks, and then stop the engine.
   3. Remove the drain plug of the hydraulic tank, and then drain the old oil into a container.
   4. Wind new sealing tape on the drain plug, and then attach it to the hydraulic tank.

2. Remove the left tank cover.

3. Open the tank cap, and then pour new oil from the fill port until the oil level reaches the middle of the oil gauge on the hydraulic tank. The hydraulic tank capacity is approximately 44.0 dm$^3$ (44.0 L).

4. Tighten the tank cap securely.
5. Start the engine, raise and lower the mower decks, and turn the steering wheel left and right. Move forward and reverse repeatedly several times.
6. Raise the mower decks and maintain that position on a level surface, and then check to see if the oil level is at the middle of the oil gauge. If necessary, supply oil.
7. Check underneath the machine for oil leakage.
8. Attach the left tank cover.
Change of Hydraulic Oil Filter

Change of Hydraulic Oil Line Filter

**Caution**
Be careful with hot oil, which could cause burns if it contacts your skin.

**Important**
When replacing the hydraulic oil filter, be sure to drain the oil into a container and discard it in accordance with local laws and regulations.

**Important**
If the hydraulic oil emulsifies or if it becomes even slightly less transparent, change the oil immediately.

**Important**
Use Shell Tellus S2M46 (or equivalent) as hydraulic oil.

1. On a level surface, lower the mower decks, and then stop the engine.
2. Remove the filter protection plate. (#11021-)
3. Loosen the old filter cartridge by hand and remove it.
4. Lightly coat the packing of the new filter cartridge with hydraulic oil, and then install the cartridge.
5. Firmly tighten the filter cartridge by hand until the packing contacts the mounting surface. And then tighten it with a half more turn.

6. Supply hydraulic oil until it reaches the specified level. "Hydraulic Oil Supply" (Page 4-5)
7. Start the engine and stop it after hydraulic oil warmed.
8. Check underneath the machine for hydraulic oil leakage.
9. Install the filter protection plate. (#11021-)
Change of Hydraulic Oil Suction Filter

**Caution**
When replacing the hydraulic oil filter, be sure to drain the oil into a container and discard it in accordance with local laws and regulations.

**Caution**
If the hydraulic oil emulsifies or if it becomes even slightly less transparent, change the oil immediately.

**Caution**
Be careful with hot oil, which could cause burns if it contacts your skin.

**Important**
Use Shell Tellus S2M46 (or equivalent) as hydraulic oil.

**Important**
Replace the intake port packing with a new one.

1. On a level surface, lower the mower decks, and then stop the engine.
2. Remove the left tank cover.
3. Remove bolts, spring washers and washers, and then remove the intake hose joint fitting.
4. Remove the old suction filter and intake port packing.
5. Remove all of the old liquid gasket from the hydraulic tank.
6. Remove all of the old liquid gasket and the intake port packing from the intake hose joint fitting.
7. Wash and clean the intake hose joint fitting.
8. Apply liquid gasket to the new intake port packing and then install it to the intake hose joint fitting.
9. Install the new suction filter to the intake hose joint fitting.
10. Install the intake hose joint fitting to the hydraulic tank.
11. Install the left tank cover.
12. Supply hydraulic oil until it reaches the specified level.
   "Hydraulic Oil Supply" (Page 4-5)
13. Start the engine and stop it after hydraulic oil warmed.
14. Check underneath the machine for hydraulic oil leakage.

**Change of Air Cleaner**

A contaminated air cleaner element may cause malfunction of the engine. To maximize the life of the engine, replace the air cleaner element at the appropriate times.

1. The timing for replacing the air cleaner element is described below.

   [1] Replace the air cleaner element in accordance with the Maintenance Schedule.

   [2] If it is significantly contaminated, replace it, even if the hours of operation do not exceed the specified time.

2. Replace the air cleaner element by following the same steps as for cleaning the air cleaner.
   "Cleaning of Air Cleaner" (Page 4-6)
**Change of Engine Oil**

**Caution**
Be careful with hot oil, which could cause burns if it contacts your skin.

**Important**
When you change the engine oil, be sure to drain it into a bowl and discard it in accordance with local laws and regulations.

