"Required reading"
Read this manual before using the machine.
California Proposition 65
(For California, USA)

⚠️ WARNING:
Operating, servicing and maintaining a passenger vehicle or off-road vehicle can expose you to chemicals including engine exhaust, carbon monoxide, phthalates, and lead, which are known to the State of California to cause cancer and birth defects or other reproductive harm. To minimize exposure, avoid breathing exhaust, do not idle the engine except as necessary, service your vehicle in a well-ventilated area and wear gloves or wash your hands frequently when servicing your vehicle. For more information go to www.P65Warnings.ca.gov/passenger-vehicle.

California Spark Arrester
(For California, USA)

⚠️ Warning
Operation of this equipment may create sparks that can start fires around dry vegetation. A spark arrester may be required. The operator should contact local fire agencies for laws or regulations relating to fire prevention requirements.

The engine of this machine is not equipped with a spark arrester. In some areas there are local, state, or federal regulations requiring that a spark arrester be used on the engine of this machine. The recommended spark arrester for this machine is Part No. 49025N Spark Arrester made by Nelson Global Products.
Thank you for purchasing the Baroness product. This manual describes the proper handling, adjustment, and inspection of your product. We hope you will use the product safely, and take advantage of its best performance. For details on the handling, adjustment and inspection of the attachments, refer to the Owner's Operating Manual for the attachments.

**Keeping the Owner's Operating Manual**

Keep this Manual in the box on the left side of the ROPS.
Introduction

Read this manual carefully to ensure that you thoroughly understand how to properly operate and maintain the product, and to avoid causing injury to yourself or others.

The operator is responsible for operating the product properly and safely.

Maintenance should only be performed by a certified specialist.

If you have any questions concerning maintenance or genuine parts, please contact a Baroness dealer or Kyoeisha.

When making inquiries about the product, please specify the product's model designation and serial number.

When loaning or transferring the product, please also provide this manual together with the product.

Kyoeisha Co., Ltd.

Warning Symbols

This manual uses the following warning symbols for handling precautions that are important for your safety.

<table>
<thead>
<tr>
<th>Warning symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image.png" alt="Warning symbol" /></td>
<td>This symbol indicates the articles regarding “Danger,” “Warning,” or “Caution.” Those articles describe important safety precautions and so read them carefully to understand completely before operating the machine. Failure to adequately follow these safety precautions may cause an accident.</td>
</tr>
<tr>
<td><img src="image.png" alt="Danger" /></td>
<td>This symbol indicates that serious injury or death will occur if the warning is ignored.</td>
</tr>
<tr>
<td><img src="image.png" alt="Warning" /></td>
<td>This symbol indicates that serious injury or death may occur if the warning is ignored.</td>
</tr>
<tr>
<td><img src="image.png" alt="Caution" /></td>
<td>This symbol indicates that injury or damage to property may occur if the warning is ignored.</td>
</tr>
<tr>
<td><img src="image.png" alt="Important" /></td>
<td>This symbol indicates precautions on the mechanism of the machine.</td>
</tr>
</tbody>
</table>
Precautionary Statement

⚠️ Caution

The information described in this manual is subject to change for improvement without prior notice.
When replacing parts, be sure to use genuine Baroness parts or parts designated by Kyoeisha.
Note that the Baroness product warranty may not apply to defects caused by the use of parts from other companies.

Prior to use, carefully read the following manuals to thoroughly understand the contents for safe and correct operation.
• Baroness Owner's Operating Manual
• The Engine's Owner's Manual
• The Battery's Owner's Manual

Purpose

This product is intended for cutting turf grass at golf courses.
Do not use this product in any way other than its intended purpose, and do not modify this product.
Operating this product for other purposes and modifying it may be very dangerous and may cause damage to the product.
In addition, this product is not authorized for operation as a special motor vehicle. Do not operate it on public roads.

Failure to adequately follow these safety precautions may cause an accident resulting in injury or death.

**Danger**

This product is designed to ensure safe operation and has been tested and inspected thoroughly before shipment from the factory. The product is equipped with safety devices to prevent accidents. However, whether the product demonstrates its original performance level depends on the manner in which it is operated and handled, as well as the manner in which it is managed on a daily basis. Inappropriate use or management of the product may result in injury or death. Observe the following safety instructions to ensure safe operation.

**Safe Operating Practices**

**Training**

1. Read this manual and other training material carefully. Be familiar with the controls, safety signs, and the proper use of the equipment.
2. If the operator or mechanic can not read English it is the owner's responsibility to explain this manual to them.
3. All operators and mechanics should seek and obtain professional and practical instruction. The owner is responsible for training the users. Such instruction should emphasize.
   - The need for care and concentration when working with ride-on machines.
   - Control of a ride-on machine sliding on a slope will not be regained by the application of the brake.
   - The main reasons for loss of control are
     - Insufficient wheel grip
     - Being driven too fast
     - Inadequate braking
     - The type of machine is unsuitable for its task
     - Lack of awareness of the effect of ground conditions, especially slopes
     - Incorrect hitching and load distribution
4. Never allow children or people unfamiliar with these instructions to use or service the machine. Local regulations may restrict the age of the operator.
5. The owner/user can prevent and is responsible for accidents or injuries occurring to themselves, other people, or property.
6. Keep in mind that the owner, operator, and mechanic are responsible for accidents or hazards occurring to other people or their property.
7. The ROPS is an integral and effective safety device. Do not remove or alter the ROPS.
8. Replace a damaged ROPS. Do not repair or alter.
9. You can find additional safety information where needed throughout this manual.
10. Determine the left and right sides of the machine from the normal operating position.

**Preparation**

1. Evaluate the terrain to determine what accessories and attachments are needed to properly and safely perform the job. Only use accessories and attachments approved by the manufacturer.
2. While operating, always wear substantial footwear, long trousers, hard hat, safety glasses, and ear protection. Long hair, loose clothing, or jewelry may get tangled in moving parts. Do not operate the equipment when barefoot or wearing open sandals.
3. Inspect the area where the equipment is to be used and remove all objects such as rocks, toys and wire which can be thrown by the machine.
4. Keep children out of the operating area and under the watchful care of a responsible adult other than the operator.
5. Exercise care in the handling of fuel.

**Warning**

Warning-Fuel is highly flammable. Take the following precautions.

[1] Store fuel in containers specifically designed for this purpose.
Add fuel before starting the engine. Never remove the cap of the fuel tank or add fuel while the engine is running or when the engine is hot.

Refuel outdoors only and do not smoke while refueling.

If fuel is spilled, do not attempt to start the engine but move the machine away from the area of spillage and avoid creating any source of ignition until petrol vapours have dissipated.

Replace all fuel tanks and container caps securely.

Check that operator’s presence controls, safety switches and shields are attached and functioning properly. Do not operate unless they are functioning properly.

If the brake operation is faulty or the parking brake lever has noticeable play, be sure to adjust or repair them before operating the machine.

Replace faulty mufflers.

On multi-cylinder/multi-reel machines take care as rotating one cylinder/reel can cause other cylinder/reels to rotate.

Operation

1. Do not operate the engine in a confined space where dangerous carbon monoxide fumes can collect.
2. Only operate in good light, keeping away from holes and hidden hazards.
3. Before attempting to start the engine, disengage all attachments, shift into neutral, and engage the parking brake. Only start engine from the operator’s position.
   Use seat belts if provided.
4. Remember there is no such thing as a safe slope. Travel on grass slopes requires particular care.
   To guard against overturning:
   [1] Do not stop or start suddenly when going up or downhill.
5. Never operate across the face of the slope, unless the machine is designed for this purpose.
6. Never drive the machine on a slope with an angle of gradient that is greater than that specified or in a place where there is a danger of the machine slipping.
7. Use extra care while operating machine with a grass catcher or other attachments. They can affect the stability of the machine.
8. Never operate the machine with damaged guards, shields, or without safety protective devices in place.
   Be sure all interlocks are attached, adjusted and functioning properly.
9. Do not change the engine governor settings or overspeed the engine. Operating the engine at excessive speed may increase the hazard of personal injury.
   Disengage the drive to attachments, stop the engine, and remove the ignition key in the following conditions.
   [3] Before making height adjustment unless adjustment can be made from the operator’s position.
   [5] Before checking, cleaning, or working the machine.
   [6] After striking a foreign object or if an abnormal vibration occurs.
   Inspect the machine for damage and make repairs before restarting and operating the equipment.
10. Keep hands and feet away from the cutting units and the rotating parts.
11. Do not mow in reverse unless absolutely necessary. Always look down and behind before and while backing.
12. Do not carry passengers.
13. Never operate while people, especially children, or pets are nearby.
14. Slow down and use caution when making turns and crossing roads and sidewalks.
15. Stop the blades rotating before crossing surfaces other than grass.
16. Disengage drive to attachments when transporting or not in use.
17. When using any attachments, never direct discharge of material toward bystanders nor allow anyone near the machine while in operation.
18. Do not operate the machine under the influence of alcohol or drugs.
19. Take care when loading or unloading the machine into a trailer or a truck. Load or unload the machine in a flat and safe place. Before loading or unloading, set the parking brake on the truck or trailer, stop the engine, and chock the wheels. When transporting the machine on a truck or a trailer, set the parking brake, stop the engine, and fasten the machine to the truck with a rope or other suitable restraining device that has sufficient strength. When using a loading ramp, select one with sufficient strength, length, and width and that will not cause the machine to slip.
20. Close the fuel valve before transporting the machine.
21. Use care when approaching blind corners, shrubs, trees, or other objects that may obscure vision.
22. Do not take your eyes off the road ahead. Do not operate the machine with no hands.
23. Reduce the throttle setting during engine run-out and, if the engine is provided with a shut-off valve, turn the fuel off at the conclusion of operation.
24. Do not operate the machine when there is the risk of lightning.
25. Keep a folding ROPS in the raised and locked position and use the seat belt when operating the machine.
26. Lower a folding ROPS temporarily only when absolutely necessary. Do not wear the seat belt when folded down. There is no rollover protection when a folding ROPS is in the down position.

