"Required reading"
Read this manual before using the machine.
Thank you for purchasing the Baroness product.
This manual describes the proper handling, adjustment, and inspection of your product. We hope you will use the product safely, and take advantage of its best performance.
For details on the handling, adjustment and inspection of the main vehicle, refer to the Owner's Operating Manual for the main vehicle.

**Suitable Baroness Main Vehicles**

Baroness Main Vehicles that can be equipped with MC Mower Units are listed below.

Read this manual carefully to ensure that you thoroughly understand how to properly operate and maintain the product, and to avoid causing injury to yourself or others.

The operator is responsible for operating the product properly and safely.

Maintenance should only be performed by a certified specialist.

If you have any questions concerning maintenance or genuine parts, please contact a Baroness dealer or Kyoeisha.

When making inquiries about the product, please specify the product’s model designation and serial number.

When loaning or transferring the product, please also provide this manual together with the product.

Kyoeisha Co., Ltd.

**Warning Symbols**

This manual uses the following warning symbols for handling precautions that are important for your safety.

<table>
<thead>
<tr>

Introduction

Precautionary Statement

Caution

The information described in this manual is subject to change for improvement without prior notice. When replacing parts, be sure to use genuine Baroness parts or parts designated by Kyoeisha. Note that the Baroness product warranty may not apply to defects caused by the use of parts from other companies.

Prior to use, carefully read the following manuals to thoroughly understand the contents for safe and correct operation.

- Baroness Owner’s Operating Manual

Purpose

This mower unit is intended for cutting turf grass at golf courses. Do not use this machine in any way other than its intended purpose, and do not modify the machine. Operating this mower unit for other purposes and modifying it may be very dangerous and may cause damage to the machine.

Failure to adequately follow these safety precautions may cause an accident resulting in injury or death.

**Danger**

This product is designed to ensure safe operation and has been tested and inspected thoroughly before shipment from the factory. The product is equipped with safety devices to prevent accidents. However, whether the product demonstrates its original performance level depends on the manner in which it is operated and handled, as well as the manner in which it is managed on a daily basis. Inappropriate use or management of the product may result in injury or death. Observe the following safety instructions to ensure safe operation.

**Safe Operating Practices**

Read Safe Operating Practices described in the Owner's Operating Manual of Baroness main vehicle equipped with this mower unit thoroughly.
Recycle and Waste Disposal ............... Page 2-2

About Recycle .................................................. Page 2-2
About Waste Disposal ......................... Page 2-2
Recycle and Waste Disposal

About Recycle

Recycling battery etc. is recommended for environmental conservation and economical use of resources. It may be required by local laws.

About Waste Disposal

Make sure that waste generated when servicing or repairing the machine is disposed of in accordance with local regulations. (e.g. waste oil, antifreeze, rubber products, and wires etc.)

The values in the brackets [ ] are for CR brush type B.
Features of The MC Mower Unit

1. Equipped with a 6.4-inch (163 mm) -diameter reel cutter (cutting cylinder).
2. Blade engagement can be adjusted by changing the reel cutter (cutting cylinder) position without changing the position and angle of the bed knife (bottom blade), and therefore the bed knife attitude does not change due to wear of the reel cutter.
3. The angle of the bed knife (bottom blade) can be adjusted according to the lawn conditions.
4. The front roller is a grooved roller that will not press down the lawn.
5. Grass clippings can be discharged either forward or backward.
6. The grass catcher can be installed.
7. The groomer can be installed.
8. The CR brush can be installed onto the rear roller.
9. The groomer and CR brush can be installed at the same time.
10. The scraper can be installed on the front and rear roller.

Safety Signs and Instruction Signs

About Safety Decals and Instruction Decals

Important

Safety decals and instruction decals are attached to this mower unit. Make sure that decals are preserved in their entirety. If they are damaged, become dirty, or peel off, replace them with new ones.