**Important**
Be sure to use engine oil that is classified as JASO DH-2 or API Service Grade CJ-4, with SAE viscosity that is appropriate for the operating environment (ambient temperature).

**Important**
Securely screw in the oil level gauge and oil filler cap.

Change the engine oil more frequently if the engine oil is contaminated, or if you use the machine in dusty areas or operate the engine at high loads or in high temperatures.

1. Move the machine onto a level surface, stop the engine, remove the drain plug while the engine oil is warm, and then drain the oil into a bowl.

2. Replace the drain plug in the engine.

3. Through the oil filling port, supply new engine oil until the oil reaches a level in between the upper and lower limit lines on the oil level gauge. Engine oil quantity is approximately 9.7 dm$^3$ (9.7 L).

4. Replace the oil filler cap.

5. It will take a while for the supplied engine oil to descend into the oil pan. Check the oil level again 10 to 20 minutes after supplying the oil.

6. Check underneath the machine for oil leakage.
Replacement of Engine Oil Filter

**Caution**
Be careful with hot oil, which could cause burns if it contacts your skin.

**Important**
When replacing the engine oil filter, be sure to drain the engine oil into a container and discard it in accordance with local laws and regulations.

**Important**
Be sure to use engine oil that is classified as JASO DH-2 or API Service Grade CJ-4, with SAE Viscosity that is appropriate for the operating environment (ambient temperature).

**Important**
Securely tighten the oil level gauge and oil filler cap.

1. With the filter wrench, remove the old filter cartridge.

2. Lightly coat the packing of the new filter cartridge with engine oil.

3. Hand-tighten the filter cartridge until the packing contacts the sealing surface, and then firmly hand-tighten (without using a filter wrench).

4. Supply engine oil until it reaches the specified level.
   "Supply of Engine Oil" (Page 4-9)

5. Start the engine, and then stop it after 10 to 20 minutes.

6. Make sure that there is no oil leakage at the sealing surface of the filter cartridge.

7. Check the engine oil level.
   If it is low, supply engine oil until it reaches the specified level.

Replacement of Fuel Filter

**Important**
During installation, prevent contamination with dirt or dust.
If the fuel is contaminated with dirt, dust, etc., the fuel injection pump and injection nozzle will become worn.

Since the fuel filter is a cartridge, it cannot be disassembled or cleaned.
If dust or dirt accumulates in the fuel filter, the fuel flow will become insufficient.
Replace the fuel filter at the appropriate times.

1. Follow the steps below to replace the fuel filter.

   [1] Using a filter wrench, remove the fuel filter cartridge.

   [2] Lightly coat the packing of the new cartridge with fuel, and then firmly hand-tighten the cartridge, without using the filter wrench.
2. Remove air after replacement.

**Change of Fuse**

**Fuse Box**

**Important**
Before performing maintenance on the electrical system, be sure to disconnect the negative terminal of the battery.

**Important**
If a fuse blows, a short may have occurred within the electrical circuit. Check for the cause, such as faulty terminal connections, damaged wiring or terminals, or incorrect wiring.

The fuse box includes spare fuses and tools.

The machine uses a mini fuse for automobiles. Replace an old fuse with a new fuse of the specified capacity.

**Fuse Box_001**

EU Declaration of Conformity

Product Identification

Product: Lawnmower
Make: BARONESS
Type: 0M2810
Version(s): A
Serial No.: 11006

Measured Sound Power Level:
LWA 104.30 dB
LWA 105 dB

Manufacturer Name: Kyeoisha Co., Ltd.
Address: 1-26 Miyuki-cho, Toyokawa, Aichi-pref, Japan

Conforms to the following Directives

- 2000/14/EC Machinery (MC)
- 2014/30/EU Electromagnetic compatibility (EMC)

We have designed and manufactured using the following specifications

- ISO 5395-1 : 2013 (2006/42/EC)

Technical Documentation

Keeper's Name: Kyeoisha Co., Ltd.
Address: 1-26 Miyuki-cho, Toyokawa, Aichi-pref, Japan