**Maintenance and Storage**
1. Disengage drives on level ground, lower the attachments, set parking brake, stop engine and remove key from ignition. Wait for all movement to stop before adjusting, cleaning or repairing.
2. When machine is to be parked, stored, or left unattended, lower the cutting units unless a positive mechanical lock is provided.
3. To reduce the fire hazard, keep the engine, silencer/muffler, battery compartment fuel storage area, cutting unit and drives free of grass, leaves, or excessive grease. Clean up oil or fuel spillage.
4. Allow the engine to cool before storing in any enclosure.
5. Only cover the machine with a sheet after hot parts have sufficiently cooled down.
6. Never store the equipment with fuel in the tank inside a building where fumes may reach an open flame or spark.
7. If the engine is provided with a shut-off valve, shut off valve while storing or transporting.
8. Do not store fuel near flames.
9. Never allow untrained personnel to service machine.
10. Allow the engine/muffler to cool before checking/maintenance.
11. Appropriately manage and correctly use the tools necessary for servicing or adjusting the machine.
12. Use jack stands to support components when required.
13. Carefully release pressure from components with stored energy.
14. Be sure to depressurize the hydraulic system before performing maintenance operations on it such as removing hydraulic equipment.
15. Check whether line connectors in the hydraulic system are properly tightened. Before applying hydraulic pressure, check the connections of the hydraulic pressure lines and the condition of the hoses.
16. When checking the hydraulic circuit for pinhole leaks or oil leakage from nozzles, do not use your hands. Use items such as paper or corrugated cardboard to find leakage points. Be extremely careful with high-pressure oil as it may pierce your skin, resulting in an injury. If fluid is injected into the skin it must be surgically removed within a few hours by a doctor familiar with this form of injury or gangrene may result.

17. Disconnect battery before making any repairs. Disconnect the negative terminal first and the positive last. Reconnect positive first and negative last.

18. Make sure that parts such as wires are not touching each other and that their covers have not come off.

19. Use care when checking the cylinders/reels and bed knives.

   [1] Wear gloves and use caution when servicing them.

   [2] Be careful during adjustment of the machine to prevent entrapment of the fingers between moving blades and fixed parts of the machine.

20. On multi-cylinder/multi-reel machines take care as rotating one cylinder/reel can cause other cylinder/reels to rotate.

21. Keep hands and feet away from moving parts. If possible, do not make adjustments with the engine running.

22. Charge batteries in an open well ventilated area, away from spark and flames. Unplug charger before connecting or disconnecting from battery. Wear protective clothing and use insulated tools.

23. Keep all parts in good working condition and all hardware tightened. Replace all worn or damaged decals.

24. Keep all nuts, bolts and screws tight to be sure the equipment is in safe working condition.

25. Check the grass catcher frequently for wear or deterioration.

26. If the fuel tank has to be drained, do this outdoors.

27. Swallowing engine coolant can cause injury or death; keep out of reach from children and pets.
Recycle and Waste Disposal

About Recycle

Recycling battery etc. is recommended for environmental conservation and economical use of resources. It may be required by local laws.

About Waste Disposal

Make sure that waste generated when servicing or repairing the machine is disposed of in accordance with local regulations. (e.g. waste oil, antifreeze, rubber products, and wires etc.)

**Sound Pressure Level**

Sound pressure level

This machine was confirmed to have a continuous A-weighted sound pressure level of 83 dB by measuring identical machines in accordance with the procedure specified in ISO 5395-1:2013.

**Sound Power Level**

Sound Power Level

This machine was confirmed to have a sound power level of 103 dB by measuring identical machines in accordance with the procedure specified in ISO 5395-1:2013.

**Vibration Level**

Hand-Arm Vibration

This machine was confirmed not to exceed a vibration level of 2.5 m/s² to hands and arms by measuring identical machines in accordance with the procedure specified in ISO 5395-1:2013.

Whole Body Vibration

This machine was confirmed not to exceed a vibration level of 0.5 m/s² to the whole body by measuring identical machines in accordance with the procedure specified in ISO 5395-1:2013.

**Carbon Dioxide (CO₂) Emissions Measurement**

For CO₂ emissions measurement on the engine of this machine, refer to the engine's owner's manual.

Description of Regulation Decals

Serial Number Plate
The serial number plate indicates the model and serial number of the machine.

Noise Emission Decal
(For Europe)
The noise emission decal indicates the sound power level determined by measuring identical machines in accordance with the procedure specified in the EC directives.

Specification Decal
(For Europe)
CE mark indicates that the machine sold in the EU nations complies with the EU requirements.
The Specification decal indicates the CE marking, model, and weight, etc.

Year of Manufacture Decal
(For Europe)
The year of manufacture decal indicates the year when this machine was manufactured.

ROPS Compliance Decal
The ROPS compliance decal indicates the manufacturer, model, etc., in accordance with International Standard ISO 21299:2009.
ROPS Caution Decal

ROPS caution decal describes the following caution messages.
- Replace damaged ROPS.
- Do not repair or revise.

Battery Capacity Decal

(For Europe)
The battery capacity decal indicates the capacity by 20HR and CCA.

Recycle Decal

Recycle Decal illustrates Recycle Mark in accordance with local regulation.
(For Europe)

Battery Danger Decal

(For USA)
Battery Danger Decal describes handling precautions for battery.

Indicating Diesel Fuel Decal

(for USA)
It indicates the fuel to be used.
Use low sulfur or ultra-low sulfur diesel fuel (sulfur-free diesel fuel).
California Proposition 65 Decal (Riding Type)

(For the State of California, USA)
California Proposition 65 decal describes the warning messages as required by California Proposition 65.

⚠️ WARNING: Operating, servicing and maintaining a passenger vehicle or off-road vehicle can expose you to chemicals including engine exhaust, carbon monoxide, phthalates, and lead, which are known to the State of California to cause cancer and birth defects or other reproductive harm. To minimize exposure, avoid breathing exhaust, do not idle the engine except as necessary, service your vehicle in a well-ventilated area and wear gloves or wash your hands frequently when servicing your vehicle. For more information go to www.P65Warnings.ca.gov/passenger-vehicle.

Spark Arrester Warning Decal

(For the State of California, USA)
Spark arrester warning decal describes the warning messages as required by California Public Resources Code.

CALIFORNIA SPARK ARRESTER WARNING: Operation of this equipment may create sparks that can start fires around dry vegetation. A spark arrester may be required. The operator should contact local fire agencies for laws or regulations relating to fire prevention requirements.
Important

Safety decals and instruction decals are attached to this product. Make sure that they are preserved in their entirety. If they are damaged, become dirty, or peel off, replace them with new ones.

Part numbers for decals that need to be replaced are listed in the parts catalog. Order them from a Baroness dealer or Kyoeisha.

Positions of Safety Decals and Instruction Decals
Description of Safety Decals and Instruction Decals

Left panel decal

LM331--0928Z0
Decal, left panel

1. **Warning**
Read the Owner's Operating Manual.

2. **Warning**
Apply the parking brake, stop the engine, and then remove the ignition key before leaving the machine.

3. **Caution**
Flying objects - Be sure that people around the machine keep a safe distance away.

4. **Warning**
May cut your hand or leg - Keep hands and feet away from moving parts.

5. **Warning**
Be careful of exhaust emissions.

6. **Caution**
Rollover - Do not work on slopes of 15 degrees or more. When you descend a slope, drive at low speed with the mower units lowered. Fasten your seatbelt.

7. **Warning**
Rollover - Do not switch between 2WD and 3WD while traveling on downward slopes. Do not set the reel rotation switch to the "Rotation" (reel rotation) position while traveling on downward slopes. Do not travel in three-wheel drive on downward slopes.

Diesel Fuel Icon

K4209001000
Diesel fuel icon
Use diesel fuel.
Hydraulic Oil Icon

K4209000980
Hydraulic oil icon
Read the Owner’s Operating Manual.

Caution for High Temperatures Decal

K4205001920
Decal, caution for high temperatures

Caution
High temperature - Do not touch. Otherwise, you will get burned.

Fire Prohibited Decal

K4205001940
Decal, fire prohibited

Warning
Keep away from fire.

Caution to Getting Pinched Decal

K4205001930
Decal, caution to getting pinched

Caution
May pinch - There is a risk of being pinched.
Caution to Getting Entangled Decal

K4205001910
Decal, caution to getting entangled

⚠️ Warning
Watch for rotating parts - Keep your hands away from the belts while the engine is running.

Caution to Noise Decal

K4205002090
Decal, caution to noise

⚠️ Warning

Caution to Spouting Coolant Decal

K4205001970
Decal, caution for spouting coolant

⚠️ Caution
Caution for spouting coolant - Do not open while hot. High temperature - Do not touch. Otherwise, you will get burned.

Caution on Reading Owner's Operating Manual

K4205001560
Decal, read Owner's Operating Manual

⚠️ Warning
Read the Owner's Operating Manual.
Inspections

Inspect the machine according to the maintenance schedule so that you will be able to take advantage of its optimum performance for a long period of time.