Part numbers for decals that need to be replaced are listed in the parts catalog. Order them from a Baroness dealer or Kyoeisha.

Handling Precautions

Important
This manual contains descriptions for handling the mower unit. For details on handling the main vehicle, refer to this manual and the Owner’s Operating Manual for the main vehicle.

Inspections
Inspect the machine according to the maintenance schedule so that you will be able to take advantage of its optimum performance for a long period of time.

Reel Cutter (Cutting Cylinder) and Bed Knife (Bottom Blade)

Inspection of Reel Cutter (Cutting Cylinder) and Bed Knife (Bottom Blade)

Caution
Wear gloves when touching edged tools to avoid cutting your hands.

The reel cutter (cutting cylinder) and bed knife (bottom blade) may become dull due to frequent use, objects crushed during mowing, or damage caused during transportation. Inspect the reel cutter (cutting cylinder) and bed knife (bottom blade), and if necessary, adjust the blade engagement, perform back lapping, or resharpen or replace the reel cutter (cutting cylinder) and the bed knife (bottom blade).

1. Check to see whether or not the edge of the reel cutter (cutting cylinder) and the bed knife (bottom blade) are too blunt to cut.
2. Make sure that the reel cutter (cutting cylinder) and the bed knife (bottom blade) are not cracked.
3. Check to see how much the reel cutter (cutting cylinder) and the bed knife (bottom blade) are worn.
4. Make sure that the reel cutter (cutting cylinder) and the bed knife (bottom blade) have not changed color due to heat from grinding.
5. Check to see whether or not the second edge face (relief) remains at the point of reel cutter (cutting cylinder).

6. Make sure that the welding between the reel cutter (cutting cylinder) and the disc has not come off.

Cover

Inspection of Covers

Warning
If you have removed the covers during inspection, be sure to securely install them in their original positions. If a cover remains removed, the operator may come into contact with rotating parts or belts and foreign objects may fly off, possibly resulting in injuries.

1. Make sure that there is no wear or deterioration of the reel cover and all other covers.
2. Make sure that there is no damage to the reel cover and all other covers.
3. Make sure that there is no interference with moving parts due to deformation of the reel cover and all other covers.
4. Make sure that the reel cover and all other covers are installed in their appropriate positions.

Belt

Inspection of Belt

Caution
The engine must be stopped when the belt is inspected.

Caution
If you have removed the cover during inspection, make sure that you replace it in the original position securely. If the cover remains removed, the operator may come in contact with the rotating objects or belt, possibly resulting in injuries.

1. Press the middle of the belt with your finger to check the belt tension.
2. Make sure that there are no cracks, damage or abnormal wear.
Roller

Inspection of Rollers

Bearing wear due to frequent use or bearing damage caused by water infiltration may prevent the roller from rotating smoothly. Inspect the roller and, if necessary, replace parts such as oil seals and bearings.

1. Make sure that there is no abrasion nor adhesion of the roller.
2. Make sure that there is no wear of the roller shaft.
3. Make sure that there is no wear nor damage of the oil seal.
4. Make sure that there is no wear nor rust of the bearing.
5. Make sure that there is no play in the roller shaft.

Groomer

Inspection of Groomer

Note:
Depending on the specifications, this function may not be available.
The operating efficiency may be reduced due to frequent use, objects crushed during operation, or damage to vertical blades or the shaft during transportation.
In addition, bearing wear or bearing damage caused by water infiltration may prevent the shaft from rotating smoothly.
Inspect the groomer and, if necessary, replace parts such as vertical blades or bearings.

1. Make sure that the vertical blades are not cracked.
2. Check how much the vertical blades are worn.
3. Make sure that the shaft is not worn nor bent.
4. Make sure that there is no wear nor rust of the bearing.
5. Make sure that there is no play in the groomer shaft.