Compiler of the technical file Name: Kyeoisha U.K. Ltd.
Address: Unit 5 Hatch Industrial Park Grenewell Road, Basingstoke Hampshire RG24 7NG, the United Kingdom

Conformity assessment procedures

Internal production control: Module A (2006/42/EC)
EC-type examination: Module B (2014/30/EU)
Internal control of production with assessment of technical documentation and periodical checking (2000/14/EC)

Involved Notified Body (2000/14/EC)
Name: SNCH
Address: 11, Route de Sandweiler 5230 Sandweiler Luxembourg
Certificate / Technical Documentation No.: SNCH+2000/14*2005/88*2910*02/TCGM/2810-02

Place: Japan
Date: 13 May 2019 (13 / 05 / 2019)

Signature: Kimita Kaneko
Name: Quality Dept. Manager

Déclaration de conformité UE

Identification du produit

Produit: Tondeuse à gazon
Fabriquant: BARONESS
Type: 0M2810
Version(s): A
Numéro de série de début: 11006

Niveau de puissance acoustique mesuré:
LWA 104.30 dB
LWA 105 dB

Fabricant: Kyeoisha Co., Ltd.
Adresse: 1-26, Miyuki-cho, Toyokawa, préfecture d'Aichi, Japon

Conforme aux directives suivantes:

- 2006/42/CE Machine (MC)
- 2014/30/UE Compatibilité électromagnétique (CEM)
- 2000/14/CE Émissions sonores de l'équipement de plein air

Conception et fabrication en respect des spécifications suivantes:

Fiche technique

Marque: Kyeoisha Co., Ltd.
Adresse de la marque: 1-26, Miyuki-cho, Toyokawa, préfecture d'Aichi, Japon

Compilateur de la fiche technique (2006/42/CE)
Nom: Kyeoisha U.K. Ltd.
Adresse: Unit 5 Hatch Industrial Park Grenewell Road, Basingstoke Hampshire RG24 7NG, Royaume-Uni

Procédures d'évaluation de la conformité

- Contrôle de production interne: module A (2006/42/CE)
- Examen de type CE: module B (2014/30/UE)

Contrôle interne de la production avec évaluation de la fiche technique et vérification périodique (2000/14/CE)

Organisme notifié impliqué (2000/14/CE)
Nom: SNCH
Adresse: 11, Route de Sandweiler 5230 Sandweiler, Luxembourg
N° de certificat/Document technique: SNCH+2000/14*2005/88*2910*02/TCGM/2810-02

EU02 – 1
Declaración de conformidad de la UE

Identificación del producto

Producto: Cortacésped
Marca: BARONESS
Tipo: GM2810
Versión: A
N.º de serie inicial: 11006
Nivel de potencia sonora medido: LWA 104.30 dB
Nivel de potencia sonora garantizado: LWA 105 dB
Fabricante: Kyoeisha Co., Ltd.
Dirección: 1-26 Miyuki-cho, Toyokawa, Aichi-pref., Japón

Cumple las siguientes Directivas

- 2006/42/CE Maquinaria (MQ)
- 2014/30/UE Compatibilidad electromagnética (EMC)
- 2000/14/CE Emisiones sonoras de máquinas de uso al aire libre

Se ha diseñado y fabricado utilizando las siguientes especificaciones

ISO 5395-1 : 2013 (2006/42/CE)

Documentación técnica

Nombre del responsable: Kyoeisha Co., Ltd.
Dirección del responsable: 1-26 Miyuki-cho, Toyokawa, Aichi-pref., Japón

Compilador del archivo técnico (2006/42/CE)

Nombre: Kyoeisha U.K. Ltd.
Dirección: Unit 5 Hatch Industrial Park Greywell Road, Basingtoke Hampshire RG24 7NG, Reino Unido

Procedimientos de evaluación de conformidad

Control de fabricación interno: Módulo A (2006/42/CE)
Examen de tipo CE: Módulo B (2014/30/UE)
Control interno de fabricación con evaluación de documentación técnica y comprobaciones periódicas (2000/14/CE)

Organismo notificado implicado (2000/14/CE)