Radiator

Inspection of Radiator

1. Make sure that there is no damage to the radiator.
2. Make sure that the radiator is not contaminated.

Cleaning of Radiator

Important

An unclean radiator may cause the engine to overheat or seize. It may also cause malfunction of the hydraulic system.

Important

Do not use solid objects, such as a spatula or screwdriver, or high-pressure water to clean the radiator or oil cooler. Otherwise, special fins or tubes may be damaged, possibly resulting in reduced cooling performance or coolant leakage.

1. Open the hood. "Hood" (Page 4-28)
2. Pull up the dust screen to remove it.

Coolant

Inspection of Coolant

Caution

Do not touch the radiator or coolant during engine operation or immediately after the engine has been turned off. Otherwise, you may get burned.

Caution

Inspection should take place after the engine has well cooled down.

1. Make sure that the coolant level in the reserve tank is between "FULL" and "LOW.”
Coolant Supply

**Caution**
Do not touch the radiator or coolant during engine operation or immediately after the engine has been turned off. Otherwise, you may get burned due to high temperatures.

**Caution**
Supply coolant after the engine has well cooled down.

**Caution**
The radiator cap is pressurized. If you remove the radiator cap while the engine is overheated, hot steam will burst out, possibly resulting in burns. Make sure that the water temperature and pressure are reduced, and then grab the cap with a thick cloth and gradually open the cap.

**Important**
When you supply coolant, be sure to use clean water, such as tap water.

**Important**
Tightly close the radiator cap. If the cap is loose or incorrectly installed, water may leak and the engine may overheat.

1. If the coolant level in the reserve tank is lower than the "LOW" mark, open the reserve tank cap and fill the tank with clean water up to the "FULL" mark.

2. If no coolant is in the reserve tank, follow the steps below to fill the tank with clean water.
   [1] Open the radiator cap, and then supply clean water up to the opening.
   [2] Open the reserve tank cap, and then supply clean water up to the "FULL" mark.

Oil Cooler

**Inspection of Oil Cooler**

1. Make sure that there is no damage to the oil cooler.
2. Make sure that the oil cooler is not contaminated.
Cleaning of Oil Cooler

**Important**
An unclean oil cooler may cause malfunction of the hydraulic system.

**Important**
Do not use solid objects, such as a spatula or screwdriver, or high-pressure water to clean the radiator or oil cooler. Otherwise, special fins or tubes may be damaged, possibly resulting in reduced cooling performance or coolant leakage.

If the oil cooler has been contaminated with dust, be sure to clean it. Especially after operating the machine in a dusty environment, it is important to remove dust as soon as possible.

1. Open the hood.
   "Hood" (Page 4-28)

2. Carefully clean the front and back of the oil cooler with water or compressed air.

Hydraulic Oil

Inspection of Hydraulic Oil

The oil gauge is located on the back of the hydraulic tank.

1. Raise the mower units and maintain that position on a level surface.
2. Make sure that the oil level is at the middle of the oil gauge.

Hydraulic Oil Supply

**Important**
Do not mix different types of oil.

**Important**
Use Shell Tellus S2M46 (or equivalent) as hydraulic oil.

1. Remove the rear cover.
2. If the hydraulic oil level is low, follow the steps below to supply oil.

   [1] Open the tank cap, and then supply hydraulic oil through the oil filling port until the oil level reaches the middle of the oil gauge on the hydraulic tank.

3. Start the engine, raise and lower the mower units, and turn the steering wheel left and right. Move forward and reverse repeatedly several times.
4. Raise the mower units and maintain that position on a level surface, and then check to see if the oil level is at the middle of the oil gauge. If necessary, supply oil.
5. Check underneath the machine for hydraulic oil leakage.
6. Install the rear cover.

Air Cleaner

Inspection of Air Cleaner

The air cleaner is a component that removes dirt from the intake air to prevent wear of the cylinder liners and piston rings so that the engine will always operate smoothly. A contaminated air cleaner element may cause malfunction of the engine.

1. Make sure that there is no damage to the air cleaner.
2. Make sure that the air cleaner element is not contaminated.

Cleaning of Air Cleaner

A contaminated air cleaner element may cause malfunction of the engine. To maximize the life of the engine, clean the air cleaner properly.

1. Follow the steps below to clean the air cleaner.
   [1] Unclip at two locations to remove the air cleaner cap, and then remove the air cleaner element.
   [2] While paying close attention not to damage the air cleaner element, tap a solid portion of the air cleaner element or blow compressed air from its inside to remove dust and dirt.
   If the air cleaner element is extremely contaminated, replace it with a new one.
   [3] Attach the air cleaner element to the air cleaner body.
   [4] Attach the air cleaner cap, and then fix it securely with the clips.
Battery

Inspection of Battery

**Danger**
Keep fire away while inspecting or charging the battery. The battery may explode.

**Warning**
Do not allow the battery fluid level to become lower than the LOWER LEVEL (minimum fluid level line). The battery may explode if it is used or charged while the battery fluid level is at the LOWER LEVEL (minimum fluid level line).

1. Clean the areas around the battery fluid level lines using a cloth dampened with water.
2. Make sure that the battery fluid level is between the UPPER LEVEL (maximum fluid level line) and the LOWER LEVEL (minimum fluid level line).

Supply of Battery Fluid

**Danger**
When you supply battery fluid, wear protective garments and safety glasses, etc.

1. If the battery fluid level is lower than halfway between the UPPER LEVEL (maximum) line and LOWER LEVEL (minimum) line, add purified water up to the UPPER LEVEL (maximum) line.

Tire

Inspection of Tires

1. Check the pneumatic pressure of the tires.
2. Make sure that there are no cracks, damage or abnormal wear.

<table>
<thead>
<tr>
<th>Tire size</th>
<th>Pneumatic pressure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Front wheel</td>
<td>20 x 12.00 - 10</td>
</tr>
<tr>
<td>Rear wheel</td>
<td>20 x 8.00 - 10</td>
</tr>
</tbody>
</table>
Brake

Inspection of Brake

While traveling, depress the brake pedal firmly to make sure that the brake is applied effectively.

Inspection of Parking Brake

1. Depress the brake pedal and pull the parking brake lever to check that the parking brake is applied effectively.
2. Make sure that the brake is not applied even slightly after you depress the brake pedal to release the parking brake lever.

Wire

Inspection of Wire

1. Make sure that the wire is not cracked or damaged.
2. If the wire is cracked or damaged, replace it with a new one immediately.

Around The Engine

Inspection of Engine-Associated Parts

1. Check the fuel system parts for loosened or cracked joints and leakage. Replace the parts if necessary.
2. Blow compressed air to clean any grass or flammable materials that may be attached on or around the muffler.

Engine Oil

Inspection of Engine Oil

1. Stop the engine, wait for 10 to 20 minutes for the engine to cool down, and then check the oil level.
2. Position the machine so that the engine is level, and then fully insert the oil level gauge to check the oil level.

CAUTION

If you have removed the cover during inspection, make sure that you replace it in the original position securely.
If the cover remains removed, the operator may come in contact with the rotating objects or belt, possibly resulting in injuries.

Important

A slacking or damaged belt or damaged fan may cause overheating or lack of a battery charge.
3. The appropriate oil level should be between the upper and lower limit lines on the gauge.

![Oil Level Gauge Diagram]

### Supply of Engine Oil

**Important**

Do not supply too much engine oil. Otherwise, the engine may be damaged.

**Important**

Do not mix different types of engine oil.

**Important**

Be sure to use engine oil that is classified as API Service Grade CF or higher, with an SAE Viscosity that is appropriate for the operating environment (ambient temperature).

**Important**

Securely tighten the oil level gauge and oil filler cap.

1. Engine oil is supplied through the oil filler cap.
   - Remove the oil filler cap, and then supply new engine oil until the oil reaches a level in between the upper and lower limit lines on the oil level gauge.

2. Securely install the oil filler cap.

3. It will take a while for the supplied engine oil to descend into the oil pan. Check the oil level again 10 to 20 minutes after supplying the oil.

### Fuel

**Inspection of Fuel Quantity**

With the machine on a level surface, observe the fuel gauge in the meter panel to check the fuel level.

![Fuel Gauge Diagram]
Supply of Fuel

⚠️ Warning
Do not supply fuel above F (FULL) level of the fuel gauge.
If you supply too much fuel, it might overflow from the cap when you travel or work on a slope.

⚠️ Warning
Keep away from fire while refueling.
Do not smoke while refueling.

If the fuel gauge in the meter panel indicates a level close to E (EMPTY), supply fuel (diesel) at your earliest convenience.
The fuel tank capacity is approximately 25.0 dm³ (25.0 L).

Water Separator

Inspection of Water Separator

⚠️ Important
Water-contaminated fuel may impair engine startability, decrease output or damage engine parts.

The water separator removes water from the fuel.
1. Make sure that debris and water have not accumulated in the cup.
   With the float raised, water contamination is confirmed.
   When the float reaches the drain level, drain the water.

Draining of Water Separator

⚠️ Important
Water-contaminated fuel may impair engine startability, decrease output or damage engine parts.

Drain water from the water separator according to the maintenance schedule.
And drain water whenever the float is raised by water.
1. Stop the engine, and then turn the key switch to the "OFF" position.
2. Place a container under the water separator.
3. Close the fuel cock of the fuel filter.
4. Close the fuel cock of the water separator.
5. Remove the ring nut, and then remove the cup.