CR brush

Inspection of CR Brush

Note:
Depending on the specifications, this function may not be available.
Bearing wear due to frequent use or bearing damage caused by water infiltration may prevent the brush from rotating smoothly.
Inspect the brush and, if necessary, replace parts such as bearings.

1. Make sure that there is no abrasion nor adhesion of the brush.
2. Make sure that there is no wear of the brush shaft.
3. Make sure that there is no abnormality in the brush.
4. Make sure that there is no play in the fit of the bearing and the housing.
5. Make sure that there is no play in the brush shaft.
Scraper

Inspection of Scraper

- Inspection of Front Scraper

  Note:
  Depending on the specifications, this function may not be available.
  The operating efficiency may be reduced due to frequent use, objects crushed during
  operation, or damage during transportation.
  Inspect the scraper, and replace any parts if necessary.
  1. Make sure that there is no damage nor deformation of the scraper.
  2. Make sure that there is no contact between the scraper and roller.

- Inspection of Rear Scraper (Rod Type)

  Note:
  Depending on the specifications, this function may not be available.
  The operating efficiency may be reduced due to frequent use, objects crushed during
  operation, or damage during transportation.
  Inspect the scraper, and replace any parts if necessary.
  1. Make sure that there is no damage to or deformation of the scraper.
  2. Make sure that there is no adhesion on the scraper mount.

- Inspection of Rear Scraper (Wire Type)

  Note:
  Depending on the specifications, this function may not be available.
  The operating efficiency may be reduced due to frequent use, objects crushed during
  operation, or damage during transportation.
  Inspect the scraper, and replace any parts if necessary.
  1. Make sure that there are no breaks nor sagging in the scraper (wire).
  2. Make sure that there is no contact between the scraper and roller.
Tightening Torques

Refer to the Tightening Torque table.
Note that the Baroness product warranty may not apply to defects caused by incorrect or overtorque tightening, etc.

---

Standard Tightening Torques
Bolts and Nuts

---

As to the bolts and nuts without any special instruction, tighten them in appropriate tightening torque with proper tool.
Too much tightening may cause the looseness or damage of the screw.
The strength of tightening is determined by types of screws, strength, the friction of thread face or base face and others.
The table below is for the galvanized or parkerized bolts.
In case that the strength of internal thread is weak, it is not applied.
Do not use rusty or sand attached "screw."
Otherwise, it may cause insufficient tightening even if you apply the specified tightening torque.
The friction of the screw face becomes higher and the tightening torque is canceled out by the friction, therefore sufficient tightening cannot be applied.
If "screw" is wet by water or oil, do not tighten it with normal tightening torque.
If the screw is wet, the torque coefficient will get smaller and it may result in too much tightening.
Too much tightening may cause looseness by the screw stretched or result in damage.
Do not use a bolt experienced too much burden.
Using the impact wrench requires the skill.
Do exercise as much as possible for steady tightening.

Adjustment before Work

Adjustment of Blade Engagement

**Warning**
Make sure that the parking brake is firmly applied before performing the operation.

**Caution**
Be sure to perform this operation on your own.

**Caution**
When handling the reel cutter (cutting cylinder) or bed knife (bottom blade), wear gloves to protect your hands. Pay attention not to let the reel cutter (cutting cylinder) catch your gloves. Otherwise, you may injure your hand or fingers.

**Important**
If the CR brush is installed (the mower unit equipped with only CR brush), loosen the left and right bolts and nuts used to install the CR brush before adjusting the blade engagement. After adjusting the blade engagement, adjust the CR brush, and then firmly tighten the loosened bolts and nuts.

1. Stop the engine.
2. Shift the reel rotation/stop switching lever to the "Stop" position.

3. With the cutter adjustment nut, adjust the engagement between the reel cutter (cutting cylinder) and the bed knife (bottom blade) so that newspaper (two to three sheets) will be cut by the edge of both blades when the blades in their entirety come slightly into contact with each other.