Nombre: SNCH
Dirección: 11, Route de Sandweiler 5230 Sandweiler Luxemburgo
Certificado/Documentación técnica n.º: SNCH*2000/14*2005/88*2910*02/TCGM2810-02

EU-Konformitätserklärung

Produktbeschreibung

Produkt: Rasenmäher
Marke: BARONESS
Modell: GM2810
Version(en): A
Startseriennummer: 11006
Gesamter Schallschutzpegel: LWA 104.30 dB
Garantieter Schallschutzpegel: LWA 105 dB

Hersteller

Name: Kyoeisha Co., Ltd.
Adresse: 1-26 Miyuki-cho, Toyokawa, Aichi-pref., Japan

Entspricht den folgenden Richtlinien

- 2006/42/EG Maschinenrichtlinie
- 2014/30/EU Elektromagnetische Verträglichkeit (EMV)
- 2000/14/EG Geräuschemission von im Freien betriebenen Geräten

Unter Anwendung der folgenden Bestimmungen entwickelt und hergestellt

ISO 12100 : 2010 (2006/42/EG)
ISO 5395-1 : 2013 (2006/42/EG)
ISO 5395-3 : 2013 (2006/42/EG)

Technische Dokumentation

Name des Hal ters: Kyoeisha Co., Ltd.
Adresse des Hal ters: 1-26 Miyuki-cho, Toyokawa, Aichi-pref., Japan

Technische Unterlagen erstellt von (2006/42/EG)

Name: Kyoeisha U.K. Ltd.
Adresse: Unit 5 Hatch Industrial Park Greywell Road, Basingtoke Hampshire RG24 7NG, Großbritannien

Konformitätsbewertungsverfahren

- Intere Produktionenkontrolle: Modul A (2006/42/EG)
- EG-Baumusterprüfung: Modul B (2014/30/UE)
- Intere Produktionenkontrolle mit Bewertung der technischen Unterlagen und regelmäßiger Überprüfung (2000/14/EG)

Benötigte benannte Stelle (2000/14/EG)

Name: SNCH
Adresse: 11, Route de Sandweiler 5230 Sandweiler Luxemburg
Bezeichnung/Technische Dokumentation Nr.: SNCH*2000/14*2005/88*2910*02/TCGM2810-02
EU-försäkran om överensstämmelse

Produktdentifiering
Produkt: Gräsklippare
Marke: BARONESS
Typ: GM2810
Version(er): A
Serienummer startar på: 11006
Uppmätt ljudnivå: LWA 104,30 dB
Garanterad ljudnivå: LWA 105 dB
Tillverkare: Kyoeisha Co., Ltd.
Adress: 1-26 Miyuki-cho, Toyokawa, Aichi-pref., Japan

Uppfyller följande direktiv
2006/42/EG Maskindirektivet
2014/30/EU Elektromagnetisk kompatibilitet (EMC)
2000/14/EG Burretmission från utomhusutrustning

Följande kravspecifikationer har följts vid konstruktion och tillverkning
ISO 12100 : 2010 (2006/42/EG)
ISO 5395-1 : 2013 (2006/42/EG)
ISO 5395-3 : 2013 (2006/42/EG)

Teknisk dokumentation
Innehavarens namn: Kyoeisha Co., Ltd.
Innehavarens adress: 1-26 Miyuki-cho, Toyokawa, Aichi-pref., Japan
Den tekniska filen (2006/42/EG) har tagits fram av
Namn: Kyoeisha U.K.Ltd.
Adress: Unit 5 Hatch Industrial Park Greweil Road, Basingstoke Hampshire RG24 7NG, Storbritannien

Förfarande för bedömning av överensstämmelse
Intern produktionskontroll: Modul A (2006/42/EG)
EG-typprovning: Modul B (2014/30/EU)
Intern kontroll av produktion med fastställande av teknisk dokumentation och periodiska kontroller (2000/14/EG)
Anmält organ (2000/14/EG)
Namn: SNCH
Adress: 11, Route de Sandweiler 5230 Sandweiler Luxembourg
Certifikat/TEknisk dokumentation nummer: SNCH*2000/14*2005/88*2910*02/TCGM2810-02