6. Drain the water from the cup.

7. Correctly install all parts in their original positions.

8. Fill up the fuel tank with fuel, and then open the fuel cock of the fuel filter.

9. Open the fuel cock of the water separator.

10. Loosen the air-bleed plug to bleed the air.

11. When the cup is filled with fuel, close the air-bleed plug.

12. If the engine does not start within 15 seconds after switching the ignition key to the "START" position, wait at least 30 seconds, and then repeat the same operation.

   If there is still air in the cup after starting the engine, bleed the air again.

Cleaning of Water Separator

**Important**

Water-contaminated fuel may impair engine startability, decrease output or damage engine parts.

Clean the water separator according to the maintenance schedule.

And clean it whenever debris has accumulated in the cup.

1. Stop the engine, and then turn the key switch to the "OFF" position.

2. Place a container under the water separator.

3. Close the fuel cock of the fuel filter.

4. Close the fuel cock of the water separator.
5. Remove the ring nut, and then remove the cup.

6. Drain the water from the cup.
7. Clean the cup and element with diesel fuel.

8. Correctly install all parts in their original positions.
9. Fill up the fuel tank with fuel, and then open the fuel cock of the fuel filter.
10. Open the fuel cock of the water separator.

12. When the cup is filled with fuel, close the air-bleed plug.
13. If the engine does not start within 15 seconds after switching the ignition key to the "START" position, wait at least 30 seconds, and then repeat the same operation.
   If there is still air in the cup after starting the engine, bleed the air again.

**Fuel Filter**

**Inspection of Fuel Filter**

The fuel filter works to remove foreign objects mixed into the fuel.

- When the fuel flow becomes insufficient, replace the fuel filter if necessary.
- Make sure that there is no fuel leakage.
- Make sure that the fuel filter is not damaged or dirty.

**Oil Leakage**

**Inspection of Oil Leakage**

- Make sure that there is no wear or deterioration of the grass catcher.
- Make sure that there is no damage to the grass catcher.
- Make sure that there is no interference to moving parts due to deformation of the grass catcher.

---

**Important**

During installation, prevent contamination with dirt or dust.
If the fuel is contaminated with dirt or dust etc., the fuel injection pump and injection nozzle will become worn.

---

**Caution**

When performing maintenance on the hydraulic system, lower the mower units.

---

After approximately 50 hours of operation, some tightened portions may be loosened and oil and grease may leak.
Be sure to retighten the parts.
Check the bottom of the machine for oil and grease leakage.
Tightening Torques

Important
Refer to the Tightening Torque table. Note that the Baroness product warranty may not apply to defects caused by incorrect or overtorque tightening, etc.

Standard Tightening Torques
Bolts and Nuts

Important
A number of bolts are used in each part of this machine. Be sure to re-tighten the bolts and nuts, because they may be loosened at the earlier stage of the use.

As to the bolts and nuts without any special instruction, tighten them in appropriate tightening torque with proper tool.
Too much tightening may cause the looseness or damage of the screw.
The strength of tightening is determined by types of screws, strength, the friction of thread face or base face and others.
The table below is for the galvanized or parkerized bolts.
In case that the strength of internal thread is weak, it is not applied.
Do not use rusty or sand attached "screw."
Otherwise, it may cause insufficient tightening even if you apply the specified tightening torque.
The friction of the screw face becomes higher and the tightening torque is canceled out by the friction, therefore sufficient tightening cannot be applied.
If "screw" is wet by water or oil, do not tighten it with normal tightening torque.
If the screw is wet, the torque coefficient will get smaller and it may result in too much tightening.
Too much tightening may cause looseness by the screw stretched or result in damage.
Do not use a bolt experienced too much burden.
Using the impact wrench requires the skill.
Do exercise as much as possible for steady tightening.

**Note:**
The same values are applied to "fine screw thread."
**Principal Tightening Torques**

Tightening Torque by Model

**LM331**

Tighten the following bolts and nuts at the torque specified in the table.

For thread locking adhesive, apply a middle strength thread locker (ThreeBond 1322 or equivalent anaerobic sealant).

**Handling Instructions**

Page 4-14

Tightening Torques
Adjustment before Work

Adjustment of Steering Wheel

**Warning**
Do not make adjustments while traveling since doing so is dangerous.

**Caution**
Be sure the steering wheel position is securely locked. It may result in an unexpected accident if it becomes loose while traveling.

The steering wheel can be adjusted up or down. Adjust the position to fit the operator. Shift the tilt lever to the "FREE" position, move the steering wheel to the position that suits the work requirements, and then shift the tilt lever to the "LOCK" position to secure the steering wheel in place. The tilt lever is located at the left in front of the driver’s seat.

Adjustment of Seat

Use the seat adjustment levers to adjust the seat. Adjust the position to fit the operator.

1. Use the forward/backward adjustment lever to adjust the seat back and forth.
2. Use the backrest tilt adjustment lever to adjust the angle of the backrest.
Adjustment of Mower Stopper Pin

Note:
Depending on the specifications, this function may not be available.
The mower stopper pin can prevent or allow tilting of the mower units.
Adjust according to the operating conditions.
Fixed:
- The mowing line while traveling straight ahead is a straight line. (The mowing line is easy to see.)
- The mower units do not tilt while operating on slopes, and incomplete mowing can be reduced.
Released:
- It is appropriate when turning while mowing or it is easy to follow undulations.

1. With the machine on a level surface, lower all mower units.
2. Apply the parking brake, and then stop the engine.
3. Adjust the position of the mower stopper pin, and then insert the cotter pin.

To fix:
Insert the cotter pin into the upper hole in the mower stopper pin.

To release:
Insert the cotter pin into the lower hole in the mower stopper pin.

Adjustment of Mower Stabilizer (LH Unit)

Note:
Depending on the specifications, this function may not be available.

Important
After adjusting the cutting height, adjust the mower stabilizer.

The mower stabilizer stabilizes the mower units and prevents an undulating finish (a phenomenon called Marcelling).
1. Lower all mower units on a level place.
2. Apply the parking brake, and then stop the engine.
3. Loosen the lock nut.
4. Tighten the nut to adjust the length of the spring (compression).
   • Mower #2 and #3: 140.0 mm (5.51 in)
   • Mower #1: 60.0 mm (2.36 in)
5. Tighten the lock nut.

Procedure to Start/Stop Engine

Start/Stop of Engine

Caution
Before starting the engine, make sure that there are no other people or obstacles around the machine.

Caution
Starter operation must take 15 seconds or less.
If the engine still does not start, stop using the battery for 30 to 60 seconds to avoid exhausting the battery.

1. Open the fuel cock of the water separator.
2. Open the fuel filter cock.
3. Sit on the seat.
4. Make sure that you have depressed the brake pedal and applied the parking brake.
5. Set the reel rotation switch to the “Stop” position.
6. Move the mower unit up/down lever to the neutral position.
7. Make sure that the traveling pedal is in the neutral position.
8. Shift the throttle lever from the "Low speed" position halfway to the "High speed" position.

**Important**
The thermo-start lamp turns off at the specified time. However, the lamp turning off is not related to the glow plug generating heat. If the ignition key is left in the "GLOW" position after the lamp is turned off, the plug will still generate heat. The thermo-start lamp will stay illuminated for five seconds.

9. Switch the ignition key to the "GLOW" position.

10. Make sure that the glow plug is generating heat and the thermo-start lamp is turned on.

11. After the thermo-start lamp turns off, immediately set the ignition key to the "START" position.

12. When the starter starts rotating and the engine starts, slowly return the ignition key to the "ON" position.

13. Make sure that the charge lamp and oil pressure lamp turn off. If they do not turn off, stop the engine and inspect the machine.

14. Shift the throttle lever to the "Low speed" position, and then warm up the engine for 1-2 minutes.

15. Gradually move the throttle lever to the "High speed" position.

**Procedure to Stop Engine**

1. Set the traveling pedal to the neutral position.
2. Depress the brake pedal, and then apply the parking brake lever.
3. Set the reel rotation switch to the "Stop" position.
4. Shift the throttle lever toward the "Low speed" position, and then let the engine idle for 1 to 2 minutes.
5. Switch the ignition key to the "OFF" position.
6. Make sure that the engine has stopped.
7. Remove the ignition key.
8. Leave the driver's seat.
9. Close the fuel cock of the water separator.
Safety Mechanisms

This machine features a safety device for starting/stopping the engine.

1. As for starting the engine, the safety device prevents the engine from starting unless it meets each of the following four conditions.
   - An operator is sitting on the seat.
   - The parking brake is applied.
   - The reel rotation switch is set to the "OFF" position.
   - The traveling pedal is set to the neutral position.

Important

When you restart the engine after the safety device stops the engine, be sure to return the ignition key to the "OFF" position first, and then restart it.

2. In the event the operator leaves the seat with the parking brake applied and the engine running, the safety device will be activated and will stop the engine under any of the following conditions:
   - The traveling pedal is not set to the neutral position. (The operator has depressed the traveling pedal.)
   - The reel rotation switch is set to the "Rotate" position.

However, when the reel reverse switch is set to the "ON" position (reverse rotation), the engine does not stop.

Warning Mechanisms

This machine features a warning mechanism for overheating.

1. If water temperature inside the engine exceeds 105 degrees Celsius, a buzzer will sound. (intermittent tone)

Caution for when You Leave The Machine

Caution

If the brakes are not sufficiently effective, use the wheel stoppers to secure the machine.

This shows how to lock and release the parking brake.

BRAKE Decal
K4203001450
Decal, BRAKE
This indicates brake.

FORWARD Decal
K4203001430
Decal, FORWARD
This indicates forward travel.