4. Insert two or three strips of newspaper into the space between the reel cutter (cutting cylinder) and the bed knife (bottom blade) at an angle of 90 degrees. Then, rotate the reel cutter (cutting cylinder) counter-clockwise (when you face the mower unit from the left) by hand to check the sharpness of the blades.

Check the sharpness of the entire range (at three or four points) of the reel cutter (cutting cylinder).

- If there is a gap between the blade edges: Loosen the cutter adjustment nut to apply more contact pressure between the reel cutter (cutting cylinder) and the bed knife (bottom blade).
- If the reel cutter (cutting cylinder) is too tight to turn: Tighten the cutter adjustment nut to reduce the contact pressure between the reel cutter (cutting cylinder) and the bed knife (bottom blade).
- If the blades still cannot cut well: Perform back lapping of the reel cutter (cutting cylinder) and the bed knife (bottom blade).
Adjustment of Cutting Height

Caution
Do not perform the operation with any other persons.

Adjust the cutting height to fit your cutting work.

1. Set the enclosed cutting height gauge.
   [1] Set the small screw for cutting height setup to the cutting height.
   [2] Set the angle of the bed knife (bottom blade) with the small screw for bed knife angle setup.
   "Bed Knife (Bottom Blade) Angle Table" (Page 4-10)

2. Position the small screw for cutting height setup set on the cutting height gauge as well as the small screw for bed knife angle setup against the bed knife (bottom blade), and then adjust the rear roller.
   [1] Adjust the left and right ends of the bed knife (bottom blade) until it is level, and then determine the position of the rear roller based on the angle of the bed knife (bottom blade).

[2] Loosen the cutting height adjustment nuts, and then adjust the rear roller so that it comes into contact with the cutting height gauge.
Since the rear roller cannot be accurately adjusted if the front roller is in contact with the cutting height gauge, raise the front roller so it is not in contact with the cutting height gauge.

3. After making adjustments, firmly tighten the cutting height adjustment nuts.
4. Loosen the cutting height adjustment nuts, and then adjust the front roller so that it comes into contact with the cutting height gauge.
5. After making adjustments, firmly tighten the cutting height adjustment nuts.

Bed Knife (Bottom Blade) Angle Table
Make adjustments according to the conditions based on a bed knife (bottom blade) angle of 5°.

<Example>
For a bed knife (bottom blade) angle of 5° at a cutting height of 15.0 mm (0.59 in), set the height of the bottom of the bed knife (bottom blade) to 12.0 mm (0.47 in).

<table>
<thead>
<tr>
<th>Bed knife (bottom blade) angle (θ)</th>
<th>Value of (B)</th>
</tr>
</thead>
<tbody>
<tr>
<td>7°</td>
<td>Cutting height (A)-0.6 mm (-0.02 in)</td>
</tr>
<tr>
<td>6°</td>
<td>Cutting height (A)-1.8 mm (-0.07 in)</td>
</tr>
<tr>
<td>5°</td>
<td>Cutting height (A)-3.0 mm (-0.12 in)</td>
</tr>
<tr>
<td>4°</td>
<td>Cutting height (A)-4.2 mm (-0.17 in)</td>
</tr>
<tr>
<td>3°</td>
<td>Cutting height (A)-5.4 mm (-0.21 in)</td>
</tr>
<tr>
<td>2°</td>
<td>Cutting height (A)-6.6 mm (-0.26 in)</td>
</tr>
<tr>
<td>1°</td>
<td>Cutting height (A)-7.8 mm (-0.31 in)</td>
</tr>
</tbody>
</table>

Adjustment of Cutter Adjustment Spring
If the diameter of the reel cutter (cutting cylinder) becomes smaller, adjust the cutter adjustment spring.
1. Adjust the blade engagement.
2. Loosen the pipe with cutter adjustment screw and adjust it so that the length of the spring coil is approximately 27.0 mm (1.06 in).

Adjustment of Reel Cover (Variable Type)
The angle of the reel cover can be adjusted. Loosen the left and right bolts securing the reel cover, and then adjust the angle of the cover. If the grass catcher is installed, position the reel cover as follows.
· Front collection: Close the reel cover.
· Rear collection: Open the reel cover.
Adjustment of Groomer

Note:
Depending on the specifications, this function may not be available.

Important
Adjust the groomer height so that it is the same level on the right and left sides.

Important
Set the groomer height more than 5.0 mm (0.2 in) from the ground. If it is set lower, the groomer shaft, bearings, gears, etc., may be damaged.

Adjust the groomer height according to the grooming work.
Note: While the groomer is not used, raise the groomer height.
1. Set the small screw for groomer setup of the cutting height gauge to the desired height.

2. Loosen the nuts securing the right and left rod holders.

3. Lower the right and left rod holders to the bottoms of the long holes.

4. Tighten the nuts to firmly secure the right and left rod holders.

5. Position the front and rear rollers against the cutting height gauge at the right and left ends of the mower unit.

<table>

</tr>
</tbody>
</table>
Adjust the position so that the vertical blade can make contact with the small screw for groomer setup.

Adjustment of Groomer Spring

6. Adjust the groomer height with the groomer adjustment nut.
7. Follow the same steps to adjust the groomer height on the opposite side.
8. Bring the cutting height gauge into contact with the front and rear rollers at the left and right ends of the mower unit again, and check that the groomer is at the desired height.

Adjustment of CR Brush

Note:
Depending on the specifications, this function may not be available.

Important
Do not place the brush in contact with the rear roller too tightly. It will cause belt slip and break.

Important
The rotating CR brush prevents grass clippings, etc., from attaching to the rear roller.

1. Loosen the left and right bolts and nuts used to install the CR brush.
2. Adjust the CR brush so that there is a clearance of 0 to 1.0 mm (0 to 0.039 in) between it and the rear roller, and then firmly tighten the loosened bolts and nuts.
Adjustment of CR Brush (installed together with Groomer)

Note:
Depending on the specifications, this function may not be available.

**Important**
Do not place the brush in contact with the rear roller too tightly.
It will cause belt slip and break.

**Important**
The rotating CR brush prevents grass clippings, etc., from attaching to the rear roller.

1. Loosen the left and right bolts and nuts used to install the CR brush.
2. Adjust the CR brush so that there is a clearance of 0 to 1.0 mm (0 to 0.039 in) between it and the rear roller, and then firmly tighten the loosened bolts and nuts.

Adjustment of Scraper

Adjustment of Front Scraper

Note:
Depending on the specifications, this function may not be available.

**Important**
Do not place the scraper in contact with the front roller too tightly.
It will cause deformation of the scraper and damage of the front roller.

The scraper prevents grass clippings, etc., from attaching to the front roller.
1. Loosen the left and right bolts and nuts of the scraper.

2. Adjust the scraper so that there is a clearance of 2.0 to 3.0 mm (0.079 to 0.118 in) between it and the outer diameter surface of the front roller, and then firmly tighten the loosened bolts and nuts.
Adjustment of Rear Scraper (Wire Type)

Note:
Depending on the specifications, this function may not be available.

Important
Do not place the scraper in contact with the rear roller too tightly.
It will cause the scraper break and slack.

The scraper prevents grass clippings, etc., from attaching to the rear roller.
1. Loosen the left and right lock nuts and nuts of the scraper.
2. Adjust the scraper so that there is a clearance of 2.0 to 3.0 mm (0.079 to 0.118 in) between it and the rear roller, and then secure it with the lock nuts.

ON/OFF Mark
K4203000080
STICKER, ON/OFF
It shows ON/OFF of groomer rotation.
Groomer Clutch Lever

Note:
Depending on the specifications, this function may not be available.

⚠️ Caution
The lever should be operated while the engine is stopped, and adjusted to the position suitable for your work.