BACKWARD Decal
K4203001440
Decal, BACKWARD
This indicates backward travel.
Lapping switch decal

LM331-0556Z0
Lapping switch decal
This indicates the ON/OFF positions for back lapping.

Reel Stop Decal

K4203001310
Decal, reel stop
This indicates stop of the reel cutter (cutting cylinder).

Reel Rotation Decal

K4203001300
Decal, reel rotation
This indicates rotation of the reel cutter (cutting cylinder).

Proximity Sensor

There is a proximity sensor on #2 mower arm fulcrum. This sensor detects the raised or lowered positions of mower unit #2. The information is related to controlling rotation and stop of the reel cutter (cutting cylinder).
2WD/3WD Selector Lever

**Caution**
Since traveling on steep downward slopes, wet surfaces and wet grassy downward slopes in 3WD is dangerous, use 2WD. Otherwise, the rear tire may slip and travel control may be lost.

**Important**
Before switching between 2WD and 3WD operation, make sure that the machine is completely stopped. Otherwise, the hydraulic equipments will malfunction.

The 2WD/3WD selector lever is located to the left of the driver's seat.
When the lever is shifted forward, 3WD mode is selected. When the lever is shifted backward, 2WD mode is selected.

Light Switch

**Caution**
The lights provide auxiliary lighting. Do not travel or operate the machine at night or under poor visibility.

**Note:**
Depending on the specifications, this function may not be available.
The light switch is located in the meter panel. When the switch is set to the "ON" position, the lights turn on. When it is set to the "OFF" position, the lights turn off.

The throttle lever is located in the meter panel and enables you to adjust the engine rpm. Move the throttle lever toward the "High speed" position to increase the engine rpm, and toward the "Low speed" position to reduce the rpm.
**Mower Unit Up/Down Lever**

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Before raising or lowering the mower units, be sure to sit on the seat.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Before raising or lowering the mower units, make sure that there are no people around the machine.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Be careful since shifting the mower unit up/down lever to the &quot;DOWN&quot; position lowers the mowers, even while the engine is stopped.</td>
</tr>
</tbody>
</table>

The mower unit up/down lever is located in the operation panel (to the right of the driver's seat) and raises or lowers the mower units. Shift the lever to the "DOWN" position to lower the mower units, and shift it to the "UP" position to raise the mower units.

---

**Reel Rotation Switch**

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Set the reel rotation switch to the “Rotation” position immediately before starting cutting work. At all other times, be sure to leave the reel rotation switch set to the &quot;Stop&quot; position.</td>
</tr>
</tbody>
</table>

The reel rotation switch is located in the operation panel (to the right of the driver's seat) and operates rotation of the reel cutters (cutting cylinders) of the mower units. When the reel rotation switch is set to the "Rotation" position, the reel cutters (cutting cylinders) of all mower units will rotate for cutting work. When the reel rotation switch is set to the "Stop" position, the reel cutters (cutting cylinders) will stop.

---

**Table:**

<table>
<thead>
<tr>
<th>1</th>
<th>Reel rotation switch</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Rotation</td>
</tr>
<tr>
<td>B</td>
<td>Stop</td>
</tr>
</tbody>
</table>

Note:
Even if the reel rotation switch is set to the "Rotation" position, the reel cutter (cutting cylinder) stops rotating when the mower units are raised.
Reel Reverse Switch

**Important**

Do not switch the reel reverse switch to the "ON" or "OFF" position while the reel cutter (cutting cylinder) is rotating. Otherwise, a hydraulic system malfunction will occur.

**Important**

If the reel rotation switch is not set to the "Rotation" position, the reel cutter (cutting cylinder) will not rotate.

The reel reverse switch is located under the hood. This switches the rotation direction of the reel cutter (cutting cylinder). When the reel reverse switch is set to the "ON" position, the reel cutters (cutting cylinders) of all mower units rotate in reverse (back lapping rotation). When the reel reverse switch is set to the "OFF" position, the reel cutters (cutting cylinders) rotate normally.

Reel Rotation/Stop Switching Lever

**Caution**

Before operating the reel rotation/stop switching lever, be sure to set the reel rotation switch to the "Stop" position.

The reel rotation/stop switching lever is located on the reel motor attached to each mower unit. It is used during cutting and back lapping. Shift the lever(s) to the "Rotation" position only for the mower unit(s) to be used for cutting or back lapping. Leave the lever(s) for other mower units in the "Stop" position.
Traveling Pedal

The traveling pedal is located in the right foot area. When the forward end is depressed, the machine travels forward. When the backward end is depressed, the machine travels backward.

Brake Pedal

The brake pedal is located in the left foot area. To stop the machine, firmly depress the brake pedal.

Parking Brake Lever

**Caution**

Never park the machine on a slope.

**Important**

Be sure to release the parking brake before driving. Otherwise, the brakes or hydraulic system will malfunction.

The parking brake lever is located under the left side of the meter panel. To park the machine, depress the brake pedal and pull the parking brake lever completely. To release the parking brake, depress the brake pedal again.
Hood

**Caution**
Do not open the hood in strong winds.

**Caution**
Be careful not to pinch your fingers when you open or close the hood.

**Important**
Before opening the hood, be sure to lower the mower units. In addition, do not raise the mower units while the hood is open. Otherwise, the hood will be damaged.

1. Loosen the lock bolt for the hood.

2. Release the rubber catches on the left and right sides.

3. Lift up the hood.

4. Close the hood slowly.
5. Hook the rubber catches without fail.
6. Tighten the lock bolt for the hood.

Rear Cover

**Caution**
Do not remove the rear cover in strong winds.

**Caution**
Be careful not to pinch your fingers when removing or installing the rear cover.

1. Remove the bolts on the rear cover. Left and right mounting bolts (one each)
Bring the seat to the very front position.
If the ROPS or the ball proof net is installed, follow the steps below to fold back the ROPS.

1. Remove the clip pins on the left and right sides of the ROPS, and then remove the lock pins.

2. Fold back the ROPS.

4. Pull up the rear cover to remove it.

Center Cover

1. Bring the seat to the backmost position.
2. Completely raise the steering wheel.
3. Remove the bolt on each side of the center cover.

4. Remove the center cover.
Battery Cutoff Switch

Important

After disconnecting, switch the ignition key to the "ON" position and check that the charge lamp and oil pressure lamp do not turn on.

The battery cutoff switch is located on top of the battery (behind the driver's seat, on the left). This switch connects and disconnects the negative battery cable. When the knob is tightened to set the switch to the "ON" position, the negative battery cable is connected. When knob is loosened to set the switch to the "OFF" position, the negative battery cable is disconnected.

Water Temperature Gauge

The water temperature gauge is located in the meter panel. This instrument indicates the water temperature inside the engine. If the water temperature gauge indicates a level close to "H" during operation, the machine is overheated. Remove the load from the engine, idle the machine for five minutes, stop the engine, and then inspect the machine and perform any necessary maintenance. If the water temperature exceeds 105 degrees Celsius, a buzzer will sound. (intermittent tone)

Instruments

Instruments in the Meter Panel
Fuel Gauge

The fuel gauge is located in the meter panel. This instrument indicates the quantity of fuel inside the fuel tank.

![Fuel Gauge](image)

Pilot Lamps

Charge Lamp

The charge lamp is the left pilot lamp, located in the meter panel. This lamp turns on when the ignition key is set to the "ON" position before the engine starts. It turns off when the engine starts and the alternator starts operating properly. If this lamp illuminates while you are operating the machine, stop the engine immediately, and then inspect the machine and perform any necessary maintenance.

![Charge Lamp](image)

Thermo-start Lamp

The thermo-start lamp is the middle pilot lamp, located in the meter panel. When the ignition key is set to the "GLOW" position, this lamp turns on while the glow plug generates heat. Illumination of the thermo-start lamp is controlled by the glow lamp timer, and the lamp is turned off after a specified amount of time passes. The duration of illumination indicates an approximate period of time required for warm-up, and has been fixed at five seconds.

![Thermo-start Lamp](image)

Oil Pressure Lamp

The oil pressure lamp is the right pilot lamp, located in the meter panel. This lamp turns on when the ignition key is set to the "ON" position before the engine starts. It turns off when the engine starts and engine oil pressure is generated properly. If this lamp illuminates while you are operating the machine, stop the engine immediately, and then inspect the machine and perform any necessary maintenance.

![Oil Pressure Lamp](image)
Overheat Warning Buzzer

If the water temperature inside the engine exceeds 105 degrees Celsius, a buzzer will sound. (intermittent tone)
Remove the load from the engine, idle the machine for five minutes, stop the engine, and then inspect the machine and perform any necessary maintenance.

Hour Meter

The hour meter indicates the accumulated operation time of the engine.
The number in red figures on a white background is incremented every thirty-six seconds.
The number in white figures on a black background is incremented every hour.
1/100 wheel … red figures on a white background
Hour wheel … white figures on a black background

Move

Traveling Procedure

Caution
Under any circumstances drive the machine at such a speed that you can stop it immediately for emergencies.

Caution
Since traveling on steep downward slopes, wet surfaces and wet grassy downward slopes in 3WD is dangerous, use 2WD. Otherwise, the rear tires may slip and travel control may be lost.

Important
Do NOT start to move or stop the machine abruptly.
It will damage the hydraulic system or result in oil leakage.

1. Start the engine.
"Procedure to Start Engine" (Page 4-17)
2. Raise all mower units.
3. Depress the brake pedal to release the parking brake.
4. Release the brake pedal.
5. Slowly depress the traveling pedal.
6. The machine starts traveling.
7. The machine stops with the traveling pedal released and the brake pedal depressed.
Towing The Machine

If the machine does not travel due to engine trouble, etc., you can move it in the following ways:
- Pushing by hand
- Towing (See the following procedure.)

**Caution**
Before towing, check that the brake is applied effectively.

**Important**
- Before starting the engine, be sure to close the unload valves.
- Do not touch the unload valve except when towing the machine.
- When towing the machine, travel at a speed no more than 3.0 km/h. In addition, do not tow the machine for more than 3 minutes. If the towing speed is too fast or there is excessive movement, the pump or motor will be damaged.

The unload valves are located under the floor panel.

4. Secure the machine with ropes.
   Front side
   - Stop the engine.
   - Apply the parking brake.
   - Chock the wheels.

4. Secure the machine with ropes.
   Front side

5. Set the 2WD/3WD selector lever to the "2WD" position.
   - Loose the lock nut on each of the two unload valves.
   - Tighten the two bolts to compress the unload valve operating pins and open the unload valves.

6. Loosen the lock nut on each of the two unload valves.
7. Tighten the two bolts to compress the unload valve operating pins and open the unload valves.
While towing, always keep your foot on the brake pedal and depress the brake pedal at any time to stop.

Cutting Work

Cutting work must be performed at an appropriate speed for the site and location. When cutting over bumpy surfaces, keep the engine rpm steady, and slow down the cutting speed.

Reel rotation will be turned on or off based on the sensor-detected position of the mower units. Please note that if you stop operating the mower unit up/down lever before the mower units are raised completely, reel rotation may not stop.

Mow with the lever shifted to the "DOWN" position. When the lever is returned to the neutral position, the cylinders are fixed, preventing mowing on undulations.

1. Shift the reel rotation/stop switching levers of all mower units to the "Rotation" position.
2. Start the engine. "Procedure to Start Engine" (Page 4-17)
3. Depress the brake pedal to release the parking brake.
4. Shift the throttle lever to the "High speed" position to run the engine at the maximum speed.
5. Shift the mower unit up/down lever to the "DOWN" position to lower the mower units.
6. Set the reel rotation switch to the "Rotation" position to rotate the reel cutters (cutting cylinders) of all mower units.
7. Depress the traveling pedal to start cutting work.

Do NOT start to move or stop the machine abruptly. It will damage the hydraulic system or result in oil leakage.

8. Remove the wheel stoppers.
9. Depress the brake pedal to release the parking brake.

10. Tow the machine slowly.
Removal/Installation of Grass Catcher

**Caution**
Stop the engine before removing or installing the grass catcher.

1. Set the reel rotation switch to the "Stop" position.
2. Lower the mower units.
3. Apply the parking brake.
4. Stop the engine.
5. Remove or install the grass catcher.
   - **Removal of grass catcher:**
     Lift up the grass catcher, and remove the mounting pins on the left and right of the grass catcher from the grass catcher mounting brackets.
   - **Installation of grass catcher:**
     Install the mounting pins on the left and right sides of the grass catcher into the grass catcher mounting brackets.

Mower unit #1

**Transporting**

**Transporting Procedure**
When loading the machine into a trailer or a truck to transport it, drive the machine forward. When unloading, drive the machine in reverse.

**Storage**

**Before Long-Term Storage**
- Completely remove dirt, grass clippings, debris, oil stains, etc.
- Supply oil and apply grease to appropriate parts.
- Loosen the battery cutoff switch to disconnect the negative battery cable. Switch the ignition key to the "ON" position and check that the charge lamp and oil pressure lamp do not turn on.

Maintenance Precautions

**Caution**
First, learn well the maintenance operations you plan to perform.

**Important**
Use tools appropriate for each maintenance operation.

**Important**
For the safe and best performance of your machine, use Baroness genuine parts for replacement and accessories. Please note that our product warranty may be void if you use non-genuine parts for replacement or accessories.
### Maintenance Schedule

Follow the maintenance schedule below.

- ○ Inspect, adjust, supply, clean
- ● Replace (first time)
- △ Replace

- *1: Consult your local Baroness Dealer or local KUBOTA Dealer for this service.
- The items above (*2 marked) are registered as emission related critical parts by KUBOTA in the U.S. EPA nonroad emission regulation.

As the engine owner, you are responsible for the performance of the required maintenance on the engine according to the above instruction. Please see the Engine's Warranty Statement in detail.

- *4: Refer to the Battery's Owner's Manual.
- The values for consumables are not guaranteed.
- Replace the steering cylinder hoses every 2 years.

### Adjusted Value

### Warning

When replacing a tire or beginning any other maintenance or repairs, be sure to chock the wheels to prevent the machine from moving. Before jacking up the machine, park it on a hard, flat surface such as a concrete floor and remove any obstacles that could prevent you from performing the work safely.

When necessary, use an appropriate chain block, hoist, or jack.

Support the machine securely with jack stands or appropriate blocks.

Failure to do so may cause the machine to move or fall, resulting in injury or death.

### Important

Only place a jack under the jack-up points specified. Placing a jack at any other point will result in damage to the frame or other parts.

Use the jack-up points identified in this manual when jacking up the machine.

Greasing

About Greasing

Since there may be adhesion or damage due to lack of grease on moving parts, they must be greased. Add urea-based No. 2 grease in accordance with the Maintenance Schedule. Other locations where the specified grease or lubricant is used are indicated in "Greasing Points". Add grease using the specified grease or lubricant.

Greasing Points

Grease nipples are installed in the following locations.

Add grease every 50 hours of operation. However, for locations where a time is specified, add grease according to that schedule.

<table>
<thead>
<tr>
<th>Location</th>
<th>No. of greasing points</th>

   Left side

11. Mower lift cam lever
12. Mower coupling
   Mower unit #2 and #3
   There is one greasing point each on the couplings connecting the mower units.

---

**Lubrication**

**About Lubrication**

It is necessary to lubricate moving parts so that they will not become stuck or damaged. The locations where lubricant is used are indicated in "Lubricating Points". Apply the lubricant.
Lubricating Points

Apply lubricant at the following locations every 50 hours of operation.

<table>
<thead>
<tr>
<th>Location</th>
<th>No. of greasing points</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 Steering cylinder spherical bearing</td>

2. Front mower cylinder spherical bearing
   There are two locations.

3. Rear mower cylinder spherical bearing
   There is one location.
Maintenance Work

Removing/Installing Tires

Front Tires

Follow the steps below to remove the front tires:

1. Loosen the bolts.

2. Securely place the jack beneath the jack-up point of the front left/right frame area, and then raise it until the tire lifts off the ground. "Jack-up Points" (Page 5-7)

3. Remove the bolts.

4. Remove the tire from the wheel mounting seat.

**Important**

Tighten the bolts in the tightening order (diagonally).

For installing the front tires, reverse the removing procedure.

Rear Tires

Follow the steps below to remove the rear tires

1. Loosen the bolts.

2. Securely place the jack beneath the jack-up point of the rear frame area, and then raise it until the tire lifts off the ground. "Jack-up Points" (Page 5-7)

3. Remove the bolts.

4. Remove the tire from the wheel mounting base.

**Important**

Tighten the bolts in the tightening order (crosswise).

For installing the rear tires, reverse the removing procedure.
Adjustment of Belt Tension

**Warning**
Be sure to stop the engine before adjusting the belts.

**Important**
Before making sure of belt tension, rotate the belt several times.

If the belt becomes slack due to frequent use, it may jump or slip. In addition, if it is overtightened, it may wear prematurely. If necessary, adjust it, and always check the belt for appropriate tension.

**Fan Belt**

1. Press the middle of the belt with your finger to check the belt tension. The belt tension is appropriate when the belt slacks by approximately 10.0 mm (0.39 in) when you apply a force of 98 N (10 kgf) to the belt at the middle point between the pulleys.
2. If the belt tension is incorrect, loosen bolt A and bolt B (securing the alternator), and then move the alternator to adjust the tension.

---

**Hydraulic Pump Drive Belt**

1. Open the hood.

2. Loosen the lock nut, and then turn the nut to adjust the length of the spring to 35.0 mm (1.38 in).

3. Secure with the lock nut.

---

Adjustment of Parking Brake

**Caution**
Make sure that the brake wire is not cracked or damaged.

**Important**
Make sure that the brake is effective on slopes and that it is not applied any longer when you release it. Adjust the parking brake system whenever there is any abnormality.

1. Stop the engine.
2. Follow the steps below to adjust the parking brake.
   [1] Depress the brake pedal firmly, and then pull the parking brake lever to engage the latch on the notch.

![Adjustment of Parking Brake_001](ulabms-012)

[2] Make adjustment with the adjustment bolt so as to locate position of the latch at 3 to 4 notches from the bottom.

![Adjustment of Parking Brake_002](nfzln9-007)

<p>| | |</p>
<table>
<thead>
<tr>

<tbody>
<tr>
<td>1</td>
<td>Brake wire</td>
</tr>
<tr>
<td>2</td>
<td>Adjustment bolt</td>
</tr>
<tr>
<td>3</td>
<td>Brake lever</td>
</tr>
</tbody>
</table>
Adjustment of Brake

**Caution**
If the brake wire becomes broken, the machine will be unable to stop.
If there are cracks, damage or other defects, replace it immediately.
Adjust the brake wire if the brakes become less effective.

**Important**
Adjust the brake wire so that there is minimal play with the brake lever, and so that the brakes do not drag when the brake is released.