Important
Do not pull the groomer clutch lever upward. The groomer clutch lever may get out of the groomer case and the steel ball may fall into the case.

The groomer clutch lever is located on the groomer installed on each mower unit and is used during grooming.
When the groomer clutch lever is set to the "ON" position, the groomer rotates. When the groomer clutch lever is set to the "OFF" position, the groomer stops rotating.
When grooming is not being performed, be sure to set the lever to the "OFF" position.

Before Long-Term Storage

- Remove any dirt, grass, debris, or oil stains completely.
- Supply oil and apply grease to appropriate parts.

Maintenance Precautions

**Caution**
First, learn well the maintenance operations you plan to perform.

**Important**
Use tools appropriate for each maintenance operation.

**Important**
For the safe and best performance of your machine, use Baroness genuine parts for replacement and accessories. Please note that our product warranty may be void if you use non-genuine parts for replacement or accessories.

Greasing

About Greasing
Since there may be adhesion or damage due to lack of grease on moving parts, they must be greased.
Add urea-based No. 2 grease in accordance with the Maintenance Schedule.
Other locations where the specified grease or lubricant is used are indicated in "Greasing Points".
Add grease using the specified grease or lubricant.

Greasing Points
Grease nipples are installed in the following locations.

<table>
<thead>
<tr>
<th>Location</th>
<th>No. of greasing points</th>
<th>Greasing period</th>
</tr>
</thead>
<tbody>
<tr>
<td>Front roller shaft</td>
<td>2</td>

4. Groomer case
Note: Depending on the specifications, this function may not be available.
There are five points on the groomer case.

5. Groomer shaft
Note: Depending on the specifications, this function may not be available.
There is one point each on the left and right of the groomer shaft.

Groomer case side

Reel motor side

Note: Depending on the specifications, this function may not be available.
6. CR brush tension lever  
   (Groomer + CR brush installation)  
   Note:  
   Depending on the specifications, this function may not be available.

If the edges of the reel cutter (cutting cylinder) and the bed knife (bottom blade) become blunt and make cutting difficult, perform back lapping in the following procedure.

**Warning**

The reel cutter rotates during back lapping work.  
Keep hands and feet away from moving parts.

**Caution**

Be careful not to inhale exhaust gas during back lapping.

**Caution**

Do not perform back lapping work with any other persons.

1. Prepare newspaper cut into strip, abrasive with back lapping powder mixed with oil or gel compound (Baroness genuine abrasive), and a brush.

<table>
<thead>
<tr>
<th>Back Lapping_001</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
</tr>
<tr>
<td>2</td>
</tr>
<tr>
<td>3</td>
</tr>
<tr>
<td>4</td>
</tr>
</tbody>
</table>

**Note:**  
The mixture ratio of the abrasive is 1 part back lapping powder (#150 - #200) : 3-4 parts oil.

---

**Maintenance Work**

**Cleaning of Mower Unit**

**Important**

While cleaning, do not allow water on the sealed parts of the reel shaft. (Avoid high-pressure water cleaning.) Otherwise, it may cause damage to the machine.

Be sure to clean the mower unit after use.  
1. Stop the engine, and then remove the key.  
2. Carefully clean the front and back of the mower unit with water or compressed air.  
3. Remove any grass wrapped around the reel cutter (cutting cylinder).

**Back Lapping**

Back lapping is work similar to sharpening a cooking knife. If the edges of the reel cutter (cutting cylinder) and the bed knife (bottom blade) become blunt and make cutting difficult, both the reel cutter (cutting cylinder) and the bed knife (bottom blade) should be simultaneously sharpened by reversing the reel cutter (cutting cylinder) with an abrasive paste applied. However, back lapping is a temporary measure and would not restore the sharpness completely.
Caution
When handling the reel cutter or bed knife, wear gloves to protect your hands.
Pay attention not to let the reel cutter catch your gloves, etc. Otherwise, your hand or fingers may be injured.

Important
Check sharpness with the blade engagement condition after cutting.

2. Stop the engine, and then apply the parking brake.
3. Set the reel rotation/stop switching lever to the "Stop" position.

4. Insert two or three strips of newspaper into the space between the reel cutter and the bed knife at an angle of 90 degrees. Then, rotate the reel cutter counterclockwise (as seen from the left side of the mower unit) by hand to check the sharpness.

5. Check the sharpness along the entire reel cutter surface (around 3 to 4 positions).
6. Check the sharpness and mark areas that are sharp with chalk or similar.

7. Set the reel rotation/stop switching lever of the hydraulic motors for the mower units that require back lapping to the "Rotation" position.
   For mower units that do not require back lapping, set the lever to the "Stop" position.
8. Sit on the seat, and then start the engine.
   Note: The engine will not start if the reel rotation switch is to the "Rotation" side.
9. Lower all mower units to the ground.
10. Move the reel reverse switch to the "Reverse" side.
11. Run the engine at low speed.
12. Move the reel rotation switch to the "Rotation" side and rotate the reel cutter for back lapping.
13. Adjust the rotation speed of the reel cutter with the reel rotation/stop switching lever.
14. Apply abrasive to a brush, and apply evenly to areas of the reel cutter that are sharp using the chalk markings as a guide. (Never apply it to areas that have poor sharpness.)
15. Keep the engine rotating for a while until there is no contact noise, and move the reel rotation switch to the "Stop" side to stop the rotation of the reel cutter.
16. Raise all mower units.
17. Stop the engine.
18. Wash off the abrasive applied to the reel cutter or wipe it clean with waste cloth or similar, and check the sharpness.
19. Repeat the procedures from 3 through 18 for back lapping until the entire reel cutter surface (around 3 to 4 positions) is even.
20. Lower all mower units to the ground.
21. Next, apply abrasive across the entire reel cutter blade edge for final back lapping.
22. Move the reel rotation switch to the "Stop" side, stop the reel rotation, stop the engine, and carefully wash off all the remaining abrasive completely until it is clean.
23. Move the reel reverse switch to the "Normal" side.
24. Return the reel rotation/stop switching lever to the "Stop" position.
25. Adjust the blade engagement while checking the sharpness.
Sharpening of Reel Cutter (Cutting Cylinder)

The sharpening of the reel cutter (cutting cylinder) consists in maintaining its roundness and creating a relief (second edge face). This work should be performed if the sharpness cannot be restored, even after back lapping, or if the relief (second edge face) has worn away.

Sharpen the reel cutter (cutting cylinder) when the sharpness cannot be restored, even after back lapping, or when the relief (second edge face) has worn away, there is full contact or back lapping takes too much time.

In addition, if the reel cutter (cutting cylinder) becomes worn and its shape conical, perform cylindrical grinding to return it to a cylindrical shape.

For sharpening the reel cutter (cutting cylinder), contact your dealer or Baroness unless you have a grinding machine.

<table>
<thead>
<tr>
<th>Dimensions</th>
<th>New</th>
<th>Usage limit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dimension A (Outer diameter of reel cutter (cutting cylinder))</td>
<td>163 mm (6.42 in)</td>
<td>143 mm (5.63 in)</td>
</tr>
<tr>
<td>Dimension B (Distance from blade edge to outer edge of reel cutter (cutting cylinder) shaft)</td>
<td>68.8 mm (2.71 in)</td>
<td>58.8 mm (2.31 in)</td>
</tr>
</tbody>
</table>

Note:
The outer diameter of the reel cutter (cutting cylinder) shaft is 25.4 mm (1.00 in).

The criteria for sharpening the reel cutter (cutting cylinder) are described below. However, these criteria are only a reference and do not guarantee performance of a reel cutter (cutting cylinder).

1. If the outer diameter of the reel cutter (cutting cylinder) after sharpening is more than the usage limit, the reel cutter (cutting cylinder) can be sharpened.