1. Adjust the foot brake by tightening the adjustment bolt on the brake wire.
   - Braking force will decrease if there is more play with the brake lever, and the brake pedal will feel lighter.
   - Reducing play with the brake lever will increase braking force and make the brake pedal feel heavier.

2. Start the engine and drive to check the following.
   - Make sure that heat is not generated in the brake area.
   - Make sure that the left and right brakes are equally effective.

3. If the left and right brakes are not equally effective, make fine adjustments with the adjustment bolt on the brake wire.

Break-In of Brakes

If the brake shoes or brake pads are worn, replace them with new ones.
Immediately after replacement, drive to break in the brakes if the effectiveness of the brakes is low.
While driving, lightly operate the brakes to break in the contact areas.

Adjusting the Neutral Position of the Piston Pump

**Caution**
Make sure not to touch rotating tires.

**Caution**
Be careful not to touch the muffler.

**Caution**
When adjusting the neutral position, pay close attention to abrupt start of the machine.
Place the jacks beneath the jack-up points, and then lift the machine until all the tires get off the ground.

**Important**
Make sure that there is no abnormality in the bearings of the trunnion lever. If there is an abnormality, perform a replacement before the following operation.

If the machine moves forward or backward while the traveling pedals are released, they are not set to the neutral position.
Follow the steps below to make adjustments.
1. Stop the engine.
2. Place the jacks beneath the jack-up points, and then lift the machine off the ground.
Use stable jack stands, and raise the machine until the tires lift off the ground.
"Jack-up Points" (Page 5-7)
3. Make sure that no tires get contact with the jack stand.
4. Open the hood.
5. Make sure that the length of the spring of the lever adjuster is 53.0 mm (2.09 in). Loosen the lock nut as necessary to make adjustment.

6. Adjust the neutral position. Follow these steps to adjust the neutral position.
   · When the tire moves in the direction of forward travel, slide the cam lever in direction A.
   · When the tire moves in the direction of backward travel, slide the cam lever in direction B.

   [1] Make sure that the engine has stopped.
   [2] Turn the cam lever shaft bolt counterclockwise 60 ° or up to 120 ° to loosen it.
   [3] Tap the cam lever fulcrum (pipe portion) with a plastic hammer in the direction of black arrow to slide the cam lever in the direction A or B.
   [4] Tighten the cam lever shaft bolt.

7. Start the engine, and rev it up to the maximum rpm.
8. Set the 2WD/3WD selector lever to the "2WD" position.
9. Check that the tires do not move. If a tire moves even slightly, stop the engine, and then repeat steps 6. to 9.
Change of Coolant

⚠️ Caution
Do not touch the radiator or coolant during engine operation or immediately after the engine has been turned off. Otherwise, you may get burned due to high temperatures.

⚠️ Caution
Change coolant after the engine has well cooled down.

⚠️ Caution
The radiator cap is pressurized. If you remove the radiator cap while the engine is overheated, hot steam will burst out, possibly resulting in burns. Make sure that the water temperature and pressure are reduced, and then grab the cap with a thick cloth and gradually open the cap.

Important
When changing the coolant, be sure to drain it into a container and discard it in accordance with local laws and regulations.

Important
When changing the coolant, be sure to mix clean water and antifreeze (long-life coolant), and then pour it into the radiator and reserve tank.

Important
Tightly close the radiator cap. If the cap is loose or incorrectly installed, water may leak and the engine may overheat.

When mixing antifreeze and clean water, refer to "Relationship between concentration of long-life coolant (LLC) and freezing temperature" below for the mixing ratio.

Relationship between concentration of long-life coolant (LLC) and freezing temperature

<table>
<thead>
<tr>
<th>Freezing temperature</th>
<th>LLC concentration (volume %)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Down to -10 °C (14 °F)</td>
<td>20 %</td>
</tr>
<tr>
<td>Down to -15 °C (5 °F)</td>
<td>30 %</td>
</tr>
<tr>
<td>Down to -20 °C (-4 °F)</td>
<td>35 %</td>
</tr>
<tr>
<td>Down to -25 °C (-13 °F)</td>
<td>40 %</td>
</tr>
</tbody>
</table>

1. Stop the engine, and then allow the radiator to cool.
2. Open the hood.
3. Follow the steps below to drain the coolant.
   [1] Position a container to drain the coolant into.
   [2] Remove the drain plug from the radiator.

When mixing antifreeze and clean water, refer to "Relationship between concentration of long-life coolant (LLC) and freezing temperature" below for the mixing ratio.

[5] Open the reserve tank cap, and then drain the coolant.
4. Install the reserve tank.
5. Clean the radiator with clean water to remove any debris or rust.
6. Drain all water from the radiator.
7. Follow the steps below to fill with coolant.
   The coolant quantity, including the reserve tank, is 3.1 dm³ (3.1 L).
   1. Install the drain plug.
   2. Supply clean water and antifreeze into the radiator up to the radiator cap opening.
   3. Close the radiator cap.
   4. Supply clean water and antifreeze into the reserve tank up to the "FULL" mark.
   5. Close the reserve tank cap.
8. Start the engine, and then idle for several minutes to bleed air from the system.
9. Stop the engine, and then allow the radiator to cool.
10. Check if the coolant level in the reserve tank is between "FULL" and "LOW", and then supply coolant if necessary.
11. Close the hood.

---

**Change of Hydraulic Oil**

**Caution**

Be careful with hot oil, which could cause burns if it contacts your skin.

**Important**

When you change the hydraulic oil, be sure to drain it into a bowl and discard it in accordance with local laws and regulations.

**Important**

If the hydraulic oil emulsifies or if it becomes even slightly less transparent, change the oil immediately.

**Important**

Use Shell Tellus S2M46 (or equivalent) as hydraulic oil.

1. Follow the steps below to remove the old oil.
   1. Start and run the engine to warm up the oil.
   2. On a level surface, lower the mower units, and then stop the engine.
   3. Remove the drain plug of the hydraulic tank and drain the old oil into a bowl.
   4. Wind new sealing tape on the drain plug, and then install the drain plug into the hydraulic tank.

2. Remove the rear cover.
3. Follow the steps below to supply new hydraulic oil.
   The hydraulic tank capacity is approximately 26.0 dm³ (26.0 L).

[1] Open the tank cap, and then supply hydraulic oil through the oil filling port until the oil level reaches the middle of the oil gauge on the hydraulic tank.

4. Start the engine, raise and lower the mower units, and turn the steering wheel left and right. Move forward and reverse repeatedly several times.

5. Raise the mower units and maintain that position on a level surface, and then check to see if the oil level is at the middle of the oil gauge. If necessary, supply oil.

6. Check underneath the machine for hydraulic oil leakage.

7. Install the rear cover.

</tbody>
</table>
4. Lightly coat the O-ring of the new filter cartridge with hydraulic oil, and then install the cartridge.

5. Clean the inside of the filter case.

6. Make sure that there is no damage to the O-ring of the filter case, and then lightly coat the O-ring with hydraulic oil.

7. Install the filter case onto the body, firmly hand-tighten it, and then tighten it to 25 to 35 N·m (254.93 - 356.90 kgf).

8. Supply hydraulic oil until it reaches the specified level. "Hydraulic Oil Supply" (Page 4-4)

Change of Air Cleaner

A contaminated air cleaner element may cause malfunction of the engine. To maximize the life of the engine, replace the air cleaner element at the appropriate times.

1. The timing for replacing the air cleaner element is described below.
   [1] Replace the air cleaner element in accordance with the Maintenance Schedule.
   [2] If it is significantly contaminated, replace it, even if the hours of operation do not exceed the specified time.

2. Replace the air cleaner element by following the same steps as for cleaning the air cleaner. "Cleaning of Air Cleaner" (Page 4-5)
Change of Engine Oil

**Caution**
Be careful with hot oil, which could cause burns if it contacts your skin.

**Important**
When changing the engine oil, be sure to drain it into a container and discard it in accordance with local laws and regulations.

**Important**
Be sure to use engine oil that is classified as API Service Grade CF or higher, with an SAE Viscosity that is appropriate for the operating environment (ambient temperature).

**Important**
Securely tighten the oil level gauge and oil filler cap.

Change the engine oil more frequently if it is contaminated and especially if you use the machine in dusty areas or operate the engine at high loads or in high temperatures.

1. Follow the steps below to remove the old engine oil.
   1. Start and run the engine to warm up the engine oil.
   2. With the machine on a level surface, stop the engine.
   3. Remove the drain plug, and then drain the old engine oil into a container.

2. Remove the oil filler cap, and then supply new engine oil until the oil reaches a level in between the upper and lower limit lines on the oil level gauge.
   Engine oil quantity is approximately 3.7 dm³ (3.7 L).

3. Securely install the oil filler cap.

4. It will take a while for the supplied engine oil to descend into the oil pan.
   Check the oil level again 10 to 20 minutes after supplying the oil.

5. Check underneath the machine for oil leakage.

**Change of Engine Oil Filter**

**Caution**
Be careful with hot oil, which could cause burns if it contacts your skin.

**Important**
When replacing the engine oil filter, be sure to drain the engine oil into a container and discard it in accordance with local laws and regulations.

**Important**
Be sure to use engine oil that is classified as API Service Grade CF or higher, with an SAE Viscosity that is appropriate for the operating environment (ambient temperature).

**Important**
Securely tighten the oil level gauge and oil filler cap.

1. With the filter wrench, remove the old filter cartridge.
2. Lightly coat the packing of the new filter cartridge with engine oil.
3. Hand-tighten the filter cartridge until the packing contacts the sealing surface, and then firmly hand-tighten (without using a filter wrench).
4. Supply engine oil until it reaches the specified level. "Supply of Engine Oil" (Page 4-8)
5. Start the engine, and then stop it after 10 to 20 minutes.
6. Make sure that there is no oil leakage at the sealing surface of the filter cartridge.
7. Check the engine oil level. If it is low, supply engine oil until it reaches the specified level.

**Change of Fuel Filter Element**

If dust or dirt accumulates in the fuel filter, the fuel flow will become insufficient. Replace the fuel filter at the appropriate times. The fuel filter is on the left side under the rear right of the seat.

1. Close the fuel cock of the fuel filter.

2. Remove the ring nut, and then remove the cup.
3. Clean the inside of the filter cup with diesel fuel.

**Important**

During installation, prevent contamination with dirt or dust. If the fuel is contaminated with dirt or dust etc., the fuel injection pump and injection nozzle will become worn.

4. Install a new fuel filter element, and then correctly install all parts in their original positions.

5. Fill up the fuel tank with fuel, and then open the fuel cock.

**Important**

When performing maintenance on the electrical system, be sure to remove the negative battery wire.

**Important**

If a fuse blows, a short may have occurred within the electrical circuit. Check for the cause, such as faulty terminal connections, damaged wiring or terminals, or incorrect wiring.

**Important**

For fuse replacement, clean the fuse mounting area with use of compressed air before mounting the fuse.

**Note:**
Air bleeding is not required since it occurs automatically.

The machine uses a mini fuse for automobiles. Replace an old fuse with a new fuse of the specified capacity.
Fusible Link

Fuse capacities of the fusible links are 30 A and 50 A.

Engine stop solenoid: 30 A

Battery: 50 A

Name: Kyoeisha Co., Ltd.
Address: 1-26 Miyuki-cho, Toyokawa, Aichi-ken, Japan

Compiler of the technical file (2006/42/EC)

Name: Friedrich E. Barthels Nachf. Gloorckin KG (GmbH & Co.)
Address: Gerhard-Falk-Str. 1 21035 Hamburg Germany

Conformity assessment procedures

Internal production control: Module A (2006/42/EC)
EC-type examination: Module B (2014/30/EU)
Internal control of production with assessment of technical documentation and periodic checking (2000/14/EC)

Involved Notified Body (2000/14/EC)

Name: SNCH
Address: 11, Route de Sandweiler 5230 Sandweiler Luxembourg
Certificate / Technical Documentation No.: SNCH*2000/14*2005/88*3164*01/TCLM331-01

Place: Japan
Date: 6 January 2021 (6/01/2021)

Signature: [Signature]

Name: Akio Hayashi
Position: Quality Dept. Director

Déclaration de conformité UE

Identification du produit

Produit: Tondeuse à gazon
Fabricant: BARONESS
Type: LM331
Version(s): Non applicable
Numéro de série de début: 10103
Niveau de puissance acoustique mesuré: LWA 98.68 dB
Niveau de puissance acoustique garantie: LWA 103 dB
Fabricant: Kyoeisha Co., Ltd.
Adresse: 1-26, Miyuki-cho, Toyokawa, préfecture d'Aichi, Japon

Conforme aux directives suivantes:

2006/42/CE Machine (MD)
2014/30/UE Compatibilité électromagnétique (CEM)
2000/14/CE Émissions sonores de l'équipement de plein air

Conception et fabrication en respect des spécifications suivantes:

ISO 5395-1: 2013 (2006/42/CE)

Fiche technique

Marque: Kyoeisha Co., Ltd.
Adresse de la marque: 1-26, Miyuki-cho, Toyokawa, préfecture d'Aichi, Japon
Compteur de la fiche technique (2006/42/CE)
Nom: Friedrich E. Barthels Nachf. Gloorckin KG (GmbH & Co.)
Adresse: Gerhard-Falk-Str. 1 21035 Hamburg Allemagne

Procédures d'évaluation de la conformité

Contrôle de production interne: module A (2006/42/CE)
Examen de type CE: module B (2014/30/UE)
Contrôle interne de la production avec évaluation de la fiche technique et vérification périodique (2000/14/CE)

Organisme notifié impliqué (2000/14/CE)
Nom: SNCH
Adresse: 11, Route de Sandweiler 5230 Sandweiler, Luxembourg
N° de certificat/Documentation technique: SNCH*2000/14*2005/88*3164*01/TCLM331-01

EU01a - 1
Declaración de conformidad de la UE

Identificación del producto:
Producto: Cortacésped
Marca: BARONESS
Tipo: LM331
Versión: 10103

N° de serie inicial: LWA 96.68 dB
Nivel de potencia sonora garantizado: LWA 103 dB
Fabricante: Kyoeisha Co., Ltd.
Dirección: 1-26 Miyuki-cho, Toyokawa, Aichi-pref., Japón

Cumple las siguientes Directivas:
2006/42/CE Marcaúnica (MI)
2014/30/UE Compabilidad electromagnética (EMC)
2000/14/CE Emisiones sonoras de máquinas de uso al aire libre

Se ha diseñado y fabricado utilizando las siguientes especificaciones:
ISO 5395-1 : 2013 (2006/42/CE)

Documentación técnica:
Nombre del responsable: Kyoeisha Co., Ltd.
Dirección: 1-26 Miyuki-cho, Toyokawa, Aichi-pref., Japón

Compilador del archivo técnico (2006/42/CE):
Friedrich E. Barthels Nachf. Gloocklin KG (GmbH & Co.)
Gerhard-Falk-Str. 1 21035 Hamburg Alemania

Organismo notificado implicado (2000/14/CE):
Nombre: SNCH
Dirección: 11, Route de Sandweiler 5230 Sandweiler Luxemburgo
SNCH*2000/14*2005/88*3164*01*TCML331-01

EU-Konformitätserklärung

Produktbeschreibung:
Produkt: Rasenmäher
Marke: BARONESS
Modell: LM331
Version(en): Nicht zutreffend 10103

Startflankenummer:

Gesamter Schallleistungspegel:
LWA 96.68 dB
LWA 103 dB

Garantieller Schallleistungspegel:

Hersteller Name: Kyoeisha Co., Ltd.
Adresse: 1-26 Miyuki-cho, Toyokawa, Aichi-pref., Japan

Entsprechend den folgenden Richtlinien:
2006/42/EG Maschinennrichtlinie
2014/30/UE Elektromagnetische Verträglichkeit (EMV)
2000/14/EG Geräuschemission von im Freien betriebenen Geräten

Unter Anwendung der folgenden Bestimmungen entwickelt und hergestellt:
ISO 12100 : 2010 (2006/42/EG)
ISO 5395-1 : 2013 (2006/42/EG)
ISO 5395-3 : 2013 (2006/42/EG)
ISO 14982 : 1898 (2014/30/UE)

Technische Dokumentation:
Name des Halter: Kyoeisha Co., Ltd.
Adresse des Halter: 1-26 Miyuki-cho, Toyokawa, Aichi-pref., Japan

Name: Friedrich E. Barthels Nachf. Gloocklin KG (GmbH & Co.)
Adresse: Gerhard-Falk-Str. 1 21035 Hamburg Deutschland

Konformitätsbewertungsverfahren:
Interne Produktsicherheitskontrolle: Modul A (2006/42/EG)
EG-Baumusterprüfung: Modul B (2014/30/EUE)

Beteiligte benannte Stelle (2000/14/EG):
Name: SNCH
Adresse: 11, Route de Sandweiler 5230 Sandweiler Luxemburgo
Bescheinigung/Technische Dokumentation Nr.: SNCH*2000/14*2005/88*3164*01**TCML331-01
EU-försäkran om överensstämmelse

Produkttitellena
Produkt: Gräsklippare
Märke: BARONESS
Nummer: LM331
Exakt: Ej aktuell
Serienummer: 10103
Uppnätt lydnivå: LWA 98.68 dB
LWA 103 dB
Tillverkare: Kyoeisha Co., Ltd.
Adress: 1-26 Miyuki-cho, Toyokawa, Aichi-pref., Japan

Uppfyller följande direktiv
2006/42/EG Maskindirektivet
2014/30/EU Elektromagnetisk kompatibilitet (EMC)
2000/14/EG Burrenmisjon från utomhusutrustning

Följande kravspecifikationer har förts vid konstruktion och tillverkning
ISO 12100: 2010 (2006/42/EG)
ISO 5395-1: 2013 (2006/42/EG)
ISO 5395-3: 2013 (2006/42/EG)

Teknisk dokumentation
Innehavarens namn: Kyoeisha Co., Ltd.
Adresse: 1-26 Miyuki-cho, Toyokawa, Aichi-pref., Japan
Den tekniska filen(2006/42/EG) har tagits fram av
Nämnd: Friedrich E. Barthels Nachf. Gloczkín KG (GmbH & Co.)
Adresse: Gerhard-Falk-Str. 1 21035 Hamburg Tyskland

Förordning för bedömning av överensstämmelse
Intern produktionskontroll: Modul A (2006/42/EG)
EG-typprovning: Modul B (2014/30/EU)
Intern kontroll av produktion med fastställande av teknisk dokumentation och periodiska kontroller (2000/14/EG)
Annat organ (2000/14/EG)
Nämnd: SNCH
Adresse: 11, Route de Sandweiler 5230 Sandweiler Luxembourg
Certifikat/teknisk dokumentation nummer: SNCH*2000/14*2005/88°3164°01/TCLM331-01

EU-overensstemmelseverklaring

Produkttitellena
Produkt: Planeklippare