Caution

Both the reel cutter (cutting cylinder) and the bed knife (bottom blade) are edged tools. Handle them carefully, since they could cut your hands and feet.

Caution

Wear gloves when touching edged tools to avoid cutting your hands.
2. Sharpening is necessary when the reel cutter (cutting cylinder) reaches a condition described below.

[1] When the sharpening width (length of contacting surface of bed knife (bottom blade)) for the outer diameter of the reel cutter (cutting cylinder) is greater than the usage limit.

<table>
<thead>
<tr>
<th>Outer diameter of reel cutter (new part)</th>
<th>Usage limit of sharpening width for outer diameter of reel cutter (cutting cylinder)</th>

[2] When the edges become blunt or the blade edge cannot be formed with back lapping

[3] When the reel cutter (cutting cylinder) becomes worn and its shape conical, or when blade engagement adjustment cannot be performed

Replacement of Reel Cutter (Cutting Cylinder)

⚠️ Caution
Both the reel cutter (cutting cylinder) and the bed knife (bottom blade) are edged tools. Handle them carefully, since they could cut your hands and feet.

⚠️ Caution
Wear gloves when touching edged tools to avoid cutting your hands.

The criteria for replacing the reel cutter (cutting cylinder) are described below. However, these criteria are only a reference and do not guarantee performance like that of a new reel cutter (cutting cylinder).

1. When the outer diameter of the reel cutter (cutting cylinder) is less than the usage limit

<td>143 mm (5.63 in)</td>
</tr>
<tr>
<td>68.8 mm (2.71 in)</td>
<td>58.8 mm (2.31 in)</td>
</tr>
</tbody>
</table>

Note:
The outer diameter of the reel cutter (cutting cylinder) shaft is 25.4 mm (1.00 in).
Replacement of Bed Knife (Bottom Blade)

**Caution**
Both the reel cutter (cutting cylinder) and the bed knife (bottom blade) are edged tools. Handle them carefully, since they could cut your hands and feet.

**Caution**
Wear gloves when touching edged tools to avoid cutting your hands.

The criteria for replacing the bed knife (bottom blade) are described below.
1. When the reel cutter (cutting cylinder) is ground
2. When the reel cutter (cutting cylinder) is replaced
3. When the bed knife (bottom blade) is worn High-speed-steel-tipped blade
Replace the bed knife (bottom blade) before it no longer has a tip.

Adjustment of Belt Tension

**Warning**
Be sure to stop the engine before adjusting the belts.

**Caution**
If you have removed covers, etc., be sure to securely install them in their original positions. If covers, etc., remain removed, the operator may come in contact with rotating parts or belts, or foreign objects may fly off, possibly resulting in injuries.

**Important**
For the specified value of belt tension, refer to Adjusted Values. After rotating the belt several times, check that it has the specified tension.

If the belt becomes slack due to frequent use, it may jump or slip. In addition, if it is overtightened, it may wear prematurely. If necessary, adjust it, and always check the belt for appropriate tension.
CR Brush Drive Belt (Installation with only CR Brush)

Note:
Depending on the specifications, this function may not be available.
1. Remove the belt cover.
2. Check the belt tension.
3. If the belt tension is inappropriate, adjust the belt tension with the tension pulley adjustment bolt.

The belt tension is appropriate when the belt slacks by approximately 5.0 to 6.0 mm (0.197 to 0.236 in) when you apply a force of 10.0 N (1.0 kgf) with your finger to the belt at the middle point between the pulleys.

CR Brush Drive Belt (Installation with Groomer at the same time)

Note:
Depending on the specifications, this function may not be available.
1. Remove the belt cover.
2. Check the belt tension.
3. If the belt tension is inappropriate, move the bolt to adjust the belt tension.

The belt tension is appropriate when the length of the spring coil is 63.0 to 65.0 mm (2.48 to 2.56 in).
